
This Signetics Memory Module provides 256K bytes of dynamic random access memory, plus parity protection.

Equipment and system design often require the use of a wide variety of integrated circuits in order to obtain optimum performance. One way for an engineer to be certain that he hasn't overlooked the best device for his application is to refer to the pages of IC MASTER.

Surveys conducted by IC MASTER, integrated circuit manufacturers, and independent research agencies confirm that four out of five IC MASTER users have specified one or more products as the result of using IC MASTER.

Device No.	Description
74LS00	Quadruple 2-Input NAND Gate
74LS08	Quadruple 2-Input AND Gate
74LS04	Hex Inverter
74LS20	Dual 4-Input NAND Gate
74LS32	Quadruple 2-Input OR Gate
74LS37	Quadruple 2-Input NAND Buffer
74LS24	Schmitt Trigger
74LS74	Dual D-Type Edge-Triggered Flip-Flop
74LS132	Quadruple 2-Input Schmitt Trigger
74LS112	Dual J-K Edge-Triggered Flip-Flop
74LS10	Triple-3-Input NAND Gate
74LS244	Octal Buffer/Line Driver
74LS645	Octal Bus Transceiver
AM25LS2521	8-Bit Equal-to Comparator
74S38	AND/NAND Gate
N7411	Triple-3-Input AND Gate
N74S40	Dual 4-Input NAND Buffer
TMS4164	64K Dynamic RAM
7641	512 x 8 PROM
7642	1K x 4 PROM

TMS99000 16-Bit Microprocessor Family

The TI 99000 Family provides a choice of high-performance, and single-chip microprocessors and microcomputers. Each is unique. An advanced architecture, bus structure, and instruction set common to the entire Family provide design ease and flexibility, high performance, economy, and other benefits for both designer and user. Fully supported by software, software development systems, and TI's technical assistance, these circuits are available now. The key microprocessors of the 99000 Family include:

TMS9900 MICROPROCESSOR. The TMS9900, introduced in 1977, is the world's first 16-bit microprocessor. The TMS9900 is backed by an established base of software, design support, and AMPL development systems. Key features include: 16-bit instruction word; 8- and 16-bit data format; bidirectional parrallel data bus; direct addressing of up to 64K bytes; 69 instructions, including multiply and divide; 7 addressing modes; 17 prioritized interrupts; and a unique bit serial I/O is addition to general memory-mapped I/O. For military applications, the SBP9989 provides the operating temperature range and radiation tolerance of the SBP9900A with the added feature of twice the throughput of the SBP9900A.

TMS9980A AND TMS9981 MICROPROCESSORS. Lower-cost versions of the TMS9900 featuring an 8-bit memory data bus for smaller systems needing 9900 16-bit capabilities. TMS9980A and TMS9981 are similar, except for minor differences in supply voltages and clock-drive requirements.

TMS9940 MICROCOMPUTER. The TMS9940 is the world's first single-chip 16-bit microcomputer featuring 2048 bytes of ROM and 256 bytes of RAM on-chip. Key features include: 9900 CPU architecture and instruction set; 4 prioritized interrupts; on-chip timer/event counter; and 32 general purpose I/O ports.

TMS9995 MICROPROCESSOR. Contains a performance enhanced CPU, on-chip 256 bytes of RAM, and external memory and I/O bus to bring speed and low chip count for systems requiring both high performance and low system cost. Key Features include 9900 instruction set including signed multiply and divide; 256 bytes of on-chip RAM; on-chip 16-bit interval timer/event counter; on-chip I/O mapped flag register; 7 prioritized interrupts; 64K bytes memory addressability; and an on-chip 12-MHz clock generator.

TMS99000 MICROPROCESSORS. The 99000 Family is the third and newest family of advanced 16-bit microprocessors from TI. With performance 5 to 7 times that of the TMS9900, the 99000 Family features 84 powerful instructions that are a direct superset of the 9900. With a fast, 167 nanosecond cycle time, the 99000 family of processors can perform a memory-to-memory move in just 0.8 microseconds. Also new for the 99000 Family is both parallel and serial I/O address space for flexibility in configuring input/output devices. The first member of the 99000 Family is the TMS99105 Advanced 16-bit Microprocessor. The TMS99105 supports all the features of the 99000 Family. The TMS99110 Advanced 16-bit Microprocessor includes all the features of the TMS99105 with the addition of the 12 single-precision floating point instructions.

TMS99000 Family Instruction Set

MNEMONIC	DESCRIPTION
A	Add Word (16-bit)
AB	Add Byte (8-bit)
ABS	Absolute Value
AI	Add Immediate
AM	Add Multiple (32-bit)
ANDI	AND Immediate
B	Branch
BIND	Branch Indirect
BL	Branch and Link
BLWP	Branch and Load Workspace Pointer
BLSK	Branch Immediate and Push Link to Stack
C	Compare Word
CB	Compare Byte
CI	Compare Immediate
CKOF	External Clock Off
CKON	External Clock On
CLR	Clear Word
COC	Compare Ones Corresponding
CZC	Compare Zeros Corresponding
DCA**	Decimal Correct Add
DCS**	Decimal Correct Subtract
DEC	Decrement
DECT	Decrement By Two
DIV	Unsigned Divide
DIVS	Signed Divide
IDLE	Idle Processor
INC	Increment
INCT	Increment By Two
INV	Invert
JXX	Jump (1-unconditional, 12-conditional)
LDD*	Long Distance Destination (Memory Mapper Control)
LDCR	Load Communications Register Unit (I/O)
LDS*	Long Distance Source (Memory Mapper Control)
LI	Load Workspace Register Immediate
LIMI	Load Interrupt Mask Immediate
LREX	Load External
LST	Load Status Register
LWP	Load Workspace Pointer

MNEMONIC	DESCRIPTION
LWPI	Load Workspace Pointer Immediate
MOV	Move Word
MOVB	Move Byte
MPY	Multiply
MPYS	Signed Multiply
NEG	Negate
ORI	OR Immediate
RSET	External Reset
RTWP	Return to Workspace Pointer
S	Subtract (16-Bit)
SB	Subtract Byte (8-Bit)
SBO	Set Bit to One (I/O)
SBZ	Set Bit to Zero (I/O)
SETO	Set Word to Ones
SLA	Shift Left Arithmetic
SLAM	Shift Left Arithmetic Multiple (32-Bit)
SM	Subtract Multiple (32-Bit)
SRA	Shift Right Arithmetic
SRAM	Shift Right Arithmetic Multiple (32-Bit
SRC	Shift Right with Carry
SRL	Shift Right Logical
SOC	Set Ones Corresponding Word
SOCB	Set Ones Corresponding Byte
STCR	Store Communication Register Unit (I/O)
STST	Store Status
STWP	Store Workspace Pointer
SWPB	Swap Bytes
SZC	Set Zeros Corresponding Word
SZCB	Set Zeros Corresponding Byte
TB	Text Bit (I/O)
TCMB	Test and Clear Memory Bit
TMB	Test Memory Bit
TSMB	Test and Set Memory Bit
X	Execute
XOP	Extended Operation (Software Context Switch-16 XOP's)
XOR	Exclusive-OR

*Implemented in TMS99110A only.
**TMS9940 only.

TMS99110 FLOATING POINT FUNCTIONS

AR	Add Real	CR	Compare Reals
SR	Subtract Real	CIR	Convert Integer to Real
MR	Multiply Real	CER	Convert Extended Integer to Real
DR	Divide Real	CRI	Convert Real to Integer
LR	Load Real	CRE	Convert Real to Extended Integer
STR	Store Real	MM	Multiply Multiple (32 bit integer × 32 bit integer = >64 bit general source/destination)
NEGR	Negate Real

TMS99000 Family of Advanced Peripherals

The 99000 Family contains a wide selection of system support circuits used to easily and cost effectively perform peripheral and interface functions, such as data communications, memory functions, special signal processing, and display. Included are controllers, latches, encoders, and others. The bus structure, architecture, I/O features, and other characteristics of these peripherals and interface circuits are compatible with other members of the 99000 Family.

As additional peripheral and interface circuits are added to the Family, they will be compatible with existing members.

TMS7000 8-Bit Microcomputer Family

The first microprogrammable 8-bit microcomputer

Setting new VLSI standards in cost, performance, and flexibility with unique chip design and rich instruction set...

The TMS7000 is the newest, most cost-effective system solution for 8-bit microcomputer applications, such as computer peripherals, telecommunications, industrial control, automotive, appliances, toys, and games. The significantly smaller chip size of the TMS7000 means lower cost. The singular VLSI design concept provides the ability to add family members quickly and easily by simply inserting new areas on the chip for additional memory capacity or functions.

The TMS7000 instruction set, variety of addressing modes, and unequaled architecture maximize throughput while minimizing memory requirements. The instruction set contains the usual byte-oriented instructions, and in addition offers multiplication, double precision arithmetic, and single- and multiple-bit testing, as well as BCD arithmetic.

At the heart of the TMS7000 family is TI's newly developed STRIPCHIP ARCHITECTURE TOPOLOGY (SCAT). The TMS7000 is a unique memory-like array-structured chip, resulting in a significant size reduction. Smaller chips equate to lower prices.

Another feature of SCAT is the control ROM used to define the instruction set. This feature allows customizing of the TMS7000 instruction set.

Five memory expansion modes allow trade off of I/O pins for easy interface to a wide range of external memory and peripheral devices. Up to 64K may be addressed for increased configuration flexibility.

TMS1000 4-Bit Microcomputer Family

For high-volume low-cost applications, no other microcomputer family has enjoyed the continued popularity of the TMS1000 family of 4-bit single-chip microcomputers. Since its introduction in 1974, the TMS1000 family has become the world's most widely used microcomputer, with over 80 million units shipped for applications as diverse as microwave ovens, electronic toys and games, television tuners, dishwashers, radios, scanners, and security systems.

Available in PMOS, CMOS, and LMOS (Low-power PMOS) processes with wide variations of ROM/RAM, package sizes, I/O, output drive capability, and clock speeds, the family offers well over 40 base-sets to fit into various end-equipment applications at the lowest system cost. The unique functionality of the microcomputer is determined by the customer-specified software that is mask-programmed into the ROM at the factory.

Several years of learning curve experience have resulted in continued unit cost reduction with significantly improved reliability.

The TMS1000 family is well supported with extensive design, test and application support. A complete line of development tools in the form of ROMless evaluator chips, System Evaluator boards, and AMPL 1000 systems (consisting of Editor, Assembler, In-Circuit Emulators, and diagnostics) are available to the user to develop his custom software.

There is an on-going effort in further cost-reduction and reliability improvement and several new additions to the family are planned in the future to meet future user product and application requirements.

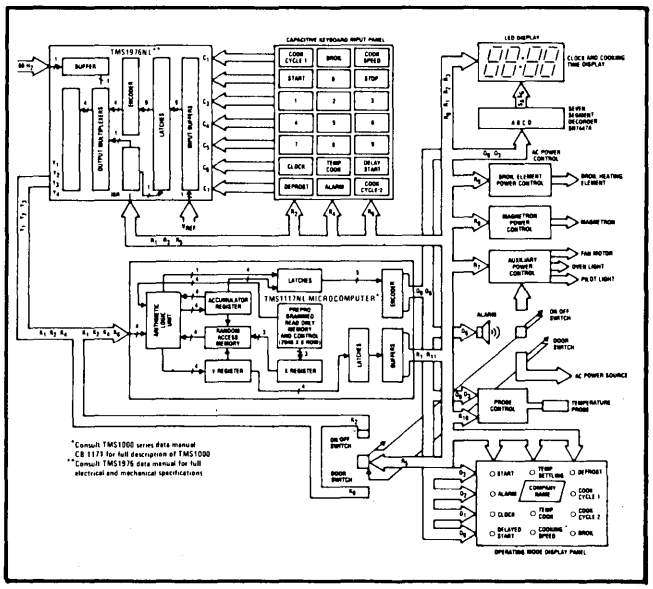
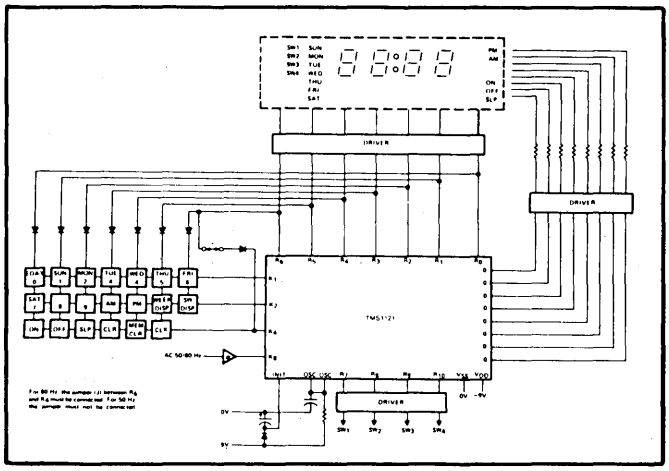
Firmware Products

TI firmware products are preprogrammed versions of the TMS1000 Family intended for specific applications. These products use standard TMS1000 chips and TI-developed software algorithms. So, there are no software development expenses. Products are available off-the-shelf. Some have built-in test routines. Time to production is minimized. Currently available firmware products include:



TMS1117NLP APPLIANCE CONTROLLER/TIMER
WITH TMS1976 CAPACITIVE TOUCH CHIP



TMS1121NLL UNIVERSAL TIMER BLOCK DIAGRAM

TMS1121NLL—Universal Timer Controller
User programmable microcomputer which drives a 4-digit LED clock display and functions as a time-of-day, day-of-week controller with up to 18 programmable timer sets.

TMS1020NLL—Programmable Timer Controller
Real-Time Clock/Timer whose output lines can control various outputs in sequential mode.

TMS2372NLL—User Programmable Climate Controller
Controls the temperature of 1 or 2 areas and drives a 4-digit UF display that shows the temperature and time-of-day.

TMS1018NLL—Arithmetic Processor
Performs arithmetic operations on BCD numbers up to 10 digits including 1/x and x^2, and performs simple control functions (keyboard interface).

TMS0117NLP—Arithmetic Processor
Performs arithmetic operations on BCD numbers up to 10 digits and interfaces with other processors.

TMS1117NPL—User Programmable Appliance Controller
Decodes operator inputs from a capacitive-touch keyboard and translates these inputs into specific appliance control signals.

TMS1000 Family Development Systems

The TMS1000 family of microcomputers are supported by the AMPL1000 line of development systems. The AMPL1000 system can be broken into software and hardware components. The hardware consists of an emulator buffer with specific SE emulator boards, while the software consists of a completely self-contained editor, assembler, emulator control, and diagnostics.

Let Your Product Speak For Itself

Whether it's appliances, automotive consoles, transaction terminals, office systems, telecommunications, robotics, or electronic toys and games, TI's Solid State Speech ™ technology promises to have a dramatic impact on design, now, and for generations to come.

TI's Solid State Speech technology provides a revolutionary approach to the design of man-machine interfaces. A wide variety of applications can benefit from this technology due to the high intelligibility, reliability, and low cost of Solid State Speech reproduction.

The development of Solid State Speech technology at Texas Instruments began with the analysis of the human mechanisms for production and perception of speech. Based on the mechanisms of natural speech production, a model of the speech production process was implemented using digital signal processing techniques. This model is the basis for TI's Solid State Speech products.

The speech recording/processing begins by recording actual human speech, extracting energy and pitch information, and then using Linear Predictive Coding (LPC) analysis to produce data suitable for the digital speech model. These techniques faithfully preserve the character of the speaker's voice, including intonation, accent, dialect, and pitch in any language. Whole phrases and sentences, as well as single words and sounds, can be reproduced, preserving authentic human inflections. The result is more lifelike, natural sounding speech.

Value to the user of TI's LPC technique is its modest memory requirement compared to other approaches. Brute-force storage of speech signals can be accomplished by sampling and converting speech at an 8 to 10-kilohertz clock rate. This results in a digital data rate of 100,000 bits per second of speech. Pulse-coded modulation (PCM) codecs and companding techniques have found acceptance in new, all-digital telecommunications systems. However, their data rate of 64,000 bits per second is still too high for many applications.

Linear Predictive Coding provides speech quality comparable to other techniques, yet it only requires an average data rate of about 1,600 bits per second. With the advent of 128K-bit and larger storage devices, LPC packs minutes of high-quality speech into memories that would hold only one or two seconds of speech using other techniques. To illustrate, a speech reproduction of the words "Texas Instruments" requires approximately 90 times as many bits using digitized speech techniques as it requires with LPC. Using these techniques a single 128K-bit ROM can hold as many as 200 words.

Voice Synthesis Processors (VSP)

Speech encoding on TI Voice Synthesis Processors is achieved through LPC coding. Codes for twelve synthesis parameters (pitch, energy, and 10 filter coefficients) serve as inputs to the VSP. After being decoded by the VSP, these codes represent a time-varying description of the LPC model of the original voice.

Inputs to the VSP's digital filter takes two forms: periodic and random. The periodic inputs are used to reproduce voiced sounds which have a definite pitch, such as vowel sounds or voiced fricatives (Z,B,D). A random input models unvoiced sounds such as S, F, T, and SH. Separate models generate the voiced and unvoiced excitations. Output from the digital filter drives a digital-to-analog converter, which in turn drives a speaker.

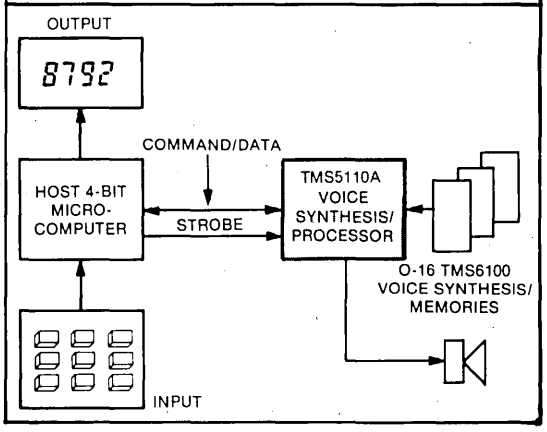
With one TMS6100 128K-bit ROM, a TMS5000 Series VSP can produce more than 100 seconds of speech, or about 200 synthesized words. A single TMS5110A or TMS5220 VSP can support up to 16 128K-bit VS Memories, or approximately 3200 words of speech. In addition, the TMS5220 is capable of tapping host storage or off-line storage to produce virtually unlimited vocabularies.

TMS5110A VOICE SYNTHESIS PROCESSORS

Features

- Interfaces easily to 4-bit microprocessors, such as TI's TMS1000 Family of microcomputers
- A complete voice synthesis system can be designed with 3 chips: TMS5110A VSP, TMS6100 VSM and a TMS1000 microcomputer
- Directly addresses up to 16 TMS6100 VS Memories (128K bits each) for up to 3200 words of speech
- Ideal for high-volume, low-cost applications
- Low average data rate: 1600 bits/second
- TMS5110A can process male and female voices, plus tones, chimes and sound effects.

TMS5100/10 VS PROCESSOR SYSTEM ARCHITECTURE

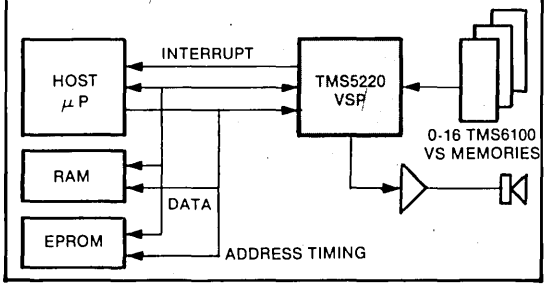


TMS5220 VOICE SYNTHESIS PROCESSOR

Features

- High-quality voice synthesis for microprocessor-based system
- Low average data rate: 1600 bits/second
- Compatible with 8 and 16-bit microprocessors
- Commands supplied over standard 8-bit data bus
- Speech data can be stored in up to 16 TMS6100 Series VS Memories, in host system storage, or off-line in disk
- Interrupt-driven service request capability
- On-chip FIFO (16-byte) buffers two frames of speech data when coming from host processor
- Can process male and female voices plus tones, chimes and sound effects
- Capable of stringing basic 'allophone' sounds together to form words and phrases

TMS5220 VS PROCESSOR SYSTEM ARCHITECTURE



Voice Synthesis Processors Summary

Voice Synthesis Memories (VSM)

TMS6100 VOICE SYNTHESIS MEMORY

- Low-cost, 128K-bit ROM

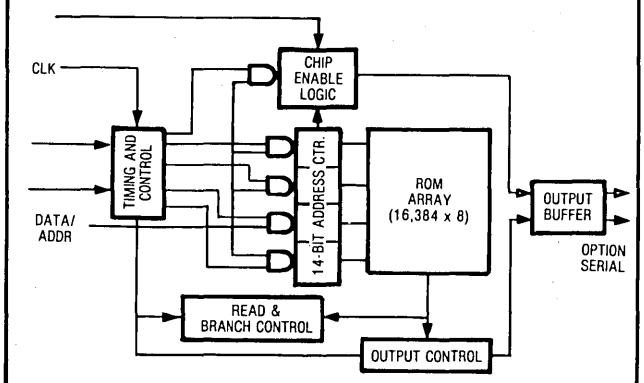
TMS6125 VOICE SYNTHESIS MEMORY

- Low-cost, 32K-bit ROM

FEATURES:

- Optimized interface for use with TMS5110 series and TMS5220 series voice synthesis processors
- On-chip address decode logic – no address decoding required for up to 16 VSM's with the TMS6100s or up to 4 VSM's with the TMS6125s
- On-chip memory address register – autoincrements through speech data until stopped by VSP
- Look-up and branch capability allows vocabulary-independent access to speech data on chip

TMS6100 128K VS MEMORY BLOCK DIAGRAM



•SIMPLE, DEDICATED INTERFACE TO ALL TI VSPs.

Voice Synthesis Memory Summary

FEATURES	DEVICE NUMBER	
	TMS6100	TMS6125
Memory Storage (Bits)	128k	32k
DIP Package	28 pin	16 pin
Oscillator Clock	External	Internal/External
Chip Select Bits	4	2
Address Bits	14	12
Serial Option	Yes	Yes
4-Bit Parallel Option	Yes	Yes
Operating Voltage (Volts)	−9	−9
Access Time (μs)	2	2
Clocking Frequency (kHz)	160	160
Technology	PMOS	PMOS

Speech Library Service

FEATURES:

- Pre-encoded words and phrases available
- Low-cost means of obtaining speech data
- Much faster turnaround than with custom processing
- Adequate quality for prototyping and many applications
- Available through TI Regional Technology Centers

Preprogrammed Speech Vocabulary ROMS

VOCABULARY ROMs (VROMs)

FEATURES:

- Preprogrammed vocabularies for industrial, consumer, and military markets
- Male or female voice intonations offered
- Used with TI's TMS5110A and TMS5220 Voice Synthesis Processors
- Very low-cost synthesized speech
- Ideal for industrial use, low-volume applications, evaluation, and prototyping

Preprogrammed Vocabulary ROMS

DEVICE NUMBER	TYPE OF VOCABULARY	VOICE TYPE OPTION	NO. OF WORDS	VSP INTERFACE	NO. OF BITS
VM61002	Industrial	Male	204	TMS5110A	128K
VM61003	Industrial	Male	206	TMS5220	128K
VM61004	Time/Weather	Male	139	TMS5220	128K
VM61005*	Military	Male	148	TMS5220	128K
VM61006	Avionics	Male	119	TMS5220	128K
VM71003	Industrial	Male	50	TMS5110A	32K
VM71004	Numeric/Time	Male	35	TMS5110A	32K
VM71005	Numeric/Time	Female	34	TMS5220	32K

NOTE: All devices have an operating voltage of −9V
* To have a complete avionics vocabulary, the TMS61003, 004, and 005 should be used together

Example:

The VM71004 is a TMS6125 voice synthesis memory precoded for a male voice with a vocabulary of 50 words. Each of the words, syllables, and selected letters of the alphabet is accessed individually and then concatenated to form phrases and sentences.

TM990 Family of Microcomputer Modules

The TM990 Series provides an extensive choice of preassembled, high-performance, 16 bit microcomputer modules that save design and development time, cut the number of system components, reduce costs, and improve reliability. Each module is a single, pretested, ready-to-plug-in board. The series includes: complete CPU modules with on-board memory and I/O interface; memory and I/O expansion modules; data entry and display modules; software development modules, industrial AC and DC I/O modules; A/D and D/A interface modules; a floppy disk controller; a speech module; and industrial communication modules. In addition, OEM card cages, cables, connectors, extender, and prototyping boards are available.

All TM990 modules are compatible with other members of TI's 9900 Family of microprocessors and microcomputers, which allows easy conversion to a dedicated-component solution if your application warrants.

Reliability for Harsh Industrial Environments—All components used in TM990 module construction are subjected to TI's strict quality assurance criteria. All assembled modules go through a computer-controlled test station providing verification of product compliance with specifications. All modules are dynamically exercised in a severe environment chamber that cycles products through a 25-70°C temperature range; burn-in time varies from eight hours to four days. Prior to shipping, all modules are system tested for strict compliance to system specifications and quality assurance criteria. TM990 modules are guaranteed over the industrial 0°C to 70°C operating temperature range.

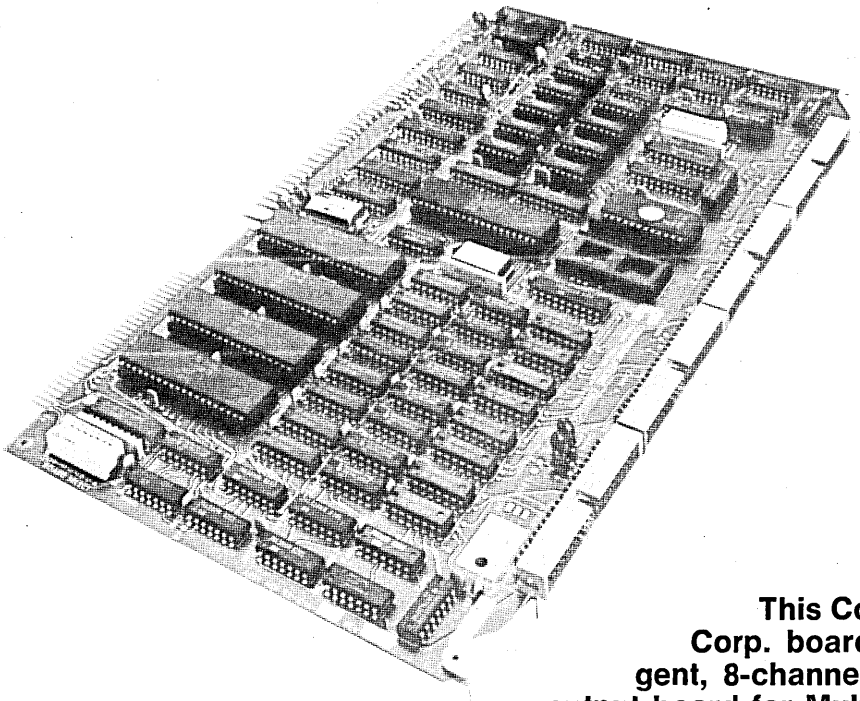
For Key Data On Every IC On This Board, The Place To Look Is...



This Codata Systems Corp. board is an intelligent, 8-channel serial input/output board for Multibus systems.

Equipment and system design often require the use of a wide variety of integrated circuits in order to obtain optimum performance. One way for an engineer to be certain that he hasn't overlooked the best device for his application is to refer to the pages of IC MASTER.

Surveys conducted by IC MASTER, integrated circuit manufacturers, and independent research agencies confirm that four out of five IC MASTER users have specified one or more products as the result of using IC MASTER.

Device No.	Description
AM25LS2521	8-Bit, Equal-to Comparator
AM26LS29	Line Driver, Single-Ended
AM26LS32	Line Receiver, Differential
74LS02	Quad 2-Input NOR Gate
74LS08	Quad 2-Input AND Gate
74LS32	Quad 2-Input OR Gate
74LS74	Dual D-Type Positive Edge Triggered Flip-Flop with Preset and Clear
74LS138	3 Line to 8 Line Decoder/Demultiplexer
74LS164	8-Bit Gated Serial-In, Parallel-Out Shift Register
74LS244	Octal Bus Driver (Schmitt trigger) Non-Inverting, 3-State, Complementary Control
74LS273	Octal D-Type Edge-Triggered Flip-Flop
MBM2716	Fujitsu 248 by 8 PROM
SN74LS04	Hex Inverter
SN74LS133	13-Input NAND Gate
SN74S240	Octal Buffer/Line Driver/Line Receiver Inverted 3-State Outputs
Z80A	Zilog 8-Bit Microprocessor
Z8530	Zilog Serial Communications Controller

WD1014 Error Detection and Support Logic

FEATURES

- 32 BIT ECC POLYNOMIAL
- SINGLE BURST ERROR CORRECTION TO 11 BITS
- MULTIPLE BURST DETECTION
- 5 MBIT DATA TRANSFER RATE
- OPTIMIZED FOR 128, 256, OR 512 BYTE SECTOR SIZES
- SUPPORTS READ/WRITE LONG FEATURE
- SINGLE +5V SUPPLY
- 8 BIT I/O DATA BUS

GENERAL DESCRIPTION

The WD1014 Error Detection and Support Logic (EDS) provides the user with easy to implement ECC and support logic in design of a Winchester Controller. In addition to providing ECC generation and checking, the EDS contains three 8-bit registers, three modulo-2 counters and several latches that can be used to provide real-time control functions for Winchester operation.

The WD1014 is designed to operate as part of the WD1002 Winchester/Floppy controller and is not meant as a stand-alone general purpose device unless it is used in the same way.

The ECC polynomial is the same as that implemented in the WD1100-06. A 2-bit serial method is implemented and no CRC is provided. This provides for faster operation. 11-bit single burst errors can be corrected and double bursts to 4 bits can be detected depending on the correction span selected.

The WD1014 is fabricated in N-Channel silicon gate technology and is available in a ceramic 40-pin dual-in-line package.

WD1100 Series Winchester Controller Chips

DESCRIPTION

The WD1100 Chip series provides a low cost alternative for developing a Winchester Controller. These devices have been designed to read and convert an MFM data stream into 8-bit parallel bytes. During a write operation, parallel data is converted back into MFM to be written on the disk. Address Marks are generated and detected while CRC bytes can be appended and checked on the data stream. The WD1100 is fabricated in N-channel silicon gate technology and is available in a 20-pin Dual-In-Line package.

- WD1100-01 SER/PARALLEL CONVERTER
- WD1100-02 MFM GENERATOR
- WD1100-12 IMPROVED MFM GENERATOR
- WD1100-03 AM DETECTOR
- WD1100-04 CRC GENERATOR/CHECKER
- WD1100-05 PAR/SERIAL CONVERTER
- WD1100-06 ECC/CRC LOGIC
- WD1100-07 HOST INTERFACE LOGIC
- WD1100-09 DATA SEPARATION SUPPORT LOGIC

FEATURES

- SA1000/ST506 COMPATIBLE
- SINGLE 5V SUPPLY
- TRI-STATE DATA LINES
- 5 MBITS/SEC TRANSFER RATE
- SIMPLIFIED INTERCONNECT

APPLICATIONS

Winchester Controllers For:

SHUGART ASSOCIATES

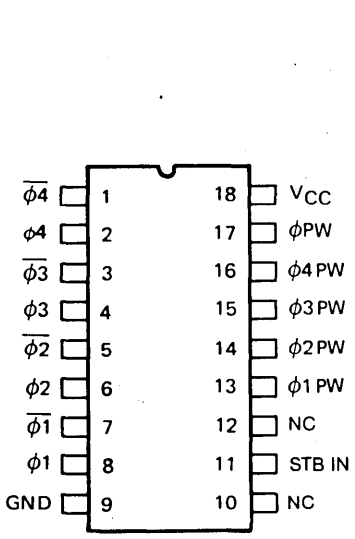
WD2143-03 Four Phase Clock Generator

FEATURES

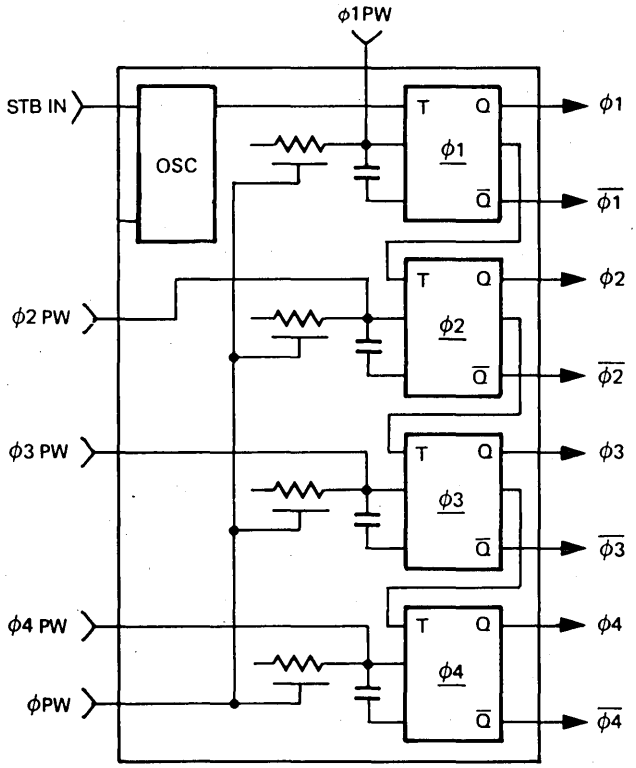
- IMPROVED VERSION OF WD2143-01
- TRUE AND INVERTED OUTPUTS
- SINGLE 5 VOLT SUPPLY
- TTL COMPATABLE
- ON CHIP OSCILLATOR
- TTL CLOCK INPUT
- TTL CLOCK OUTPUTS
- PROGRAMMABLE PULSE WIDTHS
- PROGRAMMABLE PHASE WIDTHS
- NO EXTERNAL CAPACITOR

GENERAL DESCRIPTION

The WD2143-03 Four-Phase Clock Generator is a MOS/LSI device capable of generating four phase clocks. The output pulse widths are controlled by tying an external resistor to the proper control inputs. All pulse widths may be set to the same width by tying the ϕPW line through an external resistor. Each pulse width can also be individually programmed by tying a resistor through the appropriate ϕ1PW—ϕ4PW control inputs.



PIN DESIGNATION



BLOCK DIAGRAM

DEVICE OPERATION

Each of the phase outputs can be controlled individually by typing an external resistor from ϕ1PW-ϕ4PW to a +5V supply. When it is desired to have ϕ1 through ϕ4 outputs the same width, the ϕ1PW-ϕ4PW inputs should be left open and an external resistor tied from the ϕPW (Pin 17) input to +12V.

STROBE IN (pin 11) is driven by a TTL square wave. Each of the four phase outputs provide both true and inverted signals, capable of driving 1 TTL load each.

WD1691 Floppy Support Logic (F.S.L.)

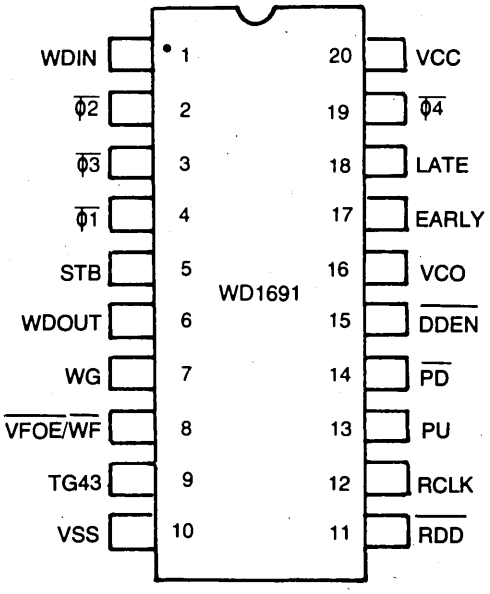
FEATURES

- DIRECT INTERFACE TO THE FD179X
- ELIMINATES EXTERNAL FDC LOGIC
- DATA SEPARATION/RCLK GENERATION
- WRITE PRECOMPENSATION SIGNALS
- VFOE/WF DEMULTIPLEXING
- PROGRAMMABLE DENSITY
- 8" OR 5.25" DRIVE COMPATIBLE
- ALL INPUTS AND OUTPUTS TTL COMPATIBLE
- SINGLE +5V SUPPLY

GENERAL DESCRIPTION

The WD1691 F.S.L. has been designed to minimize the external logic required to interface the 179X Family of Floppy Disk Controllers to a drive. With the use of an external VCO, the WD 1691 will generate the RCLK signal for the WD179X, while providing an adjustment pulse (PUMP) to control the VCO frequency. VFOE/WF de-multiplexing is also accomplished and Write Precompensation signals have been included to interface directly with the WD2143 Clock Generator.

The WD1691 is implemented in N-MOS silicon gate technology and is available in a plastic or ceramic 20 pin dual-in-line package.



WD1691 PIN DESIGNATION

PRELIMINARY

WESTERN DIGITAL
CORPORATION

WD9216-00/WD9216-01
Floppy Disk Data Separator — FDDS

FEATURES

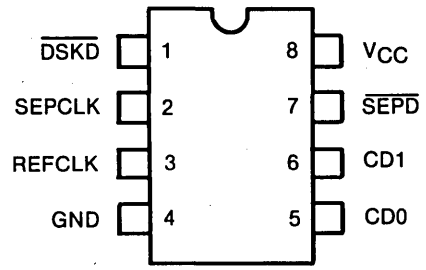
- PERFORMS COMPLETE DATA SEPARATION FUNCTION FOR FLOPPY DISK DRIVES
- SEPARATES FM OR MFM ENCODED DATA FROM ANY MAGNETIC MEDIA
- ELIMINATES SEVERAL SSI AND MSI DEVICES NORMALLY USED FOR DATA SEPARATION
- NO CRITICAL ADJUSTMENTS REQUIRED
- COMPATIBLE WITH WESTERN DIGITAL 179X, 176X AND OTHER FLOPPY DISK CONTROLLERS
- SMALL 8-PIN DUAL-IN-LINE PACKAGE
- +5 VOLT ONLY POWER SUPPLY
- TTL COMPATIBLE INPUTS AND OUTPUTS

GENERAL DESCRIPTION

The Floppy Disk Data Separator provides a low cost solution to the problem of converting a single stream of pulses from a floppy disk drive into separate Clock and Data inputs for a Floppy Disk Controller.

The FDDS consists primarily of a clock divider, a long-term timing corrector, a short-term timing corrector, and reclocking circuitry. Supplied in an 8-pin Dual-In-Line package to save board real estate, the FDDS operates on +5 volts only and is TTL compatible on all inputs and outputs.

The WD9216 is available in two versions; the WD9216-00, which is intended for 5¼" disks and the WD9216-01 for 5¼" and 8" disks.



PIN DESIGNATION

ADVANCE INFORMATION

WD1050 SMD Controller/Formatter

FEATURES

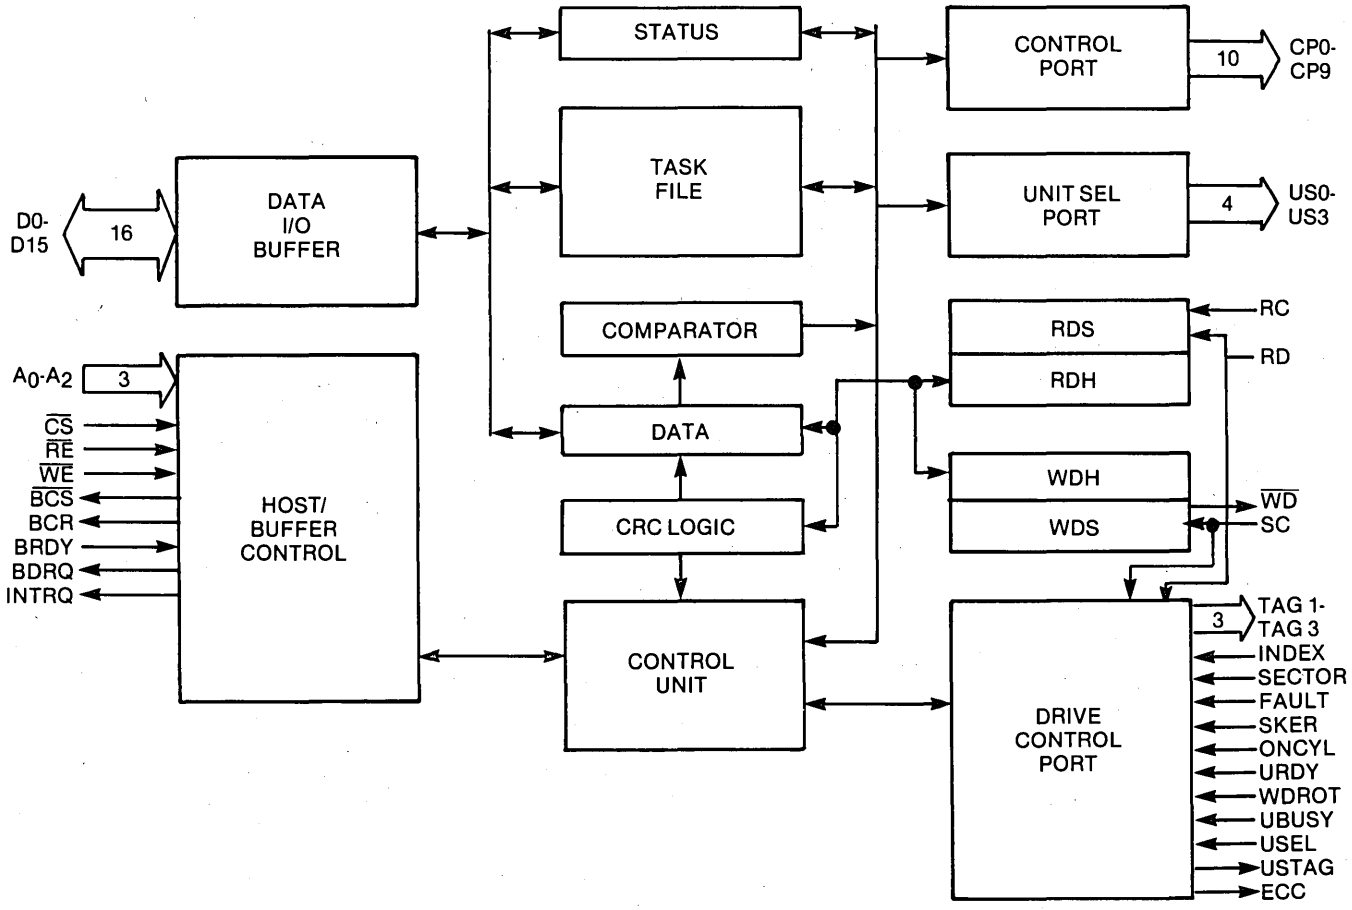
- 16 BIT HOST INTERFACE
- 9.677 MBITS/SEC DATA RATE
- SINGLE/MULTIPLE SECTOR TRANSFERS
- HARD SECTOR FORMAT
- TTL COMPATIBLE INPUT/OUTPUTS
- SINGLE 5V SUPPLY
- 64 PIN JEDEC CHIP CARRIER PACKAGE
- COMPATIBLE WITH SMD, MMD, FHT, LMD, AND CMD FAMILIES

DESCRIPTION

The WD1050 SMD controller/formatter is a MOS/LSI device designed to interface an SMD compatible rigid disk drive to a host processor. The device is compatible with all rigid disk drives adhering to Control Data Corporation's flat cable interface for SMD, MMD, FHT, FMD, LMD and CMD families (CDC specification 64712400 Rev H). It is TTL compatible on all inputs and outputs, with interface capability for 8 or 16 bit data busses.

The WD1050 contains a powerful set of macro-commands for read/write and control functions. An internal 16 bit task file is used to process a selected command based upon parameter information in the file.

The WD1050 operates from a single +5V supply and is available in a 64 pin JEDEC chip-carrier package.



BLOCK DIAGRAM

WD279X-02 Floppy Disk Formatter/Controller Family

FEATURES

- ON-CHIP PLL DATA SEPARATOR
- ON-CHIP WRITE PRECOMPENSATION LOGIC
- SINGLE +5V SUPPLY
- ACCOMMODATES SINGLE AND DOUBLE DENSITY FORMATS
  - IBM 3740 (FM)
  - IBM 34 (MFM)
- AUTOMATIC SEEK WITH VERIFY
- MULTIPLE SECTOR READ/WRITE
- TTL COMPATIBLE
- PROGRAMMABLE CONTROL
  - SELECTABLE TRACK-TO-TRACK ACCESS
  - HEAD LOAD TIMING
- SOFTWARE COMPATIBLE WITH THE FD179X SERIES
- SOFT SECTOR FORMAT COMPATIBILITY

APPLICATIONS

8" FLOPPY AND 5¼" MINI FLOPPY CONTROLLER
SINGLE OR DOUBLE DENSITY
CONTROLLER/FORMATTER

The WD279X Family are MOS/LSI devices which perform the functions of a Floppy Disk Controller/Formatter. Software compatible with its predecessor, the FD179X, the device also contains a high performance Phase-Lock-Loop Data Separator as well as Write Precompensation Logic.

When operating in Double Density mode, Write Precompensation is automatically engaged to a value programmed via an external potentiometer. An on-chip VCO and phase comparator allows adjustable frequency range for 5¼" or 8" Floppy Disk interfacing.

The WD279X is fabricated in NMOS silicon gate technology and available in a 40 pin dual-in-line ceramic or plastic package.

FEATURES	2791	2793	2795	2797

ADVANCE INFORMATION

WD1010 Winchester Disk Controller

FEATURES

- Compatible with most 8- and 16-bit processors
- Data rate up to 5 Mbits per second
- Multiple sector read/write commands
- Unlimited interleave capability
- Automatic formatting
- Software selectable sector size (128, 256, 512, or 1024 bytes per sector)
- CRC generation/verification
- Automatic retries on all errors
- Automatic restore on seek errors
- Single +5V supply
- Provision for external ECC capability

APPLICATIONS

Seagate ST506, ST512
Shugart SA1000, SA1100, SA600
Tandon 600 Series
Texas Instruments 506
RMS 500 Series
Quantum Q2000 Series
Miniscribe
. . . and others

DESCRIPTION

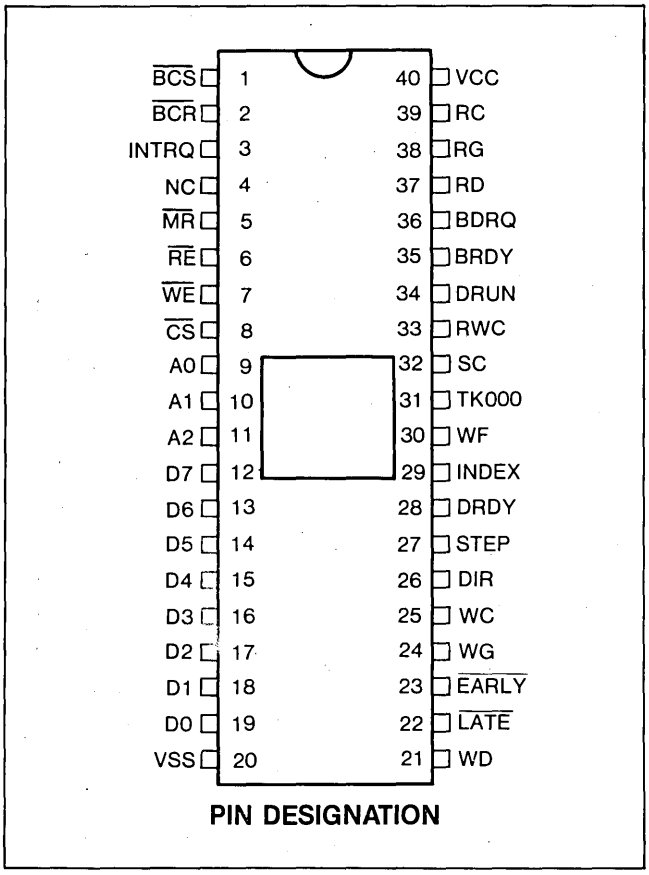
The WD1010 is a MOS/LSI device designed for use with the drives listed above as well as other drives compatible with the SA1000 or ST506 interface. The controller requires only a single +5 volts supply. It is designed to operate with an external sector buffer memory and to interface directly with TTL logic.

The WD1010 is fabricated in NMOS silicon-gate technology and is available in a 40-pin, Dual-in-line ceramic or plastic package.

FUNCTIONAL DESCRIPTION

The WD1010 is software compatible with the WD1000 controller board. Programming is very similar to that of the Western Digital FD179X floppy disk controller.

Data bytes are transferred to or from the buffer every 1.6μsec., with a 5Mbit/sec drive. The buffer may be either the Western Digital WD1510 128x9 FIFO memory (Fig. 1) or a combination of a 256x8 static RAM and a 9 bit resettable counter (Fig. 2). The WD1010 generates control signals to minimize external gating. Buffer to processor transfers are made via programmed I/O or DMA. The controller also generates handshake signals to control DMA operations for multiple sector transfers. The WD1010 interfaces to the Western Digital DM1883 and other DMA controllers.



PIN DESIGNATION

FD179X-02
Floppy Disk Formatter/Controller Family

FEATURES

- TWO VFO CONTROL SIGNALS — RG & VFOE
- SOFT SECTOR FORMAT COMPATIBILITY
- AUTOMATIC TRACK SEEK WITH VERIFICATION
- ACCOMMODATES SINGLE AND DOUBLE DENSITY FORMATS
  - IBM 3740 Single Density (FM)
  - IBM System 34 Double Density (MFM)
  - Non IBM Format for Increased Capacity
- READ MODE
  - Single/Multiple Sector Read with Automatic Search or Entire Track Read
  - Selectable 128, 256, 512 or 1024 Byte Sector Lengths
- WRITE MODE
  - Single/Multiple Sector Write with Automatic Sector Search
  - Entire Track Write for Diskette Formatting
- SYSTEM COMPATIBILITY
  - Double Buffering of Data 8 Bit Bi-Directional Bus for Data, Control and Status
  - DMA or Programmed Data Transfers
  - All Inputs and Outputs are TTL Compatible
  - On-Chip Track and Sector Registers/Comprehensive Status Information
- PROGRAMMABLE CONTROLS
  - Selectable Track to Track Stepping Time
  - Side Select Compare
- INTERFACES TO WD1691 DATA SEPARATOR
- WINDOW EXTENSION
- INCORPORATES ENCODING/DECODING AND ADDRESS MARK CIRCUITRY
- FD1792/4 IS SINGLE DENSITY ONLY
- FD1795/7 HAS A SIDE SELECT OUTPUT

WD1011 Winchester Data Separator Device

FEATURES

- 4.34 OR 5.0 MBIT/SEC DATA RATE
- INTERNAL CRYSTAL OSCILLATOR
- SINGLE +5V SUPPLY
- FM OR MFM OPERATION
- COMPATIBLE WITH THE WD1010
- WRITE CLOCK GENERATOR
- HIGH FREQUENCY DETECTION

GENERAL DESCRIPTION

The WD1011 Winchester Data Separator has been designed to replace the complex analog/digital circuitry required for data recovery by Winchester disk drives. Directly interfacing to the WD1010 Winchester Controller device, an on-chip crystal oscillator allows operation of 4.34 Mbit/sec or 5.0 Mbit/sec transfer rates. In addition to data recovery, the device provides Write Clock signals for the WD1010 as well as high frequency detection for pre-amble search. Output levels on data pins swing close to the supply rails for increased noise immunity and to minimize layout restrictions.

The WD1011 operates from a single 5 volt supply and is available in a 16 pin plastic or ceramic Dual-in-Line package.

ADVANCE INFORMATION

WESTERN DIGITAL
CORPORATION

WD1012 Write Precompensation Device

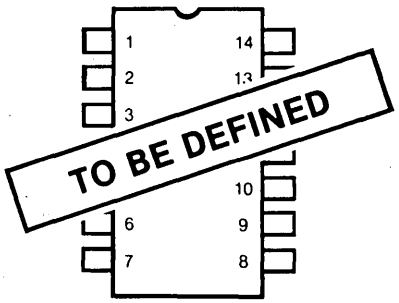
FEATURES

- DIRECT INTERFACE TO THE WD1010
- 12 NS. TYP. DELAY FROM EARLY
- PROVIDES TIMCLK FOR SA1000 TYPE DRIVES
- SINGLE +5V SUPPLY
- TTL COMPATIBLE INPUT/OUTPUTS
- COMPANION CHIP TO THE WD1011 DATA SEPARATOR

GENERAL DESCRIPTION

The WD1012 Write Precompensation device provides delayed data necessary for inner cylinder recording on Winchester disk drives. It is a companion chip to the Western Digital WD1010, utilizing signals from both the WD1010 and WD1011 data separator device. The WRITE DATA output, as well as EARLY, LATE, and RWC are applied to produce a pre-determined bit shift. Assertion of EARLY or LATE will cause a 12 ns. typ. shift of data based upon the precompensation algorithm internal to the WD1010. In addition, a divide-by-sixteen timing clock output is available for use by the SA1000 and other drives requiring a TIMCLK input.

The WD1012 operates from a single 5 volt supply and is available in a 14 pin plastic or ceramic package.



PIN DESIGNATION

© IC MASTER 1983

ADVANCE INFORMATION

WD1002 Winchester Disk Controller

GENERAL DESCRIPTION

The WD1002 is next generation of Winchester Controllers. It utilizes the WD1010 Winchester controller chip, and provides for floppy disk back up using the WD279X series of single chip floppy controllers.

Incorporated in this controller is all the circuitry needed for Hard disk control with floppy backup.

The firmware is incorporated in the WD1010 and the controller is compatible with previous WD1000 and WD1001. Additional software is needed for the floppy disk backup. Users of the WD1000/WD1001 need not use the floppy controller.

FEATURES

- SINGLE 5V SUPPLY
- FLOPPY DISK BACKUP
- ECC/CRC
- ST506 OR SA1000 INTERFACE
- COMPACT SIZE
- SECTOR SIZES TO 1024
- DATA RATES TO 5MBS
- AUTOMATIC FORMATTING
- WD1000 COMPATIBILITY

© IC MASTER 1983

FD1771-01 Floppy Disk Formatter/Controller

FEATURES

- SOFT SECTOR FORMAT COMPATIBILITY
- AUTOMATIC TRACK SEEK WITH VERIFICATION
- READ MODE
  - Single/Multiple Sector Write with Automatic Sector Search or Entire Track Read
  - Selectable 128 Byte or Variable Length Sector
- WRITE MODE
  - Single/Multiple Sector Write with Automatic Sector Search
  - Entire Track Write for Diskette Formatting
- PROGRAMMABLE CONTROLS
  - Selectable Track-to-Track Stepping Time
  - Selectable Head Settling and Head Engage Times
  - Selectable Three Phase or Step and Direction and Head Positioning Motor Controls
- SYSTEM COMPATIBILITY
  - Double Buffering of Data 8-Bit Bi-Directional Bus for Data, Control and Status
  - DMA or Programmed Data Transfers
  - All Inputs and Outputs are TTL Compatible

APPLICATIONS

FLOPPY DISK DRIVE INTERFACE

SINGLE OR MULTIPLE DRIVE CONTROLLER/FORMATTER

NEW MINI-FLOPPY CONTROLLER

GENERAL DESCRIPTION

The FD1771 is a MOS/LSI device that performs the functions of a Floppy Disk Controller/Formatter. The device is designed to be included in the disk drive electronics, and contains a flexible interface organization that accommodates the interface signals from most drive manufacturers. The FD1771 is compatible with the IBM 3740 data entry system format.

The processor interface consists of an 8-bit bi-directional bus for data, status, and control word transfers. The FD1771 is set up to operate on a multiplexed bus with other bus-oriented devices.

The FD1771 is fabricated in N-channel Silicon Gate MOS technology and is TTL compatible on all inputs and outputs. The A and B suffixes are for ceramic and plastic packages, respectively.

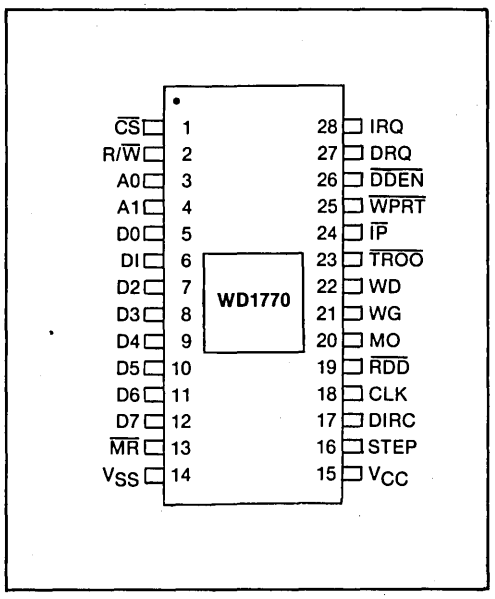
ADVANCE INFORMATION

WD1770 Minifloppy Formatter/Controller

FEATURES

- SINGLE OR DOUBLE DENSITY
- ON-CHIP DATA SEPARATOR
- ON-CHIP WRITE PRECOMPENSATION
- MOTOR CONTROL
- 179X SOFTWARE COMPATIBLE
- SINGLE +5V SUPPLY
- 28 PIN PACKAGE
- TTL COMPATIBLE



PIN DESIGNATION

GENERAL DESCRIPTION

The WD1770 Minifloppy Formatter/Controller is a stand-alone MOS/LSI device designed for controlling 5¼" single or double density disk drives. With only a single 8 MHZ clock, the WD1770 performs digital Data Separation and Write Precompensation (125 ns.) without the use of external adjustments or components. It executes the same instructions as its predecessor the WD179X/279X, plus an additional command option of motor control and time-out functions. With only buffers and driver gates, the WD1770 integrates the entire floppy interface.

Available in a 28 pin Dual-in-line package, the WD1770 is implemented in NMOS technology and operates from a single +5 volt supply.

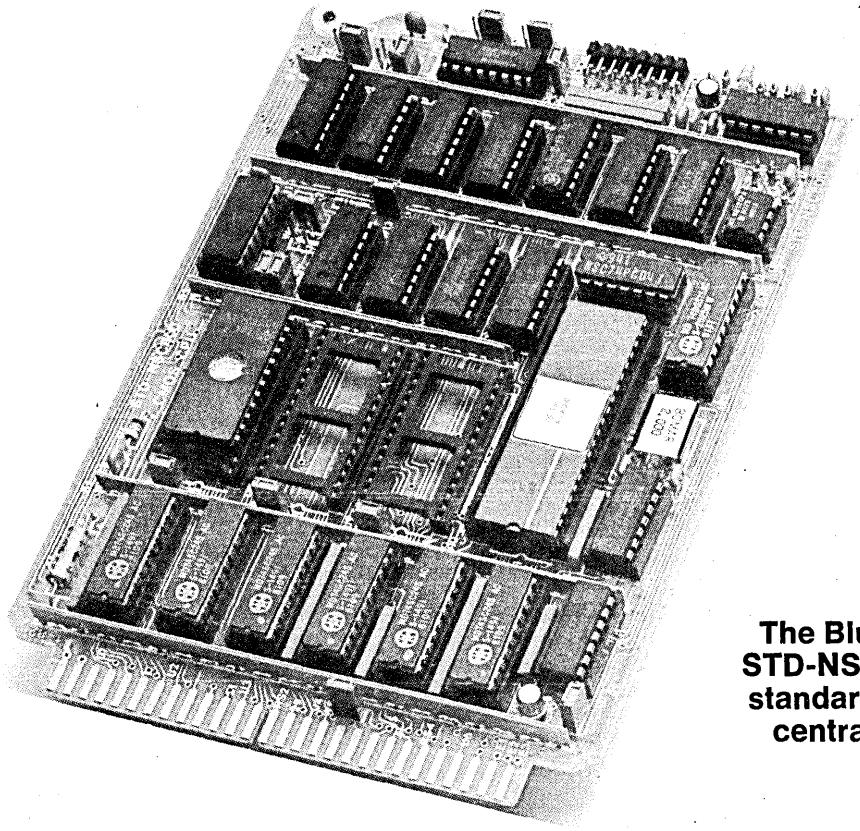
For Key Data On Every IC On This Board, The Place To Look Is...



The Blue Chip Computer STD-NSC800 is a CMOS standard bus compatible central processor card.

Equipment and system design often require the use of a wide variety of integrated circuits in order to obtain optimum performance. One way for an engineer to be certain that he hasn't overlooked the best device for his application is to refer to the pages of IC MASTER.

Surveys conducted by IC MASTER, integrated circuit manufacturers, and independent research agencies confirm that four out of five IC MASTER users have specified one or more products as the result of using IC MASTER.

Device No.	Description
NMC27C16	Erasable CMOS PROM
NSC800	8-bit Microprocessor
74SC245	3-State Octal Bus Driver
MD74SC373	Noninverted D-Type Transparent Latch
ICL8212C	Micropower Voltage Detector
MM74PC00	Quad 2-Input NAND Gate
MM74PC32	Quad 2-Input OR Gate
MM74PC08	Quad 2-Input AND Gate
MD74SC139	Octal Decoder/Demultiplexer
MM74PC74	Dual Type-D Flip-Flop
MSC74PC07	Hex Inverter
MM74C30	8-Input NAND Gate

Representative list of ICs on the Blue Chip Computer STD-NSC800 card. Key specifications for all of these ICs can be found in IC MASTER.

Z8400
Z80® CPU Central Processing Unit

Zilog
an affiliate of
EXXON Corporation

Features

- The instruction set contains 158 instructions. The 78 instructions of the 8080A are included as a subset; 8080A software compatibility is maintained.
- Six MHz, 4 MHz and 2.5 MHz clocks for the Z80B, Z80A, and Z80 CPU result in rapid instruction execution with consequent high data throughput.
- New 8 MHz Z8400H Z80 CPU extends throughput capability even more.
- Z8400L Low Power CPU offers the standard Z80 features in addition to requiring less power. 1 MHz, 1.5 MHz, or 2.5 MHz clock rates available.
- The extensive instruction set includes string, bit, byte, and word operations. Block searches and block transfers together with indexed and relative addressing result in the most powerful data handling capabilities in the microcomputer industry.
- The Z80 microprocessors and associated family of peripheral controllers are linked by a vectored interrupt system. This system may be daisy-chained to allow implementation of a priority interrupt scheme. Little, if any, additional logic is required for daisy-chaining.
- Duplicate sets of both general-purpose and flag registers are provided, easing the design and operation of system software through single-context switching, background-foreground programming, and single-level interrupt processing. In addition, two 16-bit index registers facilitate program processing of tables and arrays.
- There are three modes of high speed interrupt processing: 8080 compatible, non-Z80 peripheral device, and Z80 Family peripheral with or without daisy chain.
- On-chip dynamic memory refresh counter.

The Z80, Z80A, and Z80B CPUs are third-generation single-chip microprocessors with exceptional computational power. They offer higher system throughput and more efficient memory utilization than comparable second- and third-generation microprocessors. The internal registers contain 208 bits of read/write memory that are accessible to the programmer. These registers include two sets of six general-purpose registers which may be used individually as either 8-bit registers or as 16-bit register pairs. In addition, there are two sets of accumulator and flag registers. A group of "Exchange" instructions makes either set of main or alternate registers accessible to the programmer. The alternate set allows operation in foreground-background mode or it may be reserved for very fast interrupt response.

The Z80 also contains a Stack Pointer, Program Counter, two index registers, a Refresh register (counter), and an Interrupt register. The CPU is easy to incorporate into a system since it requires only a single +5 V power source. All output signals are fully decoded and timed to control standard memory or peripheral circuits, and it is supported by an extensive family of peripheral controllers. The internal block diagram shows the primary functions of the Z80 processors. Subsequent text provides more detail on the Z80 I/O controller family, registers, instruction set, interrupts and daisy chaining, and CPU timing.

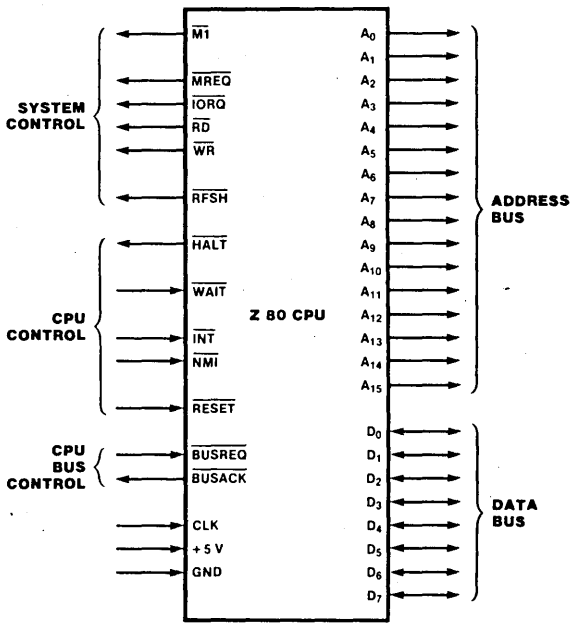

Figure 1. Pin Functions

For Zilog Product Selector Guide, See Pages 1581-1582.

Z8108
First MPU of the Z800™ Family

Zilog
an affiliate of
EXXON Corporation

Features

- Object code compatible with Z80, plus Multiply, Divide, and other instructions, and new addressing modes.
- 512K byte memory address space with on-chip paged memory management.
- 6-25 MHz CPU.
- On-chip clock oscillator with programmable scaler for bus timing.
- Z80-bus compatible.
- Supports the three Z80 interrupt modes, plus a new fourth mode that allows trap handling and interrupt nesting.
- Breakpoint and single step implemented as traps to facilitate debugging.
- System and User modes.
- Optional separation of program and data.
- On-chip refresh with 10-bit addressing.

The Z8108 is a 40-pin microprocessor that operates on the Z80 bus. It incorporates advanced architectural features for greater throughput and increased memory addressing, while maintaining Z80 object code compatibility. These new features provide a continuing growth path for present Z80-based designs and a high-performance microprocessor for future designs.

The Z8108 is an enhanced version of the Z80 Central Processing Unit (CPU). Advanced features such as dual mode (System/User) operation and a sophisticated interrupt and trap handling mechanism are supported by the CPU architecture. The Z80 instruction set has been retained to provide binary code compatibility with the present Z80. The augmented instruction set provides enhancements and extensions to many Z80 instructions. Four new addressing modes have been added to increase the flexibility and power of the instruction set. The Z8108 also contains an on-chip clock oscillator and a refresh controller that provides 10-bit refresh addresses for dynamic memories.

One important requirement for today's microprocessor-based system design is to increase memory address space beyond 64K bytes for 8-bit machines. The Z8108 provides this capability with its on-chip Memory Management Unit (MMU). The MMU dynamically translates memory addresses to allow the microprocessor to address 512K bytes. In addition to enabling an expanded address space, the MMU performs other memory management functions previously handled by dedicated off-chip memory management devices.

For Zilog Product Selector Guide, See Pages 1581-1582.
© IC MASTER 1983

Z8410
Z80® DMA Direct Memory Access Controller

Zilog
an affiliate of
EXXON Corporation

Features

- Transfers, searches and search/transfers in Byte-at-a-Time, Burst or Continuous modes. Cycle length and edge timing can be programmed to match the speed of any port.
- Dual port addresses (source and destination) generated for memory-to-I/O, memory-to-memory, or I/O-to-I/O operations. Addresses may be fixed or automatically incremented/decremented.
- Next-operation loading without disturbing current operations via buffered starting-address registers. An entire previous sequence can be repeated automatically.
- Extensive programmability of functions. CPU can read complete channel status.
- Standard Z80 Family bus-request and prioritized interrupt-request daisy chains implemented without external logic. Sophisticated, internally modifiable interrupt vectoring.
- Direct interfacing to system buses without external logic.

The Z80 DMA (Direct Memory Access) is a powerful and versatile device for controlling and processing transfers of data. Its basic function of managing CPU-independent transfers between two ports is augmented by an array of features that optimize transfer speed and control with little or no external logic in systems using an 8- or 16-bit data bus and a 16-bit address bus.

Z8420
Z80® PIO Parallel Input/Output Controller

Features

- Provides a direct interface between Z80 microcomputer systems and peripheral devices.
- Both ports have interrupt-driven handshake for fast response.
- Four programmable operating modes: byte input, byte output, byte input/output (Port A only), and bit input/output.
- Programmable interrupts on peripheral status conditions.
- Standard Z80 Family bus-request and prioritized interrupt-request daisy chains implemented without external logic.
- The eight Port B outputs can drive Darlington transistors (1.5 mA at 1.5 V).

The Z80 PIO Parallel I/O Circuit is a programmable, dual-port device that provides a TTL-compatible interface between peripheral devices and the Z80 CPU. The CPU configures the Z80 PIO to interface with a wide range of peripheral devices with no other external logic. Typical peripheral devices that are compatible with the Z80 PIO include most keyboards, paper tape readers and punches, printers, PROM programmers, etc.

Z8430
Z80® CTC Counter/ Timer Circuit

Features

- Four independently programmable counter/timer channels, each with a readable downcounter and a selectable 16 or 256 prescaler. Downcounters are reloaded automatically at zero count.
- Selectable positive or negative trigger initiates timer operation.
- Three channels have Zero Count/Timeout outputs capable of driving Darlington transistors.
- Interfaces directly to the Z80 CPU or—for baud rate generation—to the Z80 SIO.
- Standard Z80 Family daisy-chain interrupt structure provides fully vectored, prioritized interrupts without external logic. The CTC may also be used as an interrupt controller.

The Z80 CTC four-channel counter/timer can be programmed by system software for a broad range of counting and timing applications. The four independently programmable channels of the Z80 CTC satisfy common microcomputer system requirements for event counting, interrupt and interval timing, and general clock rate generation.

© IC MASTER 1983
For Zilog Product Selector Guide, See Pages 1581-1582.

Z8440
Z80® SIO Serial Input/Output Controller

Zilog
an affiliate of
EXXON Corporation

Features

- Two independent full-duplex channels, with separate control and status lines for modems or other devices.
- Data rates of 0 to 500K bits/second in the x1 clock mode with a 2.5 MHz clock (Z80 SIO), or 0 to 800K bits/second with a 4.0 MHz clock (Z80A SIO).
- Receiver data registers quadruply buffered, transmitter registers doubly buffered.
- Asynchronous protocols: everything necessary for complete messages in 5, 6, 7 or 8 bits/character. Includes variable stop bits and several clock-rate multipliers; break generation and detection; parity; overrun and framing error detection.
- Synchronous protocols: everything necessary for complete bit- or byte-oriented messages in 5, 6, 7 or 8 bits/character, including IBM Bisync, SDLC, HDLC, CCITT-X.25 and others. Automatic CRC generation/checking, sync character and zero insertion/deletion, abort generation/detection and flag insertion.
- Highly sophisticated and flexible daisy-chain interrupt vectoring for interrupts without external logic.

The Z80 SIO Serial Input/Output Controller is a dual-channel data communication interface with extraordinary versatility and capability. Its basic functions as a serial-to-parallel, parallel-to-serial converter/controller can be programmed by a CPU for a broad range of serial communication applications.

Z8470 Z80® DART Dual Asynchronous Receiver/Transmitter

Features

- Two independent full-duplex channels with separate modem controls. Modem status can be monitored.
- In x1 clock mode, data rates are 0 to 500K bits/second with a 2.5 MHz clock, or 0 to 800K bits/second with a 4.0 MHz clock.
- Receiver data registers are quadruply buffered; the transmitter is doubly buffered.
- Programmable options include 1, 1½ or 2 stop bits; even, odd or no parity; and x1, x16, x32 and x64 clock modes.
- Break generation and detection as well as parity-, overrun- and framing-error detection are available.
- Interrupt features include a programmable interrupt vector, a "status affects vector" mode for fast interrupt processing, and the standard Z80 peripheral daisy-chain interrupt structure that provides automatic interrupt vectoring with no external logic.
- On-chip logic for ring indication and carrier-detect status.

The Z80 DART (Dual-Channel Asynchronous Receiver/Transmitter) is a dual-channel multi-function peripheral component that satisfies a wide variety of asynchronous serial data communications requirements in microcomputer systems. The Z80 DART is used as a serial-to-parallel, parallel-to-serial converter/controller in asynchronous applications. In addition, the device also provides modem controls for both channels. In applications where modem controls are not needed, these lines can be used for general-purpose I/O.

© IC MASTER 1983

Z8001/2
Z8000™ CPU Central Processing Unit

Zilog
an affiliate of
EXXON Corporation

Features

- Regular, easy-to-use architecture
- Instruction set more powerful than many minicomputers
- Directly addresses 8M bytes
- Eight user-selectable addressing modes
- Seven data types that range from bits to 32-bit long words and byte and word strings
- System and Normal operating modes
- Separate code, data and stack spaces
- Sophisticated interrupt structure
- Resource-sharing capabilities for multi-processing systems
- Multi-programming support
- Compiler support
- Memory management and protection provided by Z8010 Memory Management Unit
- 32-bit operations, including signed multiply and divide
- Z-BUS compatible
- 4, 6 and 10 MHz clock rate

The Z8000 is an advanced high-end 16-bit microprocessor that spans a wide variety of applications ranging from simple stand-along computers to complex parallel-processing systems. Essentially a monolithic minicomputer central processing unit, the Z8000 CPU is characterized by an instruction set more powerful than many minicomputers; abundant resources in registers, data types, addressing modes and addressing range; and a regular architecture that enhances throughouput by avoiding critical bottlenecks such as implied or dedicated registers.

CPU resources include sixteen 16-bit general-purpose registers, seven data types that range from bits to 32-bit long words and word strings, and eight user-selectable addressing modes. The 110 distinct instruction types can be combined with the various data types and addressing modes to form a powerful set of 414 instructions. Moreover, the instruction set exhibits a high degree of regularity: most instructions can use any of the five main addressing modes and can operate on byte, word and long-word data types.

The CPU can operate in either the system or normal modes. The distinction between these two modes permits privileged operations, thereby improving operating system organization and implementation. Multiprogramming is supported by the "atomic" Test and Set instruction; multiprocessing by a combination of instruction and hardware features; and compilers by multiple stacks, special instructions and addressing modes.

The Z8000 CPU is offered in two versions: the Z8001 48-pin segmented CPU and the Z8002 40-pin non-segmented CPU. The main difference between the two is in addressing range. The Z8001 can directly address 8 megabytes of memory; the Z8002 directly addresses 64 kilobytes. The two operating modes - system and normal - and the distinction between code, data and stack spaces within each mode allows memory extension up to 48 megabytes for the Z8001 and 384 kilobytes for the Z8002.

To meet the requirements of complex, memory-intensive applications, a companion memory-management device is offered for the Z8001. The Z8010 Memory Management Unit manages the large address space by providing features such as segment relocation and memory protection. The Z8001 can be used with or without the Z8010. If used by itself, the Z8001 still provides an 8 megabyte direct addressing range, extendable to 48 megabytes.

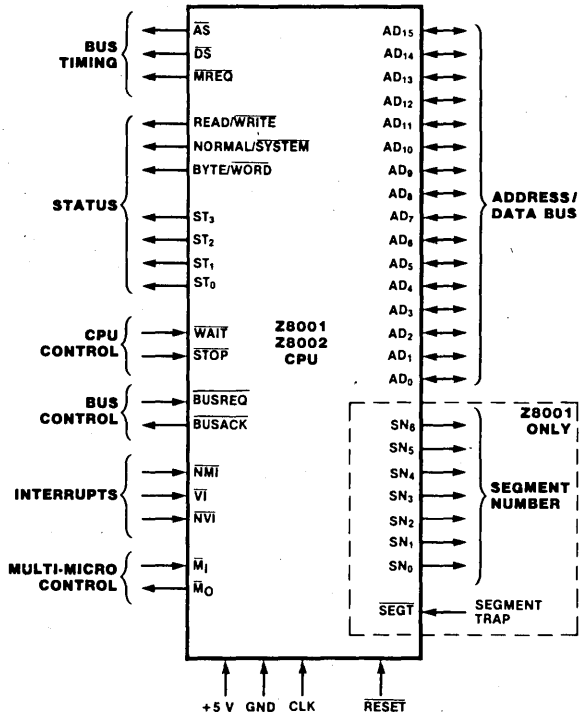

Figure 1. Z8000 CPU Pin Functions

© IC MASTER 1983

For Zilog Product Selector Guide, See Pages 1581-1582.

Z8003/4 Z8000™ VMPU Virtual Memory Processing Unit

Zilog
an affiliate of
EXXON Corporation

Features

- Binary, function, and pin compatibility with the Z8001/2 microprocessors.
- Designed-in compatibility with present and future Zilog Memory Management Units (MMUs).
- Operates with up to a 10 MHz clock.
- Status lines indicate the read/write phase of the Test and Set instruction for use in multiprocessor systems.
- 23-bit segmented addresses for Z8003.
- 16-bit non-segmented addresses for Z8004.

The Z8003/4 Virtual Memory Processor Unit (VMPU), a 16-bit MOS microprocessor, offers integral provisions for operation in a virtual memory environment, in addition to the features of the Z8001 CPU. The Z8003 VMPU generates 23-bit addresses. The address space is organized into 128 segments, each up to 64K bytes in length. The Z8004 generates 16-bit addresses. The Z8003/4 VMPU addressing scheme distinguishes between memory space for program, data, and stack in each of two modes, System and Normal.

For use in shared-memory multiprocessor systems, the Z8003/4 VMPU provides an output on the status lines (ST_0-ST_3), indicating the read/write phase of the Test and Set (TSET) instruction. This status output can be used externally for arbitration of bus control.

In a virtual memory environment, the programs and data being operated on need not reside simultaneously in main memory. Thus, provision must be made for retrieving parts of a program or data located in "secondary" storage (such as a disk). Attempts by the microprocessor to access instructions or data not in main memory are called "accesses to nonresident data." When this is done, the transaction accessing the nonresident data must be interrupted, the state of the microprocessor saved, the program or data in secondary storage moved to main memory, the state of the microprocessor restored, and the interrupted instruction restarted.

The Z8003/4 VMPU provides an external abort pin to permit the interruption of instruction execution before the instruction completes. Internal logic preserves the contents of the status and working registers when an instruction is aborted (interrupted).

When the Z8003/4 VMPU is used in a multiprocessor system, there may be dual-ported memories used by the processors. In this type of system, a resources manager arbitrates simultaneously attempted accesses to shared resources. When a processor tests to see if a resource is in use, the read/write portion of the test transaction must not be interrupted or the probability of a collision increases greatly. The Z8003/4 VMPU provides features that help to avoid collisions during accesses to shared resources via the enhanced TSET instruction.

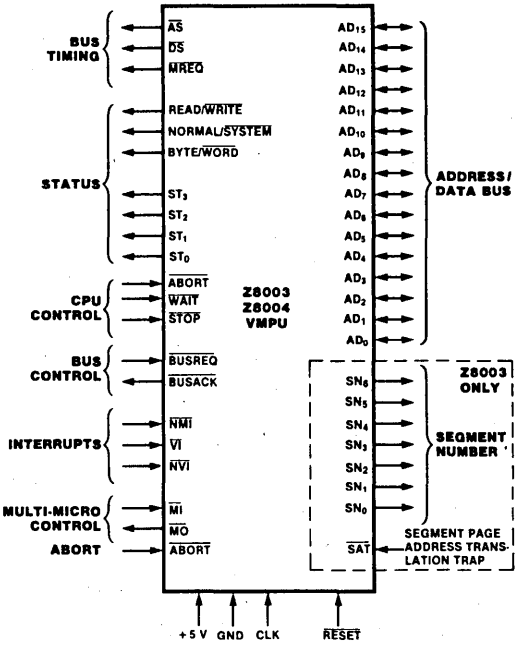

Figure 1. Pin Assignments

Z8010
Z8000™ Z-MMU Memory Management Unit

Zilog
an affiliate of
EXXON Corporation

Features

- Dynamic segment relocation makes software addresses independent of physical memory addresses.
- Sophisticated memory-management features include access validation that protects memory areas from unauthorized or unintentional access, and a write-warning indicator that predicts stack overflow.
- For use with both Z8001 and Z8003 CPU.
- 64 variable-sized segments from 256 to 65,536 bytes can be mapped into a total physical address space of 16M bytes; all 64 segments are randomly accessible.
- Multiple MMUs can support several translation tables for each Z8001/3 address space.
- MMU architecture supports multi-programming systems and virtual memory implementations.

The Z8010 Memory Management Unit (MMU) manages the large 8M byte addressing spaces of the Z8001 CPU. The MMU provides dynamic segment relocation as well as numerous memory protection features.

Dynamic segment relocation makes user software addresses independent of the physical memory addresses, thereby freeing the user from specifying where information is actually located in the physical memory. It also provides a flexible, efficient method for supporting multi-programming systems. The MMU uses a translation table to transform the 23-bit logical address output from the Z8001 CPU into a 24-bit address for the physical memory. (Only logical memory addresses go to an MMU for translation; I/O addresses and data, in general, must by pass this component.)

Z8015 Z8000™ PMMU Paged Memory Management Unit

Features

- PMMU architecture supports paged, virtual memory systems for the Z8003 VMPU.
- Dynamic page relocation makes software addresses independent of physical memory addresses.
- Memory-management features provide access validation to protect memory areas from unauthorized or unintentional access, and a write-warning indicator to prevent stack overflow.
- 64 pages, each 2048 bytes in length, can be mapped into a total physical address space of 16 megabytes.
- PMMU can be used to implement systems with larger or smaller page sizes.
- The number of accessible pages can be increased by using multiple PMMUs to support separate translation tables for each Z8003 VMPU address space.

The Z8015 Paged Memory Management Unit (PMMU) is designed to support a paged virtual memory system for the Z8003 Virtual Memory Processor Unit (VMPU). Although designed primarily for the Z8003, the PMMU can also be used to support the other CPUs in the Z8000 Family. Memory-management features allow access validation for memory protection and a write-warning to prevent stack overflow. An instruction abort for accesses to pages not in main memory allows restarting of instructions in the Z8003 VMPU. Each PMMU can manage a basic memory area of sixty-four 2048-byte, fixed-size pages. The VMPU's 8M byte logical address space is translated by the PMMU into a 16M byte physical address space. Page size can be easily changed and multiple PMMUs can be combined to support more pages. The PMMU is produced in a 64-pin package.

For Zilog Product Selector Guide, See Pages 1581-1582.

Z8016 Z8000™ DTC Direct Memory Access Transfer Controller

Zilog
an affiliate of
EXXON Corporation

Features

- Memory-to-peripheral transfer up to 2.66M bytes/second at 4 MHz.
- Memory-to-memory transfer up to 1.33M bytes/second at 4 MHz.
- Two fully independent, multi-function channels.
- Masked data pattern matching for search and search-and-transfer operations.
- Funneling option permits mixing of byte and word data during transfer operations.
- May be operated in logical address space in conjunction with the Z8010 Memory Management Unit.
- Programmable chaining operation provides automatic loading of control parameters from memory by each channel.
- Software- or hardware-controlled Wait state insertion.
- Automatic loading from base registers on each channel for efficient repetitive operations.
- Z-BUS daisy-chain interrupt hierarchy and bus-request structure.

The Z8016 DMA Transfer Controller (DTC) is a high-performance data transfer device designed to match the power and addressing capability of the Z8000 CPUs. In addition to providing block data transfer capability between memory and peripherals, each of the two DTC channels can perform peripheral-to-peripheral and memory-to-memory transfers.

Z8030 Z8000™ Z-SCC Serial Communications Controller

Features

- Two independent, 0 to 1M bit/second, full-duplex channels, each with a separate crystal oscillator, baud rate generator, and Digital Phase-Locked Loop for clock recovery.
- Multi-protocol operation under program control; programmable for NRZ, NRZI, or FM data encoding.
- Asynchronous mode with five to eight bits and one, one and one-half, or two stop bits per character; programmable clock factor; break detection and generation; parity, overrun, and framing error detection.
- Synchronous mode with internal or external character synchronization on one or two sync characters and CRC generation and checking with CRC-16 or CRC-CCITT preset to either 1s or 0s.
- SDLC/HDLC mode with comprehensive frame-level control, automatic zero insertion and deletion, I-field residue handling, abort generation and detection, CRC generation and checking, and SDLC Loop mode operation.
- Local Loopback and Auto Echo modes.

The Z8030 Z-SCC Serial Communications Controller is a dual-channel, multi-protocol data communications peripheral designed for use with the Zilog Z-Bus. The Z-SCC functions as a serial-to-parallel, parallel-to-serial converter/controller. The Z-SCC can be software-configured to satisfy a wide variety of serial communications applications. The device contains a variety of new, sophisticated internal functions including on-chip baud rate generators, Digital Phase-Locked Loops, and crystal oscillators that dramatically reduce the need for external logic.

For Zilog Product Selector Guide, See Pages 1581-1582.

Z8031 Z8000™ Z-ASCC Asynchronous Serial Communications Controller

Zilog
an affiliate of
EXXON Corporation

Features

- Two independent, 0 to 1M bit/second, full-duplex channels, each with a separate crystal oscillator, baud rate generator, and Digital Phase-Locked Loop for clock recovery.
- Programmable for NRZ, NRZI, or FM data encoding.
- Asynchronous communications with five to eight bits per character and one, one and one-half, or two stop bits per character; programmable clock factor; break detection and generation; parity, overrun, and framing error detection.
- Local Loopback and Auto Echo modes.

The Z8031 Z-ASCC Asynchronous Serial Communications Controller is a dual-channel data communications peripheral designed for use with the Zilog Z-BUS. The Z-ASCC functions as a serial-to-parallel, parallel-to-serial converter/controller. The device contains a variety of new, sophisticated internal functions including on-chip baud rate generators, Digital Phase-Locked Loops, and crystal oscillators that dramatically reduce the need for external logic.

Z8036 Z8000™ Z-CIO Counter/Timer and Parallel I/O Unit

Features

- Two independent 8-bit, double-buffered, bidirectional I/O ports plus a 4-bit special-purpose I/O port. I/O ports feature programmable polarity, programmable direction (Bit mode), "pulse catchers," and programmable open-drain outputs.
- Four handshake modes, including 3-Wire (like the IEEE-488).
- REQUEST/$\overline{\text{WAIT}}$ signal for high-speed data transfer.
- Flexible pattern-recognition logic, programmable as a 16-vector priority interrupt controller.
- Three independent 16-bit counter/timers with up to four external access lines per counter/timer (count input, output, gate, and trigger), and three output duty cycles (pulsed, one-shot, and square-wave), programmable as retriggerable or nonretriggerable.
- Easy to use since all registers are read/write and directly addressable.

The Z8036 Z-CIO Counter/Timer and Parallel I/O element is a general-purpose peripheral circuit, satisfying most counter/timer and parallel I/O needs encountered in system designs. This versatile device contains three I/O ports and three counter/timers. Many programmable options tailor its configuration to specific applications. The use of the device is simplified by making all internal registers (command, status, and data) readable and (except for status bits) writable. The Z-CIO is directly Z-BUS compatible.

© IC MASTER 1983
For Zilog Product Selector Guide, See Pages 1581-1582.

Z8038 Z8000™ Z-FIO FIFO Input/ Output Interface Unit

Zilog
an affiliate of
EXXON Corporation

Features

- 128 byte FIFO buffer provides asynchronous bidirectional CPU/CPU or CPU/peripheral interface; expandable to any width in byte increments by use of multiple FIOs.
- Interlocked 2-wire or 3-wire handshake logic port mode; Z-BUS or non-Z-BUS interface.
- Pattern-recognition logic stops DMA transfers and/or interrupts CPU; preset byte count can initiate variable-length DMA transfers.
- Seven sources of vectored/nonvectored interrupts which include pattern-match, byte count, empty or full buffer status; a dedicated "mailbox" register with interrupt capability provides CPU/CPU communication.
- REQUEST/$\overline{\text{WAIT}}$ lines control high-speed data transfers.
- All functions are software controlled via directly addressable read/write registers.

The Z8038 FIO provides an asynchronous 128-byte FIFO buffer between two CPUs or between a CPU and a peripheral device. This buffer interface expands to a 16-bit or wider data path and expands in depth to add as many Z8060 FIFOs (and an additional FIO) as are needed.

The FIO manages data transfers by assuming Z-BUS, non-Z-BUS microprocessor (a generalized microprocessor interface), Interlocked 2-Wire Handhsake, and 3-Wire Handshake operating modes. These modes interface dissimilar CPUs or CPUs and peripherals running under differing speeds or protocols, allowing asynchronous data transactions and improving I/O overhead by as much as two orders of magnitude.

Z8060 Z8000™ FIFO Buffer Unit and Z-FIO Expander

Features

- Bidirectional, asynchronous data transfer capability
- Large 128-bit-by-8-bit buffer memory
- Two-wire, interlocked handshake protocol
- Wire-ORing of empty and full outputs for sensing of multiple-unit buffers
- 3-state data outputs
- Connects any number of FIFOs in series to form buffer of any desired length
- Connects any number of FIFOs in parallel to form buffer of any desired width

The Z8060 First-In First-Out (FIFO) Buffer Unit consists of a 128-bit-by-8-bit memory, bidirectional data transfer and handshake logic. The structure of the FIFO unit is similar to that of other available buffer units. FIFO is a general-purpose unit; its handshake logic is compatible with that of other members of Zilog's Z8 and Z8000 Families.

Z8065 Z8000™ Z-BEP Burst Error Processor

Features

- Detects errors in serial data up to 585,442 bits in length
- Implements correction of a detected error burst of up to 12 bits in length
- Handles effective data rates of up to 20M bits per second
- Provides four industry-standard polynomials for error detection
- Provides three correction algorithms:
  - ☐ Full-period clock-around method for conformance to current practices
  - ☐ Chinese remainder theorem, which reduces correction time by orders of magnitude
  - ☐ Reciprocal polynomial, which allows correction with 48-bit code
- Designed for use in both microprocessor and microprogrammed disk-controlled systems

For Zilog Product Selector Guide, See Pages 1581-1582.

© IC MASTER 1983

Features (Continued)

The Z8065 Burst Error Processor (BEP) provides error detection and correction facilities for high-performance, high-density disk systems and any other system in which high-speed serial data transfers occur.

For error detection, the BEP provides a selection of four standard polynomials, including the more popular 56-bit and 48-bit versions, to satisfy a broad range of applications. During write operations, the BEP generates check-bit words, which are appended to the record being written onto the disk. These check-bit words are then used in subsequent reads and, if necessary, in correction operations.

Z8068
Z8000™ Z-DCP Data Ciphering Processor

Features

- Encrypts and decrypts data using the National Bureau of Standards encryption algorithm.
- Supports three standard ciphering modes: Electronic Code Book, Chain Block and Cipher Feedback.
- Three separate registers for encryption, decryption, and master keys improve system security and throughput by eliminating frequent reloading of keys.
- Three separate programmable ports (master, slave, and key data) provide hardware separation of encrypted data, clear data, and keys.
- Data rates greater than 1M bytes per second can be handled.
- Key parity check.

The Z8068 Data Ciphering Processor (DCP) is an n-channel, silicon-gate LSI device, which contains the circuitry to encrypt and decrypt data using National Bureau of Standards encryption algorithms. It is designed to be used in a variety of environments, including dedicated controllers, communication concentrators, terminals, and peripheral task processors in general processor systems.

The DCP provides a high throughput rate using Cipher Feedback, Electronic Code Book, or Cipher Block Chain operating modes. The provision of separate ports for key input, clear data, and enciphered data enhances security.

The Z8068 DCP is designed to interface directly to Zilog's Z-BUS®.

Z8090
Z8000™ Z-UPC Universal Peripheral Controller

Features

- Complete slave microcomputer, for distributed processing Z-BUS use.
- 2K bytes of on-chip ROM.
- 256-byte register file, accessible by both the master CPU and Z-UPC, using a fail-safe message-passing protocol.
- Three programmable I/O ports, two with optional 2-Wire Handshake.
- Z8 architecture and instruction set.
- Six levels of priority interrupts from eight sources: six external sources and two internal sources.
- Two programmable 8-bit counter/timers each with a 6-bit prescaler. Counter/Timer T0 is driven by an internal source, and Counter/Timer T1 can be driven by internal or external sources. Both counter/timers are independent of program execution.

The Z8090 Universal Peripheral Controller (Z-UPC) is an intelligent peripheral controller for distributed processing applications. The Z-UPC unburdens the host processor by assuming tasks traditionally done by the host (or by added hardware), such as performing arithmetic, translating or formatting data, and controlling I/O devices. Based on the Z8 microcomputer architecture and instruction set, the Z-UPC contains 2K bytes of internal program ROM, a 256-byte register file, three 8-bit I/O ports, and two counter/timers.

© IC MASTER 1983
For Zilog Product Selector Guide, See Pages 1581-1582.

Z8530 SCC Serial Communications Controller

Zilog
an affiliate of
EXXON Corporation

Features

- Two independent, 0 to 1M bit/second, full-duplex channels, each with a separate crystal oscillator, baud rate generator, and Digital Phase-Locked Loop for clock recovery.
- Multi-protocol operation under program control; programmable for NRZ, NRZI, or FM data encoding.
- Asynchronous mode with five to eight bits and one, one and one-half, or two stop bits per character; programmable clock factor; break detection and generation; parity, overrun, and framing error detection.
- Synchronous mode with internal or external character synchronization on one or two synchronous characters and CRC generation and checking with CRC-16 or CRC-CCITT preset to either 1s or 0s.
- SDLC/HDLC mode with comprehensive frame-level control, automatic zero insertion and deletion, I-field residue handling, abort generation and detection, CRC generation and checking, and SDLC Loop mode operation.
- Local Loopback and Auto Echo modes.

The Z8530 SCC Serial Communications Controller is a dual-channel, multi-protocol data communications peripheral designed for use with conventional non-multiplexed buses. The SCC functions as a serial-to-parallel, parallel-to-serial converter/controller. The SCC can be software-configured to satisfy a wide variety of serial communications applications. The device contains a variety of new, sophisticated internal functions including on-chip baud rate generators, Digital Phase-Locked Loops, and crystal oscillators that dramatically reduce the need for external logic.

Z8531 ASCC Asynchronous Serial Communications Controller

Features

- Two independent, 0 to 1M bit/second, full-duplex channels, each with a separate crystal oscillator, baud rate generator, and Digital Phase-Locked Loop for clock recovery.
- Programmable for NRZ, NRZI, or FM data encoding.
- Asynchronous communications with five to eight bits per character and one, one and one-half, or two stop bits per character; programmable clock factor; break detection and generation; parity, overrun, and framing error detection.
- Local Loopback and Auto Echo modes.

The Z8531 ASCC Asynchronous Serial Communications Controller is a dual-channel, multi-protocol data communications peripheral designed for use with conventional non-multiplexed buses. The ASCC functions as a serial-to-parallel, parallel-to-serial converter/controller. The device contains a variety of new, sophisticated internal functions including on-chip baud rate generators, Digital Phase-Locked Loops, and crystal oscillators that dramatically reduce the need for external logic.

The ASCC also has facilities for modem controls in both channels. In applications where these controls are not needed, the modem controls can be used for general-purpose I/O.

Z8536 CIO Counter/Timer and Parallel I/O Unit

Features

- Two independent 8-bit, double-buffered, bidirectional I/O ports plus a 4-bit special-purpose I/O port. I/O ports feature programmable polarity, programmable direction (Bit mode), "pulse catchers," and programmable open-drain outputs.
- Four handshake modes, including 3-Wire (like the IEEE-488).
- REQUEST/$\overline{\text{WAIT}}$ signal for high-speed data transfer.
- Flexible pattern-recognition logic, programmable as a 16-vector interrupt controller.

For Zilog Product Selector Guide, See Pages 1581-1582.

© IC MASTER 1983

Features (Continued)

- Three independent 16-bit counter/timers with up to four external access lines per counter/timer (count input, output, gate, and trigger), and three output duty cycles (pulsed, one-shot, and square-wave), programmable as retriggerable or nonretriggerable.
- Easy to use since all registers are read/write.

The Z8536 CIO Counter/Timer and Parallel I/O element is a general-purpose peripheral circuit, satisfying most counter/timer and parallel I/O needs encountered in system designs. This versatile device contains three I/O ports and three counter/timers. Many programmable options tailor its configuration to specific applications. The use of the device is simplified by making all internal registers (command, status, and data) readable and (except for status bits) writable. In addition, each register is given its own unique internal address, so that any register can be accessed in two operations. All data registers can be directly accessed in a single operation. The CIO is easily interfaced to all popular microprocessors.

Z8581 CGC Clock Generator and Controller

Features

- Two independent 20 MHz oscillators.
- Clock output drivers meet the high capacitance clock input requirements of NMOS microprocessors.
- Outputs directly drive the Z80 and Z8000 microprocessor clock inputs.
- Oscillator input frequency reference source can be either crystals or TTL-compatible oscillators.
- System Clock oscillator provides a TTL-compatible timebase signal at source frequency;provides an NMOS-compatible clock signal at a programmable percentage of the source frequency; provides ability to stretch High or Low phase of clock signal under external control.
- General-Purpose Clock oscillator that provides an NMOS clock signal at half source frequency.
- System Reset output that is synchronized with System Clock output; power up reset period is maintained for a minimum of 30 ms; and external input initiates system reset.
- 18-pin slimline package used; single +5 V dc power required.

The Z8581 Clock Generator and Controller is a versatile addition to Zilog's family of Universal microprocessor components. The selective clock-stretching capabilities and variety of timing outputs produced by this device allow it to easily meet the timing design requirements of systems with microprocessors and LSI peripherals. The clock output drivers of the Z8581 also meet the non-TTL voltage requirements for driving NMOS clock inputs with no additional external discrete transistors.

Z8590 UPC Universal Peripheral Controller

Features

- Complete slave microcomputer, for distributed processing use.
- Unmatched power of Z8 architecture and instruction set.
- Three programmable I/O ports, two with optional 2-Wire Handshake.
- Six levels of priority interrupts from eight sources: six from external sources and two from internal sources.
- Two programmable 8-bit counter/timers each with a 6-bit prescaler. Counter/Timer T0 is driven by an internal source, and Counter/Timer T1 can be driven by internal or external sources. Both counter/timers are independent of program execution.
- 256-byte register file, accessible by both the master CPU and UPC, as allocated in the UPC program.
- 2K bytes of on-chip ROM for efficiency and versatility.

© IC MASTER 1983
For Zilog Product Selector Guide, See Pages 1581-1582.

Features (Continued)

The Z8590 Universal Peripheral Controller (UPC) is an intelligent peripheral controller for distributed processing applications. The UPC unburdens the host processor by assuming tasks traditionally done by the host (or by added hardware), such as performing arithmetic, translating or formatting data, and controlling I/O devices. Based on the Z8 microcomputer architecture and instruction set, the UPC contains 2K bytes of internal program ROM, a 256-byte register file, three 8-bit I/O ports, and two counter/timers.

Z8 FAMILY

Z8® Family of Microcomputers Z8601•Z8603

Features

- Z8601 Single-Chip Microcomputer with 2K ROM; Z803 Prototyping Device with EPROM interface.
- Complete microcomputer, 2K bytes of ROM, 128 bytes of RAM, 32 I/O lines, and up to 62K bytes addressable external space each for program and data memory.
- 144-byte register file, including 124 general-purpose registers, four I/O port registers, and 16 status and control registers.
- Average instruction execution time of 2.2 μs, maximum of 4.25 μs.
- Vectored, priority interrupts for I/O, counter/timers, and UART.
- Full-duplex UART and two programmable 8-bit counter/timers, each with a 6-bit programmable prescaler.
- Register Pointer so that short, fast instructions can access any of nine working register groups in 1.5 μs.
- On-chip oscillator which accepts crystal or external clock drive.
- Low-power standby option which retains contents of general-purpose registers.
- Single +5 V power supply—all pins TTL-compatible.

The Z8601 microcomputer introduces a new level of sophistication to single-chip architecture. Compared to earlier single-chip microcomputers, the Z8601 offers faster execution; more efficient use of memory; more sophisticated interrupt, input/output and bit-manipulation capabilities; and easier system expansion.

Under program control, the Z8601 can be tailored to the needs of its user. It can be configured as a stand-alone microcomputer with 2K bytes of internal ROM, a traditional microprocessor that manages up to 124K bytes of external memory, or a parallel-processing element in a system with other processors and peripheral controllers linked by the Z-BUS. In all configurations, a large number of pins remain available for I/O.

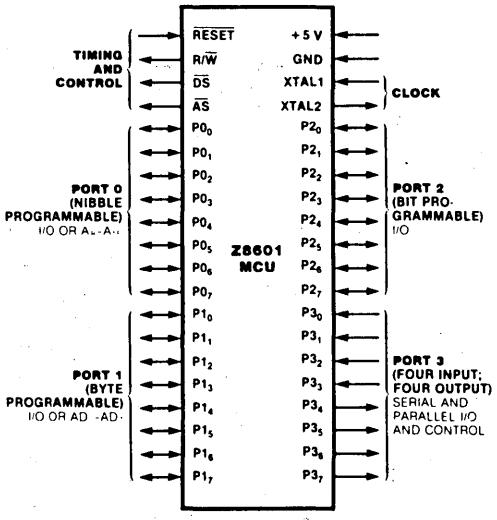

Figure 1. Pin Functions

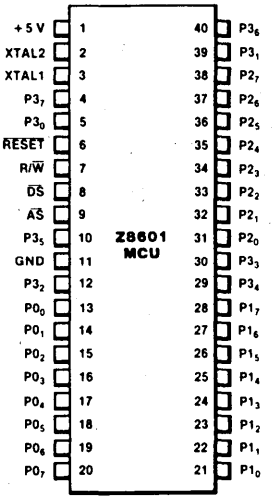

Figure 2. Pin Assignments

For Zilog Product Selector Guide, See Pages 1581-1582.

© IC MASTER 1983

Z8® Family of Microcomputers Z8611•Z8612•Z8613

Zilog
an affiliate of
EXXON Corporation

Features

- Z8611 Single-Chip Microcomputer with 4K ROM; Z8612 Development Device with memory interface; Z8613 Prototyping Device with EPROM interface.
- 4K ROM version of the Z8601 MCU, with 128 bytes of RAM, 32 I/O lines, and up to 60K bytes addressable external space each for program and data memory.

A 4K ROM version of the Z8601 chip, the Z8611 offers all the features of the Z8601.

Under program control, the Z8611 can be tailored to the needs of its user. It can be configured as a stand-alone microcomputer with 4K bytes of internal ROM, a traditional microprocessor that manages up to 120K bytes of external memory, or a parallel-processing element in a system with other processors and peripheral controllers linked by the Z-BUS. In all configurations, a large number of pins remain available for I/O.

Z8® Family Z8671 Microcomputer BASIC/Debug Interpreter

Features

- The Z8671 MCU is a complete microcomputer preprogrammed with a BASIC/Debug interpreter. Interaction between the interpreter and its user is provided through an on-board UART.
- BASIC/Debug can directly address the Z8671's internal registers and all external memory. It provides quick examination and modification of any external memory location or I/O port.
- The BASIC/Debug interpreter can call machine language subroutines to increase execution speed.
- The Z8671's auto start-up capability allows a program to be executed on power-up or Reset without operator intervention.
- Single +5 V power supply—all pins TTL-compatible.

The Z8671 Single-Chip Microcomputer (MCU) is one of a line of preprogrammed chips—in this case with a BASIC/Debug interpreter in ROM—offered by Zilog. As a member of the Z8 Family of microcomputers, it offers the same abundance of resources as the other Z8 microcomputers.

Because the BASIC/Debug interpreter is already part of the chip circuit, programming is made much easier. The Z8671 MCU thus offers a combination of software and hardware that is ideal for most industrial control applications. The Z8671 MCU allows fast hardware tests, and bit-by-bit examination and modification of any memory location, I/O port, or register. It also allows bit manipulation and logical operations. A self-contained line editor supports interactive debugging, further speeding up program development.

Z8® Family Z8681 Microcomputer

Features

- "ROMless" version of the Z8601 single-chip microcomputer, capable of addressing up to 128K bytes of external memory space.
- Up to 24 programmable I/O lines.
- 40-pin package, single +5 V supply, all pins TTL compatible.

The Z8681 MCU is the "ROMless" version of the Z8601 single-chip microcomputer and offers all the outstanding features of the Z8 Family architecture. Using the Z8681, it is possible to design a powerful microprocessor system incorporating a minimum number of support devices.

Port 1 is configured to function as a multiplexed Address/Data bus (AD_0–AD_7), while Port 0 is software configurable to output address bits A_8–A_{15}. This provides for program memory and data memory space of up to 64K bytes each.

Located on-chip are 144 bytes of RAM, organized as a register file of 124 general-purpose registers, 16 control and status registers, and three I/O port registers. (Port 1 cannot be utilized as an I/O register.) This file is divided into groups of working registers in such a way that short format instructions may be used to quickly access a register within a certain group.

Software Information

Zilog
an affiliate of
EXXON Corporation

To facilitate program development, Zilog offers the complementary PLZ application languages, PLZ/SYS and PLZ/ASM. Similar constructs within the PLZ languages permit the user to combine high-level, machine-independent modules together with machine-dependent modules.

PLZ/SYS is a procedure-oriented language with a style that blends elements of other well known languages such as Pascal, ALGOL, PL/I and C.

PLZ/ASM is a structured assembly language that provides all the capabilities needed to manage the microprocessor resources such as registers, memory accesses, and I/O operations.

This modular programming technique enables the programmer to concentrate on program design rather than on development system software.

The Z8000 Cross-Software Package, running on UNIX, enables multi-user access for enhanced software development. The package consists of a complete set of software tools for developing Z8000 programs on DEC's PDP 11/44, 11/45, and 11/70 systems. The C language, including compiler and code optimizer, protects the user's software investment by permitting program transportability.

The ZRTS Kernel, a small executive program, saves software development time by providing the core of a real-time multitasking operating system in PROMable form. Using ZCL, a high-level configuration language, the designer can define the target system and produce a memory-efficient, cost-effective end product.

Even more software products include the RIO Electric Blackboard, a multi-window full-screen text editor, and software development packages with utility programs that aid and simplify software development for the Z8 MCU and for Z8000 programs on the Z8000 Development Module.

*UNIX is a trademark of Bell Laboratories.

System 8000™

- 6 MHz Z8001A CPU, three 6 MHz Z8010 MMUs for dynamic segment relocation, plus 6 MHz Z80B CPUs.
- ZEUS, Zilog's enhanced UNIX operating system:
  - ☐ hierarchical file system
  - ☐ compatible file, device and interprocess I/O
- Selection of high-level languages: C, FORTRAN 77, BASIC, Pascal, COBOL, PLZ/SYS.
- System 8000 and ZEUS can be upgraded for use with 32-bit microprocessors to assure next-generation compatibility.
- Free-standing modular unit built as a multistation computing facility for office and laboratory environment.

The System 8000 Family members are fully-compatible "supermicros" whose high-performance, multiuser, multitasking capabilities are based on the Z8000 CPU. System 8000 incorporates a high-performance Winchester disk, as well as intelligent disk and tape controllers to further improve performance. All models have a common CPU board and peripheral controllers, and use identical operating system software (ZEUS). A UNIX-based operating system, ZEUS is specifically designed for software development and text processing. Numerous development tools are available, including the programming languages PLZ/ASM, PLZ/SYS, C, Pascal, and FORTRAN 77. Because ZEUS treats emulators as System 8000 peripherals, System 8000 can combine with EMS 8000, Z-SCAN 8000, ZDS 1/40, or non-Zilog emulators to provide total product development suport for multiple microprocessors.

Models 10 and 11. System 8000 Models 10 and 11 have been specially designed for the business and office environment. Each system is small enough to fit under a desk yet can provide computing power for up to eight users. The basic Model 10 and 11 have 256K bytes of parity RAM, and a 5-1/4" Winchester disk providing 18MB of storage. To back up the Winchester disk, Model 10 offers a 5-1/4" floppy disk drive with 1MB of storage, and Model 11 uses a 17MB cartridge tape drive for backup.

Models 21 and 31. System 8000 Models 21 and 31 are high-performance, high-capacity systems for 8 to 24 users. Model 21, designed for user growth, offers a standard 10-card slot cage; expansion to 18 slots is possible with an Expansion Chassis option. Model 21 offers 1MB of error-correcting memory (expandable to four MB), an 8" Winchester disk with 32MB storage capacity (expandable to 128MB), and a 17-MB tape cartridge drive for backup. Model 31 substitutes an 80MB SMD-compatible Winchester disk for the Model 21's 32-MB drive. Using as many as four such drives, the unit can offer up to 320MB of storage capacity.

EMS 8000
Emulator Subsystem

Zilog
an affiliate of
EXXON Corporation

Features

- Modular architecture can be easily expanded to support emulation of future Zilog microprocessors.
- A unique "snapshot" feature permits partitioning of a large real-time trace module into many small trace memories.
- Three parallel trigger comparators are provided.
- Logic-state analysis is provided for target CPU address, data, status, control and external probe bits.
- Up to 126K bytes of high-speed, static mappable memory can be accessed by the target system.
- A pulse output feature permits use of a high-end logic analyzer.
- Network debugging is supported.
- Full access is permitted to the target microprocessor's registers, memory and I/O space.
- A "transparent" mode allows the same terminal to be used for host and EMS user interface.

EMS 8000 is a high-end, emulation management system. The EMS 8000, together with Zilog's UNIX -based System 8000™ Z-LAB™, provides the developer of Z8000 microprocessor-based products with a complete set of tools for speeding up the product development cycle.

The emulator provides the link between the application software developed on a host system and the target system. It also aids in the integration of the software into the target system. Emulator to target system hookup is simple and immediate. A CPU pod/cable assembly directly replaces the target CPU. The emulator preserves the full capability of the target microprocessor. The emulator can start or stop program execution or it can perform single-step execution. Individual registers or memory can be examined and modified upon demand. Newly developed programs may be loaded into the development (target) hardware and executed in a real-time environment.

Z8000™ Emulator
Z-SCAN 8000

- **Provides Real Time Emulation up to 4 MHz of the Z8001 and Z8002 CPUs.**
- **Two RS-232C Serial Ports Make It a Peripheral Usable with Most Standard CRTs and Software Hosts.**
- **Transparent Operation Permits Direct Communication Between CRT and Host without Physical Disconnect.**
- **Highly Interactive, Screen-Oriented User Interface Makes Z-SCAN Easy To Use.**
- **Shadow Monitor Removes All Restrictions on Target System Memory Space, Making It Fully Available To the User.**
- **High-Speed Mappable Memory (no wait states) Is Available to Simulate Target System RAM/ROM.**

OVERVIEW

The Z-SCAN 8000 Emulator is an in-circuit emulator that has been designed as a peripheral unit for Zilog's Z8001 and Z8002 16-bit microprocessors. Interfacing via two RS-232C Serial ports to host and CRT terminal, Z-SCAN 8000 can work with Zilog's family of development hosts.

Because it employs a standard serial interface, Z-SCAN 8000 can also be used with virtually any software host system that runs a cross assembler or cross compiler capable of generating Z8000 code. Communication between the host system and Z-SCAN 8000 is with a standard serial format requiring only a simple upload and download utility to operate. For PROM-based target systems, Z-SCAN can operate stand-alone with a CRT terminal because the monitor and debug software is EPROM-resident.

For Zilog Product Selector Guide, See Pages 1581-1582.

Z8000™ Development Module

Zilog
an affiliate of
EXXON Corporation

- **Z8001/Z8002 CPU Evaluation and Debug Support**
- **16K Words Dynamic RAM (Expandable to 32K for User Code Execution and Debug**
- **32 Programmable I/O Lines**
- **EPROM Monitor and Debugger**
- **Transparent Operation Allows Software Development without Disconnection from CRT and Host System**
- **RS-232C Standard Serial Interfaces Compatible with Most CRT Terminals and Development Hosts**
- **Wire-wrap Area for Prototyping**

OVERVIEW

The Z8000 Development Module is a complete, single-board microcomputer that is used as a tool for the evaluation and debug of Z8000-based microprocessor systems. The Development Module is used in the first stages of the design and development process, not only as a tool for evaluating Z8000 microprocessor capabilities, but also as an environment in which code can be executed and debugged.

Z8000™ Software Development Package

- **Structured assembly language with high-level constructs.**
- **Relocatable and absolute object code format.**
- **Free format statements allow indentation and spacing for readability.**
- **External symbol references.**
- **Global symbol definitions.**

OVERVIEW

The Z8000 Software Development Package consists of five utility programs which aid and simplify the development of Z8000 programs. PLZ/ASM from Zilog's PLZ family bring all the advantages of modular programming to the Z8000 software developer and ensure transportability to future processors. The Z8000 LINKER, IMAGER, LOAD/SEND and ZPROG simplify the testing and production stages of new software. Each program facilitates a single step towards completing a segmented or nonsegmented program; together they guarantee a smooth, logical, and manageable software development process.

PDS 8000™ Development Systems

Features

- Supports entire family of Zilog microprocessors—Z8, Z80, and Z8000.
- Speeds program development with high-level, structured assembler.
- Extends system capability with an intelligent CRT console.
- Optional screen-oriented text editor.

System Hardware. The PDS 8000 Series consists of several models of single-user systems for the design, development, and debugging of Zilog microprocessor-based systems. The PDS 8000 is a Z80-based microcomputer system with 64K bytes of RAM, a disk controller, parallel printer interface, and an intelligent CRT console. Dual, floppy-disk drive with 600K bytes of hard-sectored storage capacity is standard with the PDS 8000.

The floppy disk drive is interfaced to the microcomputer via the Z80 Memory Disk Controller (MDC), which provides the Z80 microcomputer with all the data formatting required for reading and writing onto the floppy disks from RAM storage. Disk read/write accuracy is ensured by 16-bit CRC-code circuitry. The MDC also provides 48K bytes of dynamic RAM memory for programs or data storage.

System Software. The PDS 8000 System provides all the necessary software to handle software development tasks, from inputting source code to printing listings and creating EPROM's.

RIO Operating System. The PDS 8000 utilizes Zilog's field-proven RIO Operating System for the creation, editing, assembly, and debugging of software. RIO, with relocatable modules and I/O management, is a general-purpose computing system with architecture designed to facilitate the development process. RIO provides straightforward linking to various system routines and enables expansion of system features to meet the particular needs of individual user.

Z8000™ Dual-Processor System Upgrade Package

Zilog
an affiliate of
EXXON Corporation

Features

- Upgrades an MCZ™ or PDS system to a 16-bit system with 256K bytes of memory.
- Provides complete Z8000-based software development tools that execute at 6MHz: screen editor, translator, compiler/assembler, debugger.
- All software supplied in source code form to allow customization for applications.
- Existing Z80 programs continue to run.

The Z8000 Dual-Processor System Upgrade Package provides 16-bit processing power, 256K bytes of random access memory, and software development tools for Zilog's Z80-based MCZ and PDS systems. The package consists of a Z8000 Microprocessor Board (MPB/256), a screen editor, Z80 to Z8000 translator, and a Z8000 assembler and debugger.

ZDS-1/40 Development System

- **Full Development Support for the Z80® and Z80A Microprocessors**
- **64K Bytes of Memory to Support Large Programs**
- **600K Bytes Floppy Disk Storage**
- **In-Circuit Emulation up to 4 MHz**
- **Memory Mapping Allows Borrowing of System Memory Before Prototype Memory Is Built**
- **ZAP Package Provides Interactive, Symbolic Debugging With Disassembly**

OVERVIEW

The ZDS-1/40 Development System provides total development support for Z80 and Z80A CPU-based system designs. This support begins with a complete Z80-based microcomputer system that includes 64K bytes of RAM, dual single-sided, single density floppy disk drives and system software to assist in every phase of software development.

Included with the powerful microcomputer is an in-circuit emulation subsystem which connects to the user's prototype to monitor the execution of the software, control the behavior of the microprocessor in the prototype, and minimize the problems encountered in integrating software with hardware. Interactive debug software—the ZAP package, provided with the emulation system—allows debugging of the prototype, full disassembly of memory data and trace information, the use of symbolic references, and the capability of placing all debug commands on disk for execution.

Z8® Emulator Z-SCAN 8

Features

- Z-SCAN 8 provides full capacity, real-time emulation for the 2K and 4K Z8 Microcomputers.
- Designed to facilitate software/hardware debugging, Z-SCAN 8 uses standard RS-232 links and is compatible with many standard CRTs and software hosts. This includes Zilog's ZEUS and MCZ systems and others with user-supplied load/save routines and cross-software support.
- Debugging is fast and convenient. Two screens display the status of the Z-SCAN 8 monitor and Z8 target resources. Target memory can be displayed and modified in a scrollable window.
- Z-SCAN 8 is interactive and easy to learn. Commands are selected from menus; command arguments are self-prompting.
- Z-SCAN 8 fulfills the user's essential real-time debugging needs with its real-time trace, two complex breakpoints, single step, and four blocks of mappable memory.

The Z-SCAN 8 Emulator is a combination of hardware and sophisticated software that allows the efficient, interactive emulation of the Z8 Microcomputers. By the simple exchange of target devices, the Z8601 (2K) and Z8611 (4K) MCUs can be emulated in a realistic mode that allows the user inspection and control over the environment being tested. Real-time trace, two breakpoints, single-step capability, and extensive mappable memory ensure the user a tool that accurately simulates the anticipated Z8 operating environment.

For Zilog Product Selector Guide, See Pages 1581-1582.

Z8® Development Module

Zilog
an affiliate of
EXXON Corporation

- **Two Z8-02 Devices Offer Complete Configuration Choice for Any Application.**
- **2048 Bytes Static RAM for Convenient Execution and Debug of User Code.**
- **On-board 2716 Socket to Test User Code in EPROM Without Additional Hardware.**
- **As Many as 2048 Hardware Breakpoints on Address Compare Cover the Entire Internal ROM Space.**
- **Versatile Monitor Software for Debugging, Register and Memory Manipulation, and File Upload and Download.**
- **'Transparent' Operation Allows Software Development Without Disconnecting from CRT and Host. Industry-Standard Interface Compatible with Most CRT Terminals and Development Hosts.**
- **Wire-Wrap Area for Prototyping.**

OVERVIEW

The Z8 Development Module is a single-board microcomputer system specifically designed to assist in the development and evaluation of hardware and software designs based on the Z8 microcomputer. It allows system prototyping in hardware with the Z8-02 prototyping device, thereby developing code that will eventually be mask programmed into the Z8 on-chip ROM.

Z8® Software Development Package

- **Structured Assembly Language with High-Level Constructs.**
- **Relocatable and Absolute Object Code Format.**
- **Free Format Statements Allow Indentation and Spacing for Readability.**
- **External Symbol References.**
- **Global Symbol Definitions.**

OVERVIEW

The Z8 Software Development Package consists of five utility programs which aid and simplify software development for Z8-based systems. Z8 PLZ/ASM, part of Zilog's PLX family, brings all the advantages of modular programming to Z8 software development. The programming task can be broken into easily managed modules, giving more work assignment options to the engineering manager and a clear-cut structure to the individual programmer. The Z8 linker completes the task by combining the modules and resolving any external references.

High-Reliability Microcircuits

Zilog
an affiliate of
EXXON Corporation

Zilog offers high-reliability versions of the Z8, Z80, and Z8000 Families of logic circuits, processed in accordance with the requirements of MIL-STD-883 Level B (Test Methods and Procedures for Microelectronics). These three families of parts are currently being qualified for inclusion in the MIL-M-38510 Qualified Products List (QPL).

General Considerations. Zilog high-reliability microcircuits are designed to meet the full military temperature range (−55°C to +125°C) and are packaged in hermetic dual-in-line packages. These packages can reliably withstand the thermal shock requirements of MIL-STD-883, Method 1011, Condition C (−65°C to +150°C). For industrial users, Zilog also offers an extended operating temperature range of −40°C to +85°C. All of Zilog's high-reliability microcircuits receive 5005 processing in accordance with the requirements of MIL-STD-883 Level B or C (as specified).

Zilog's high-reliability microcircuits are processed and assembled in accordance with the Zilog Product Assurance Program Plan, which conforms to the requirements of Appendix A of MIL-M-38510.

Zilog's Z-REL program is dedicated to the production of high-reliability components that fulfill the requirements of the Joint Army-Navy (JAN) certification program.

Along with production of state-of-the-art microprocessors, microcomputers, and peripheral components, Zilog has an on-going program to have each part JAN qualified at the earliest possible date after introduction of the commercial devices.

The Defense Electronic Supply Center (DESC) has certified Zilog as a manufacturer of JAN components. The design, manufacturing, and processing methods, screening, and exhaustive testing techniques at Zilog comply with the very stringent reliability objectives of the JAN program.

Zilog's component production tests are run on the logic test systems, with full hardware and software capabilities for accurate functional, ac and dc parametric testing. These test systems reduce the required test time, lowering the overall production costs and increasing throughput, while providing the versatility to test all LSI and VLSI components.

Once qualified, the product configuration cannot be changed unless the cognizant government agencies permit exception. Lot-oriented quality conformance inspections and periodic tests, both die- and package-oriented, are performed to maintain the product qualification.

Maintaining Reliability Levels. The high standard of reliability needed for MOS components manufactured by Zilog is assured in both the design and manufacture of each product. Zilog maintains an overall line tolerance percent defective (LTPD) of 5, or acceptance quality level (AQL) of 0.25, over the full temperature range. To ensure this continued high level of reliability, a system of quality asessment with appropriate feedback to design and process engineering on a real-time basis has been developed. The implementation of this system is an integral part of the manufacturing process.

INTRODUCTION TO MICROPROCESSOR DEVELOPMENT SYSTEMS

This section describes the tools used in developing software programs for microprocessors. Microprocessors supported range from 2-bit slice families and 4-bit processors to 32-bit machines. Development systems described in the Master Selection Guide range from simple, single-user text-editing stations to multiuser computers dedicated to software development. Manufacturers are sequenced alphabetically, and each system is described by a listing of performance parameters. These parameters include supported microprocessors, maximum user RAM, mass-memory size and type, number of user stations, and available peripheral equipment. Software tools listed range from standard executive programs to high-level language compilers and interpreters.

Detailed Product Information provided by:

Advanced Micro Devices	1701
American Automation	1706
Emulogic	1708
Fairchild	1711
Hilevel Technology	1719
Intel	1721
Motorola Semiconductor	1729
Signetics	1739
Synertek	1747
Texas Instruments	1748

The manufacturers listed above have provided detailed information on their latest and most significant products.

EINFÜHRUNG MIKROPROZESSOR— ENTWICKLUNGS-SYSTEME

Deiser neue Abschnitt beschreibt alle verwendeten Hilfsmittel zur Entwicklung von Software für Mikroprozessoren. Die unterstützten Mikroprozessoren reichen von 2-Bit-Slice und 4-Bit Prozessoren bis zu 32-Bit Maschinen. Die im Master Selection Guide beschriebenen Entwicklungssysteme reichen von einfachen, Single-user Textedition-Stationen bis zu Multiuser-Computern für die Software-Entwicklung. Die Hersteller sind in alphabetischer Reihenfolge aufgeführt, und jedes System wird durch eine Auflistung de Funktionsparameter beschreiben. Diese Parameter umfassen die unterstützten Mikroprozessoren, die Größe von verwendbarem RAM, die Massenspeicher-Größe und Art, die Anzahl der anschließbaren Stationen und verfügbare Peripheriegeräte. Die Software-Hilfsmittel reichen von Standard Executive Programmen bis zu Compilern und Interpretern für höhere Programmiersprachen.

INTRODUCTION AUX SYSTEMES DE DEVELOPPEMENT DES MICRO-ORDINATEURS

Cette Section est nouvelle cette année. Elle décrit les outils utilises dans le developpement des programmes software pour micro-ordinateurs. Les micro-ordinateurs considérés a'echelonnent des familles à 2 bits aux ordinateurs de 4 bits, et aux appareils de 32 bits. Les systèmes de développement décrits dans le Guide Général de Sélection vont de la simple station d'édition de texte pour un utilisateur, aux ordinateurs à utilisateurs multiples et dedies au developpement du software. Les fabricants sont énumérés par ordre alphabétique, et chaque système est décrit au travers d'une liste de paramètres de performance. Ces paramètres comprennent les micro-ordinateurs supportés, la RAM avec maximum d'utilisateurs, la taille et le type de mémoire de masse, le nombre de stations utilisatrices, et l'équipement périphérique disponible. Les outils software considérés s'etendent des programmes standards d'exécution aux programmes plus puissants de traduction de language et de compilation.

INTRODUCCIÓN A LOS SISTEMAS DE DESARROLLO DEL MICROPROCESOR

Esta sección, nueva para este año, describe las herramientas usadas en el desarrollo de programas para microprocesores.

Microprocesores con radio de acción de familias de 2-bit y 4-bit a equipo de 32-bit. Sistemas de desarrollo descritas en la Guía Maestra de Selección abarca de una simple estación editora, a computadoras de uso múltiple dedicadas al desarrollo de programas. Los fabricantes aparecen en sequencia alfabética, y cada sistema es descrito con una lista de parámetros de rendimiento. Estos parámetros incluyen apoyo a microprocesores, uso máximo de RAM, tamaño y tipo de memorias, número de estaciones de operadores, y equipo periferal disponsible. Programas mencionados abarcan de programas ejecutivos standard a lenguaje de alto nivel para compiladores e intérpretes.

マイクロプロセサー開発システムへの案内

本年から新たに加わったこのセクションにはマイクロプロセサーのソフトウエアプログラムを開発する為の情報が記載されています。カバーされているマイクロプロセサーは２ビットスライスファミリー，４ビットプロセサーから３２ビットマシーン迄あります。マスターセレクションガイド中の開発システムは簡単な個人が使用するテキスト編集ステーションからソフトウエア開発用多人数使用のコンピュータ迄と広くカバーされています。メーカーはＡＢＣ順に，各システムはその性能パラメーターの記載毎に説明しています。このパラメーターは必要なマイクロプロセサー，マキシマムユーザーＲＡＭ，マスメモリーサイズ，形名，ユーザーステーションの数，週辺機器等を網羅しています。

記載されているソフトウエア情報は標準エクザクティブプログラムから高級なランゲージコンパイラー，インタープリターに及んでいます。

© IC MASTER 1983

MDS: Dedicated or Universal?

Microprocessor development systems (MDSs) have evolved from simple design aids to dedicated computer systems. The variety of MDS hardware now available ranges from simple PROM programmers for entering hand-assembled code to sophisticated multiuser systems representing a sizeable capital investment.

High-end software tools generally are of no concern to designers who use microprocessors primarily for logic replacement. Many programs for these applications can be hand-written in machine code or in very simple assembly language, hand-assembled and edited manually with scissors and paste. But choosing a more sophisticated system requires understanding the relationships between the MDS, the processor it supports and the software tools available for assisting in program development.

Until recently, the choice was limited between a dedicated system supporting a single processor or a family of processors, and a universal system supporting several different processor families. Dedicated-system supporters argue that most of the 50 or more existing microprocessor companies can introduce at least one new processor each year, with each new processor often program-compatible with its predecessor. And it is more desirable to upgrade existing software for these new devices than to start a massive software redesign project.

Moreover, the argument continues, dedicated system suppliers (who also supply the microprocessors supported) can provide software development tools for new processors at least a year before they are available in universal systems. Finally, it is generally acknowledged that universality in an MDS often requires some sacrifice in depth of coverage. Implicit in these arguments, of course, is user commitment to a specific processor or vendor.

On the other hand, universal systems offer a repertoire of multivendor chip support, generally centered about 8-bit processors. The strongest argument for using these systems appears to be the freedom to evaluate the parade of new processor chips emerging from various semiconductor houses. For example, in addition to facilitating hardware/software integration of prototype design, available universal systems can compare the performance of an 8085 (Intel Corp.) against the Z80 (Zilog Inc.), 6800 or 6802 (Motorola Semiconductor Products Inc.), 3872 (Fairchild Camera and Instrument Corp.), the TMS9900 (Texas Instruments Inc.), and the 3870 and 3872 (Mostek Corp.).

To counter the threat posed by universal systems, some vendors are offering systems described as vertical rather than universal (horizontal) or dedicated. These systems support only one vendor's processors, but the devices supported represent a wide performance range. To illustrate, one MDS vendor's system supports 12 of the company's processors, which range from a 2-bit slice up through a 16-bit processor. A user can upgrade a basic system by adding an assembler, high-level language, and an in-circuit emulator module for any of the 12 processors.

Sometimes universality can be acquired with an existing dedicated MDS by upgrading the system with emulators and other development tools. Typically, the instrument connects between the host computer (or dedicated development system), using a different personality pod to provide real-time emulation for a variety of MPUs.

Multistation development systems become another option as program sizes grow. One programmer typically can generate 10 debugged and documented lines of code per day, each line representing from 2 to 10 bytes of machine code. If a time-critical project requires a 100-kbyte application program to be completed within 3 months, then at least 8 programmers are required, each generating 100 bytes of machine code per day. Such requirements need systems resembling a full-fledged computer. with price tags upwards of $100,000 and with as many as 8 programming stations.

Alternatively, several simple development systems can be linked to a mainframe to perform dedicated development functions such as compiling and debugging. The mainframe performs project management functions such as file-sharing and maintenance. If a universal system is needed, cross-software is available from both software houses and MDS vendors. Cross-software allows a program for one processor to be written on a machine containing a different processor. For example, a cross-assembler for the 6800 produces 6800 code, but it executes on a PDP-11 computer.

MDS Hardware

A typical MDS consists of a central processor, mass memory, control console, and software development tools — such as editors, assemblers, compilers and linkers — for translating the programming (source) language and revising the source text. Most systems also provide a printer for generating hard copy.

The CPU executes the control functions necessary for software development and can execute the editor, assembler or program under development.

Mass memory, also called the "file," stores operating programs, developed programs and data. Main system memory

© IC MASTER 1983

MDS: Dedicated or Universal

stores data and host programs (editor, compiler, etc.) or developed programs. Stored data include editor workspace, symbol tables, input/output (I/O) buffers, and data generated during program development. Main memory can be extended by mass memory.

The lowest level of mass-memory media is punched paper tape in which data are entered by teletypewriter. Because of its low speed, this type of storage is recommended for developing programs having less than 100 lines of code.

Next is magnetic tape cassette with read/write speeds ranging up to 400 characters per second. Tape-cassette systems are economical for programs between 100 and 1000 lines of code.

Long programs require the speed of flexible-disc storage with data-transfer rates exceeding 1000 characters per second. Flexible-disc storage is recommended for programs with between 1000 and 10,000 lines of code. Longer programs require the megabit-per-second transfer rates of hard-disc systems which can store up to tens of megabytes of data. These systems are, of course, the most expensive.

Control consoles provide the means to input source programs, debugging commands, operating system commands and data, and they provide operator feedback such as assembly listings and register displays. Controlled by interactive software, these terminals provide continually updated CRT displays of register content and entire segments of the program under development.

CRT terminals are classified as either dumb, smart or intelligent. Dumb terminals are nonprogrammable and have a limited number of functions. Smart terminals contain an MPU, memory, or both, and they have text-editing capability. Intelligent terminals contain one or more MPUs that can be user-programmed.

To facilitate text editing, CRT displays generally provide information highlighting on the screen, blinking displays, insert/delete capability and smooth scrolling. Console keyboards provide 128 ASCII character code, and keyboard life typically is about 300-million operations. Intelligent keyboards usually have self-diagnostics displayed on the CRT.

As more logic signals formerly accessible for test procedures become buried within the microprocessor chip, the various debugging tools become also increasingly important elements of an MDS.

An in-circuit emulator is a logic card or module cable-connected to the microprocessor socket of the prototype system. The emulator duplicates the processor function and relays indications of system operation to the MDS console or terminal. Usually the MDS RAM simulates ROM or PROM in the system under test. After RAM content is debugged, it is transferred to the prototype's memory.

Single-step facility is a hardware debugging aid that allows the MDS operator to step through the program one instruction at a time while concurrently monitoring system operation.

A logic analyzer can set up breakpoints in the program (such as an address) that stop program execution when encountered. The analyzer stores a block of bus transactions in a limited amount of memory that is refreshed each cycle. When a breakpoint stops program execution, the analyzer displays a number of logical events occurring prior to the breakpoint. Thus the operator can determine if events leading to the breakpoints are correct and modify the program as required, or continue execution.

Printers provide hard-copy records of the developed program. Mechanical types are relatively slow, generating from 150 to 1800 lines per minute, and providing multiple copies of the printout. Higher speeds are provided by thermal, optical, chemical or electrical printers with speeds ranging up to about 21,000 lines per minute. Serial printers produce one character at a time, and line printers generate one line at a time in parallel-character format.

Many systems provide options for linking the MDS with other systems for data exchange. These include paper tape punch and reader, and a modem (modulator-demodulator) that connects an MDS to a large computer via telephone lines. Finally, most systems have either a standard or optional PROM programmer for entering developed programs into prototype memory.

Software Tools

MDS software-tool sophistication has become similar to that of minicomputer software. Many software tools are common to any MDS.

Executive programs (also called operating systems) control the interaction between the MDS peripherals and other software tools by keeping track of time, enforcing correct event sequencing, and controlling I/O functions. An operating system also provides user commands for editing, assembling, compiling, relocating, executing, and debugging the user-developed program from the control console. Some operating systems can perform file-management tasks on floppy or hard-disc memory. Other systems provide this capability in a separate software package called a "file-management system," or include it in the text editor.

Text editors, or simply editors, are programs that allow an

© IC MASTER 1983

operator to enter a source code (assembly or higher-level language) into the MDS memory through an interactive terminal with a keyboard. Through the editor the operator can add, delete, move, change, and display or list selected portions of the source program.

Assemblers are programs that convert source code generated with an editor to machine language (object or binary code). The source code is the assembly language (alphabetic symbols called mnemonics) of the processor for which the program is being written. Assemblers vary in their ability to handle macros (blocks of often-used instruction sequences activated by a single instruction), to generate relocatable code, and to allow certain pseudo-operations. The latter is an instruction that gives information to the assembler instead of causing machine code to be generated.

Compiler and interpreter programs translate high-level programming languages into machine language. Each approach has advantages and drawbacks. Both tools translate each high-level statement into a series of binary instructions. However, a compiler translates the entire program before execution can take place. On the other hand, an interpreter translates and immediately executes each high-level statement before proceeding to the next translation.

Interpreters are more efficient for making program changes since each instruction is executed as it is typed. Therefore, an instruction can be entered, executed, changed, and executed again without the need to exercise the rest of the program. With a compiler, each change requires a retranslation of the entire program.

Although interpreters require more memory than compilers and take more time to execute the final code, they usually provide better real-time error diagnostics. However, microprocessor applications seldom require extensive programmer interaction or program debugging. As a result, a compiler generally is preferred over interpreters for time-critical microprocessor programming applications, and an interpreter is recommended for intensive interfacing or debugging requirements. Many microprocessor development systems provide both tools for overall programming flexibility.

Linkers tie together program segments and subroutines of machine code to form the finished program. Linkers calculate all module address locations so they will interface properly with one another and fit into memory.

Debuggers interactively execute and debug the object program by allowing the programmer to set breakpoints in the routine, control program execution, and examine processor register and memory content. Combined with in-circuit emulators, debuggers also allow control-line and memory-content transfer between host and prototype systems, thereby controlling the degree of emulation. Most debuggers include single-stepping and program-trace capability.

High-Level Languages

Using high-level languages (HLLs) simplifies program coding and debugging since a single statement can be translated by an interpreter or compiler into its equivalent of 20 or more assembly-language statements. Moreover, HLL statements resemble natural English and thus are easily read, documented and understood. The result is high overall programming efficiency.

Although highly convenient for a programmer, using an HLL imposes a penalty. All of the object code statements that the compiler generates for each HIL statement may not be required for every application. Consequently, high-level programs are typically 15 to 20% longer than efficient assembly-language programs. The result is wasted memory space and computer time.

However, the trends toward higher microprocessor speeds and lower memory cost tend to minimize these disadvantages, which are further offset by high programming efficiencies. Moreover, compilers based on so-called implementation languages have assembler-like characteristics, allowing programming in both high-level and assembly languages. Thus a programmer can use an HLL to design the overall program, resorting to assembly language for coding time or space-critical functions, or for coding functions that the HLL is not designed to execute.

High-level language is an increasingly fundamental consideration for selecting an MDS, the more sophisticated of which support several HLLs. In general, an HLL for microprocessor applications should have several characteristics. Foremost of these is block structuring which allows several design teams to work independently on program modules of a large project.

The language should also allow assembly-coded modules to be integrated into the basic program; provide data and register-bit handling capability such as shift and rotate; provide logical operations such as AND, OR, NAND and NOR; provide access to I/O ports and handle interrupts in real time. Also, since microprocessors are not well-suited for computation, they usually require languages that use integer arithmetic instead of floating point or decimal. Available HLLs provide these characteristics in various combinations and degrees of effectiveness.

Standard	ISIS-II disk operating system with relocating macro-assembler, linker, locater, and CRT-based CREDIT editor.	ISIS-PDS disk operating system with relocating macro-assembler, and CRT-based editor.	ISIS II disk operating system; ASM-80 macroassembler for 8080, 8085; credit editor; link and locate utilities.	ISIS operating system, credit full screen copier, macro-assembler for 8086/88 and 8080/85, linker and loader, debug-86 debugger.
Optional	iPDS-FTRANS option enables file transfer between iPDS and any Intellec Development System. PL/M, Fortran, Basic, Pascal and Cobol software packages available.	CP/M operating system on disc. Fortran/80, PL/M80, PL/M88/86 and Basic. Multiprocessor emulator functions.	PL/M-80, Fortran, Pascal, Basic, Cobol, Utilities FSP arithmetic package for 8080 and 8085; AMS-86 macroassembler, PL/M-86, link and locate utilities for 8086; assemblers for 8048 and 8089.	Pascal, Fortran, PL/M, Cobol, Basic, assemblers for 8089, 8048, 8051 families, utility packages for 8080/85/86/87/88/89 support mainframe link software.
Comments	Self-test diagnostic capability, built-in interfaces for high-speed paper tape reader/punch, printer and universal PROM programmer. iMDX557, iAPX resident processor card package is available to upgrade existing iMDX225 series II Development System to Series III. This package supports development of iAPX86/88 processors.	Portable, dual processing capability, expandable using multimodule cards. Bubble memory option.	In-circuit emulators for all CPUs.

Manufacturer Model FOR DETAILED DATA SEE:	Intel NDS-I Network Development	Intel NDS-II (Page 1723)	Kontron/Future Data KDS	Kontron/Future Dat 2300
Supported CPUs	8081A, 8085A, 8086, (iAPX86), 8088 (iAPX88), B089, 8021, 8022, 8041A, 8741A, 8035, 8048, 8748, 8039, 8049, 8051	Work station dependent	8086, 8087, 8088, 8085, 8080 68000, 6809, 6809E, 6502, 6507, Z80B, Z8001, Z8002, NSC-800	8086, 8087, 8088, 8085, 8080, 68000, 6809, 6809E 6802, 6800, 6502, 6507, Z8001, Z8002, Z80B, NSC-800
Hardware				
User Stations	1 network manager, 8 workstations (Series II/III)	One network manager and up to 8 work stations (Series II/III and Model 800 development systems) per link	16	8
Communication Ports	2 serial RS232/4 parallel I/O per station	Two Centronics type parallel ports, 1 RS232C serial port and 1 expansion port for additonal hard disk	4 RS-232, 1 Parallel	2 RS-232, 1 Parallel
User RAM			256K bytes	596K
Mass Storage	Central hard disk, 7.3 Mb, 14.6 Mb Floppy disk, 250 Kb, 2.5 Mb	35M byte Winchester hard disk, expandable up to 320M bytes. Model 740 cartridge disk 10M byte (5M byte fixed, 5M byte removable)	Dual floppies, 1.2M byte, Hard Disk, 5, 10M byte	Dual floppies, 2M byte, Hard Disk, 35M byte
Logic Analyzer	No	No	64 Channel, State and 100 MHz Timing	64 Channel State
PROM Programmer	Optional	No	Universal	Universal
Printer	Optional	No, parallel ports supplied for hardware interconnect	Optional	Optional
Software Support				
Standard	ISIS operating system at workstations, MDS-I operating system at network manager.	High level language debugging network, management tools, export/import software, Ethernet Protocall.	CP/M operating system, macro assembler, editor linker, emulation support, mainframe link.	UDOS operating system, editor, macro assemblers emulation support, mainframe link.
Optional			Basic, Fortran, Pascal for system programming; PASCAL compiler for development; 3rd party CP/M software.	Basic, Pascal compilers for development.
Comments	Network manager provides shared hard disk and printer spooling for use by up to 8 stations.	Network resource manager provides shared Winchester hard disc, Model 740 cartridge disks and spooled line printer interface for work stations. All existing Intel development systems can be upgraded to be NDS-II work stations. Work stations communicate with the network resource manager via 10M bit Ethernet or local net interconnected with coax.	Ergonomic terminal, distributed computing and central mass storage for multi-users, multi-processor emulation.	Simultaneous multi-position emulation.

Manufacturer Model FOR DETAILED DATA SEE:	Monolithic Systems MSC8801	Monolithic Systems MSC8802	Motorola EXORciser II (Page 1735)	Motorola EXORset DS35 (Page 1735)
Supported CPUs	8089, Z80	8080, Z80	6800 or 6809. Opt. 6801, 6802, 6805, 146805, 3870, 141000	M6800, M6801, M6805, M6809. Optional hardware for M6805/M146805 families
Hardware				
User Stations	One	One	One	One
Communication Ports	Two RS232C serial	5 serial, 1 parallel	1 serial expandable by 1 serial/2 parallel modules	RS232C
User RAM	64K bytes	80K bytes	64K bytes	56K bytes RAM
Mass Storage	Two 8-inch double-density floppy disk drives solid state disk simulation	Solid state disk emulation two 8-inch double-density floppy disk drives optional Winchester	Floppy disk, 2M bytes	328K bytes minifloppy disk storage
Logic Analyzer	No	No	No	
PROM Programmer	No	No	Optional for over 6 types of PROM, EPROM	Optional
Printer	Yes	Yes	Centronix 702, 703	Optional
Software Support				
Standard	CP/M 2.2.	CP/M 2.2.	MDOS disk operating system, macroassembler with linking and loading editor, cross-assemblers, cross-simulators available for each MPU.	XDOS operating system, linking loader, CRTeditor, Basic-M, compiler/interpreter, Basic-M run-time package, disk resident.
Optional	XY Basic, Microsoft Basic, Pascal/M, Z-SID, MAC, 32 or 64 floating point APU. Any CP/M compatible.	CP/NET, MP/M, XY Basic, Microsoft Basic, Pascal/M, Z-SID, MAC, 32 or 64 floating point APU, 8-inch Winchester drive package. Any CP/M compatible.	Fortran, Cobol, Basic, MPL, Pascal.	Pascal, Setcom (serial communications.
Comments	Includes power supply, 7-slot multibus chassis, MSC-8009A Z80 CPU, 64K byte RAM, up to 32K EPROM, floppy disk controller, two Shugart 801R disk drives.	Includes power supply, 7-slot multibus chassis, up to 32K EPROM, floppy disk controller, two Shugart 801R disk drives. MSC-8009, Z80 CPU, 16K RAM; MSC8007A, Z80 CPU, 64K RAM.	Optional real-time trace. EXORterm 155 adds video display and keyboard entry capabilities to the basic EXORciser.	EXORset fills the gap existing between very low-cost evaluation kits and high-end EXORciser-based systems.

Manufacturer Model FOR DETAILED DATA SEE:	Motorola HDS-200 (Page 1731)	Motorola HDS-400 (Page 1732)	Motorola M68000 (EXORmacs) (Page 1733)	National Starplex
Supported CPUs	M6805P2, P3, P4, R2, R3, U2, U3, T2, M146805E2, F2, G2	MC68000	MC68000, 68010, 6800, 6809, 6802, 6805, 146805, 6801, 68120	8080, 8085, 8048, 3049, 3050, 3070, Z8
Hardware User Stations	One	One	Two standard; up to 8 optional	One
Communication Ports	1 Host, 1 Terminal	1 Host, 1 Terminal	2 serial RS232	N/A
User RAM	8K bytes	32K bytes	256K bytes expandable to 16M bytes	64K bytes
Mass Storage	In host	In host (EXORmacs)	Floppy disk, 1M bytes, 2M bytes. 16, 32, 96M bytes hard disk	Dual floppy, 512K bytes
Logic Analyzer	No	Yes	Optional	No
PROM Programmer	In host	In host (EXORmacs)	Optional for over 60 types of PROM, EPROM	Optional
Printer	In host	In host (EXORmacs)	Optional	No
Software Support Standard	In host.	Same as host (EXORmacs).	VERSAdos multitasking, real-time, multiuser, logical I/O file management; Pascal compiler; macro and linking assembler; page, screen and file-oriented editor, symbolic debugger.	Disk operating system; Fortran compiler; Basic interpreter; on-board ROM diagnostics, utilities.
Optional			Fortran IV.	Text editor, cross-assemblers.
Comments	Operates as a remote hardware/software development station to a host such as EXORmacs, EXORset, EXORciser.	Operates as a remote hardware/software development station to EXORmacs.	Optional real-time trace; ROM, RAM and disk autotest at power-on; board-level fault isolation.	Optional in-circuit emulators for 8048, Z80; personality modules; Starplex-to-Intel MDS link.

Supported CPUs	NSC800, INS8070, INS8048, INS80C48, 8080, 8085, Z80, COP400	Z80-A	Z80, NMOS	1802, 1804, 1805, 1806, 6805C
Hardware User Stations	One	One		One
Communication Ports	Two RS232	3 Serial, 1 Parallel	2 or 3 (8 bit Parallel) 1 or 3 (RS232C)	RS232
User RAM	128K bytes	64K byte Standard	16 to 65K byte	64K bytes
Mass Storage	1 Mb dual double-density floppy disk	400K byte (two 5¼ floppys)	Optional 400K byte/100M byte	Dual floppy, 512K bytes
Logic Analyzer	No	—	No	Optional
PROM Programmer	Optional	Yes (consult factory)	Yes	Yes
Printer	Optional	Optional	Interface optional	Yes Centronics interface included
Software Support Standard	Disk-based operating system, debugger, text editor, assembler, linker, Fortran, Basic, utilities and diagnostics.	CP/M 2.2 disk operating system with Quay utilities.	Monitor; including display & alter memory contents, dynamic breakpoints with register dumps, program countertracts single stepper and PROM programming.	Disk operating system, level I, II assemblers, macro-assembler, full-screen editor.
Optional	PL/M, Pascal.	⅝ converter cable for 8" drive IBM 3740 format compatibility. Number of Developmental and Applications software pcakages available.	Basic, Cobol, Fortran, CP/M operating system, assembler, text editor.	CDSIV Resident: Basic 1: Fixed-point interpreter/compiler; Basic 2; floating-point interpreter. PL/M 1800: Compiler microconcurrent Pascal compiler/interpreter (cross-software). 6805C Assembler.
Comments	Starplex II support packages are identical to those of Starplex.	Packaged system with CRT/terminal included.		Includes micromonitor, real-time in-circuit debugger; interface to CRT/keyboard terminal.

Supported CPUs	68000, 8 MHz	6500	Z8, 6500	8080A 8085A, Z80A, 1802, 6800, 6802, 0900, F8, 3870, 3872, 8048, 8049, 8021, 8035, 8039-6, 8086/88, Z800
Hardware				
User Stations	One minimum, additional depend on host computer capability	One	One	One
Communication Ports	4 Serial RS-232, Serial Printer Interface, Centronics Parallel Printer Interface	For printer, video, serial communications RS232	3 serial/2 parallel	Standard I/O port, 3 RS232-compatible ports
User RAM	64K bytes, mappable to system under development	4K bytes	2K bytes	32K bytes expandable by 16 or 32K byte modules
Mass Storage	None	—	Two 8-inch floppy disks	Floppy disk, 630K bytes
Logic Analyzer	No	No	No	Optional
PROM Programmer	Optional, Interface Supplied	EPROM	Optional for 2716, 2737, 2532 EPROMs	Optional for 2704/2708
Printer	Optional, Interface Supplied	No	No	Optional
Software Support				
Standard	Routines to execute and debug software for the 68000. ROM resident debugger features include execution of breakpoints, examine and modify registers, modify program via line oriented assembler/disassembler.	Monitor with debug, assembler/editor in ROM.	Pascal-based operating system with screen-oriented editor and file-management system; universal assembler with macro and conditional directives; ROM-based mini-debugger.	Disk operating system; text editor, assembler, debuggers; file utilities; linker supervision.
Optional	SMSFT16000 S68000 cross software/Pascal cross compiler and SMSFT10000. S68000 cross software/macroassembler available for VAX-11, PDP-11 or LSI-11/23 host computers.	Floating-point Basic.	Debug cards with 4 breakpoint registers; assemblers for 6800, 6809, Z80, 8080, 9900 and LSI-11.	Assembler for all MPUs; debuggers for 8086, Z8000, 68000; HHL for 8080, 8085, Z80, 6800; MDL/U compiler.
Comments	Host computer generated object code is downloaded to the SMDEV1000 RAM memory via host resident upload/download software. SMDEX10000 resident assembler/disassembler allows translation of existing hex values of machine code into readable mnemonics or creation and insertion of new 68000 instructions into the routine being tested. Final program is uploaded to host computer. RAM memory test executed on power on.	Hardware compatible with EXORciser bus.	ROM-based RAM/disk diagnostics.	Extension English diagnostics; optional TTY, CRT, computer display terminals.

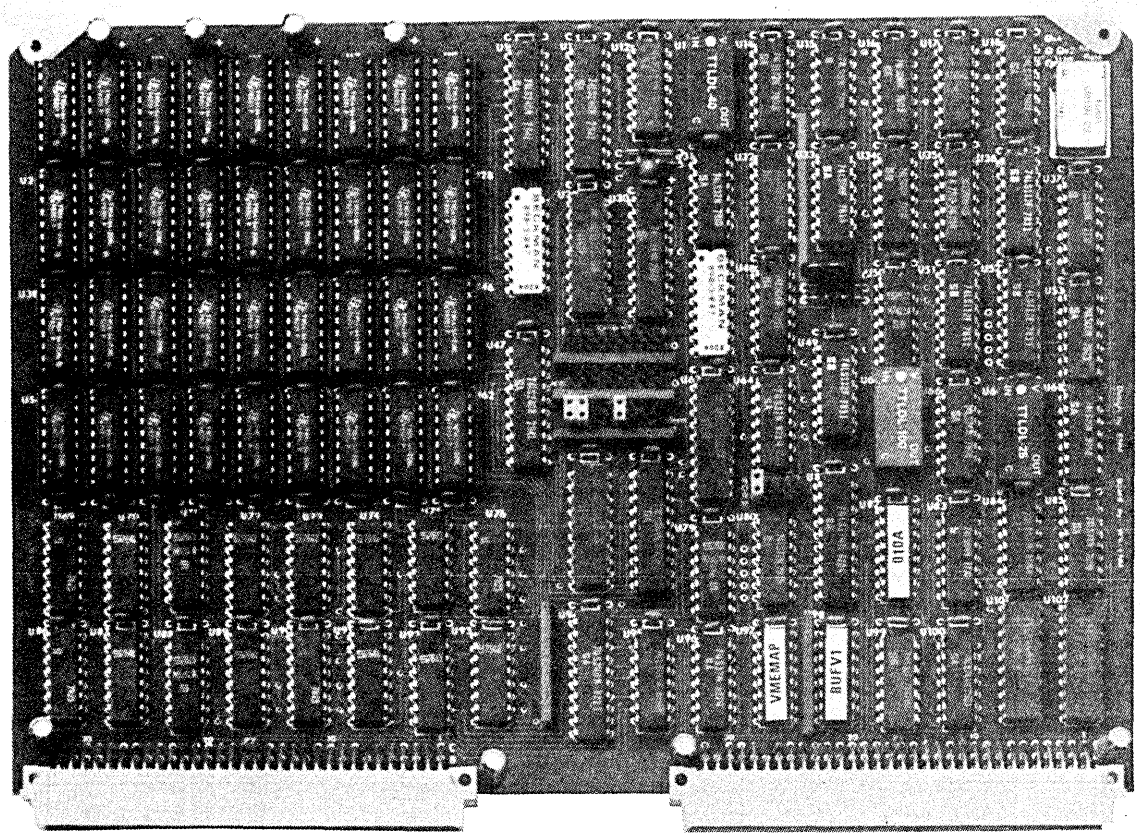
For Key Data On Every IC On This Board, The Place To Look Is...



This Signetics Memory Module provides 256K bytes of dynamic random access memory, plus parity protection.

Equipment and system design often require the use of a wide variety of integrated circuits in order to obtain optimum performance. One way for an engineer to be certain that he hasn't overlooked the best device for his application is to refer to the pages of IC MASTER.

Surveys conducted by IC MASTER, integrated circuit manufacturers, and independent research agencies confirm that four out of five IC MASTER users have specified one or more products as the result of using IC MASTER.

Device No.	Description
74LS00	Quadruple 2-Input NAND Gate
74LS08	Quadruple 2-Input AND Gate
74LS04	Hex Inverter
74LS20	Dual 4-Input NAND Gate
74LS32	Quadruple 2-Input OR Gate
74LS37	Quadruple 2-Input NAND Buffer
74LS24	Schmitt Trigger
74LS74	Dual D-Type Edge-Triggered Flip-Flop
74LS132	Quadruple 2-Input Schmitt Trigger
74LS112	Dual J-K Edge-Triggered Flip-Flop
74LS10	Triple-3-Input NAND Gate
74LS244	Octal Buffer/Line Driver
74LS645	Octal Bus Transceiver
AM25LS2521	8-Bit Equal-to Comparator
74S38	AND/NAND Gate
N7411	Triple-3-Input AND Gate
N74S40	Dual 4-Input NAND Buffer
TMS4164	64K Dynamic RAM
7641	512 x 8 PROM
7642	1K x 4 PROM

Representative list of ICs on Signetics SMVME3100 Memory Card. Key specifications for all of these ICs can be found in IC MASTER.

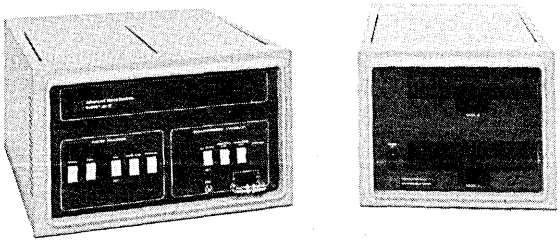
MICROPROCESSOR DEVELOPMENT SYSTEMS

AmSYS™ 29/10
Microprogram/Bit Slice Development System

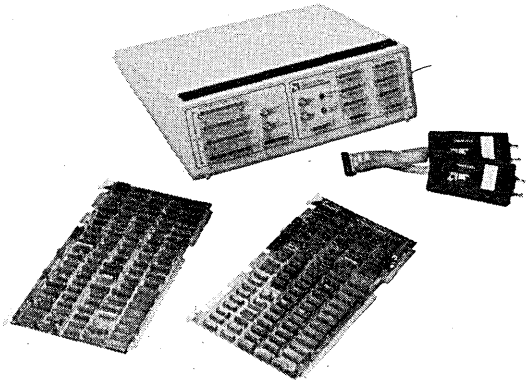


Features

- ☐ Complete floppy-disk based Microprogram/Bit Slice Development System
- ☐ AMDASM meta-assembler for microcode language definition and source file assembly
- ☐ Full speed (10MHz) Microprogrammed Controller for microcode and hardware integration
- ☐ Higher speed (35ns) writable control store for real-time microcode emulation
- ☐ Optional High-Speed Trace provides integrated 10MHz logic state analyzer with 48-bit input
- ☐ AMDOS29 disk operating system (CP/M† 2.2 compatible)
- ☐ Dual single/double density floppy disk system provides 1M byte storage

†CP/M is a trademark of Digital Research

Am29/6310
High-Speed Trace



Features

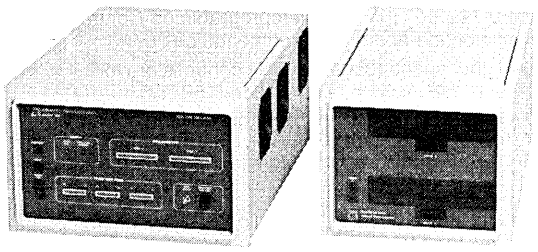
- ☐ Provides logic analyzer capability for 2900 Family bipolar designs
- ☐ Plugs into AmSYS™29/10 Microprogram Development System
- ☐ 10MHz (100nsec) event storage capability
- ☐ Event storage unit of 48 x 256 words, expandable to 96 bits
- ☐ 32-bit Trace Time Tag records event occurrence time
- ☐ Eight general purpose 48-bit triggers, expandable to 96 bits
- ☐ Adds eight hardware breakpoints to AmSYS29/10 clock control logic
- ☐ Software integrated with microprogram debug software (DDT29) on AmSYS29/10

© IC MASTER 1983

Advanced Micro Devices

MICROPROCESSOR DEVELOPMENT SYSTEMS

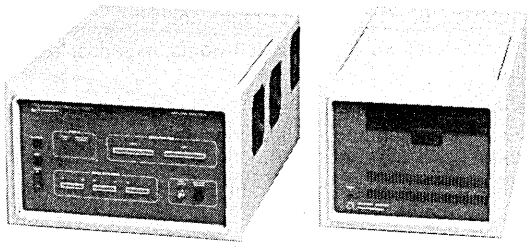
AmSYS™ 8/8112
AmZ8000 Microprocessor Development System



Features

- ☐ Complete microprocessor development system for AmZ8001 and AmZ8002 microprocessors
- ☐ High-performance 4MHz 8085A-2 CPU
- ☐ 128K bytes RAM
- ☐ 1M byte (expandable to 11M bytes) of disk storage on two double-density floppy disk drives
- ☐ Serial interfaces for optional CRT, printer, or PROM programmer
- ☐ Built-in parallel interface for printer
- ☐ Self-test diagnostics
- ☐ Accomodates the RTE16/8050A Real-Time Emulator Support Package for the AmZ8000
- ☐ Complete AmZ8000 software support, including a relocatable macroassembler, linker, and 8-bit-to-16-bit source code translator
- ☐ Powerful CP/M-compatible AMDOS8 operating system
- ☐ Supports C and PASCAL high-level languages for AmZ8000 microprocessors
- ☐ Includes relocatable macroassemblers for 8080A, 8085A, and Z80A microprocessors

AmSYS™ 8/8116
AmZ8000 Microprocessor Development System



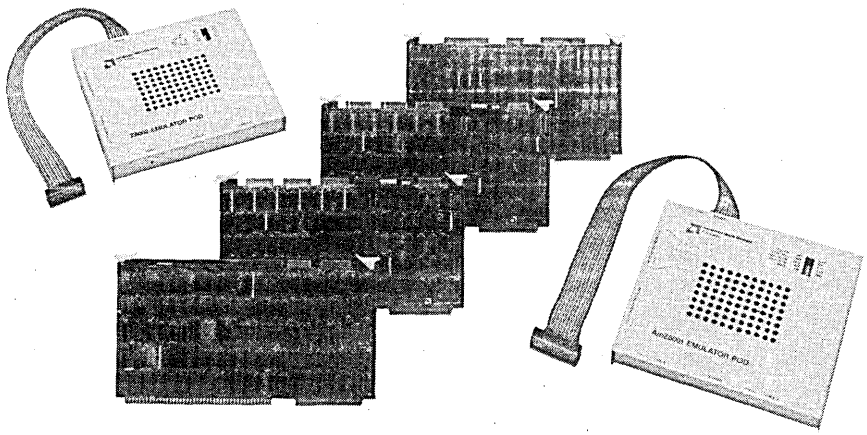
Features

- ☐ Complete microprocessor development system for AmZ8001 and AmZ8002 microprocessors
- ☐ High-performance 4MHz 8085A-2 CPU
- ☐ 128K bytes RAM
- ☐ 10.5M bytes of disk storage on 8" Winchester and double density floppy drive
- ☐ Serial interfaces for optional CRT, printer, or PROM programmer
- ☐ Built-in parallel interface for printer
- ☐ Self-test diagnostics
- ☐ Accomodates the RTE16/8050A Real-Time Emulator Support Package for the AmZ8000
- ☐ Complete AmZ8000 software support, including a relocatable macroassembler, linker, and 8-bit-to-16-bit source code translator
- ☐ Powerful CP/M-compatible AMDOS8 operating system
- ☐ Supports C and PASCAL high-level languages for AmZ8000 microprocessors
- ☐ Includes relocatable macroassemblers for 8080A, 8085A, and Z80A microprocessors

© IC MASTER 1983

MICROPROCESSOR DEVELOPMENT SYSTEMS

RTE 16/8050A
Real-Time Emulator Support Package



Features

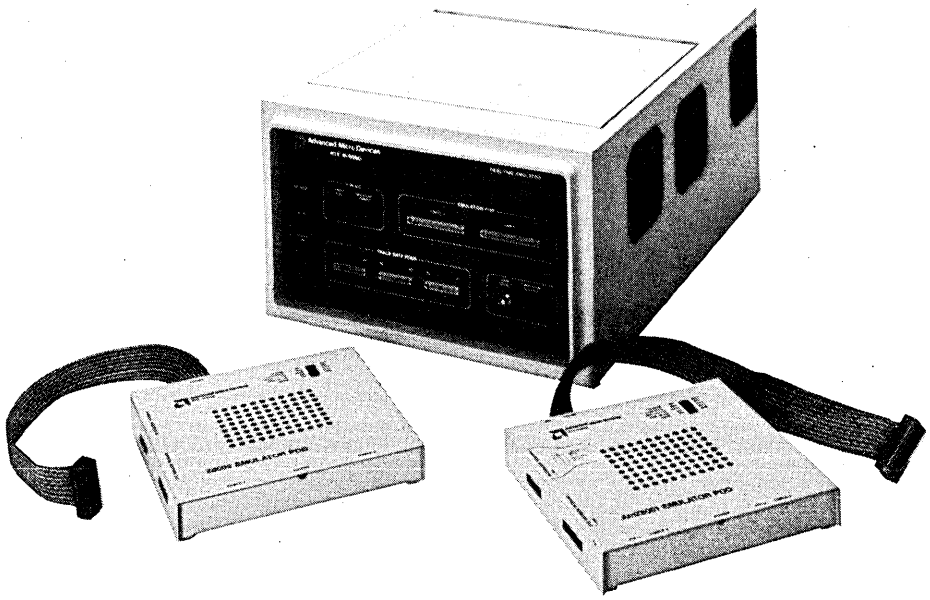
- ☐ 6MHz real-time in-circuit emulation for segmented AmZ8001 and nonsegmented AmZ8002 microprocessors
- ☐ Full-speed emulation and single-step program execution with or without target hardware
- ☐ Concurrent display of CPU status, registers, PC, NPSA pointer, stacks, and memory
- ☐ Powerful screen-oriented operator interface with single-keystroke commands
- ☐ User-selectable memory wait states
- ☐ 1M byte memory map located within a 16M byte address range that allows intermixing of target and emulation memories on any 1K byte boundary
- ☐ Four high-speed state comparators for simple address equal breakpoints and ROM program patch
- ☐ Eight multipurpose high-speed state comparators for complex breakpoints and real-time trace control
- ☐ Multilevel sequences and three trigger modes for complex control of real-time trace
- ☐ Trace snapshot capability without stopping emulation

© IC MASTER 1983

Advanced Micro Devices

MICROPROCESSOR DEVELOPMENT SYSTEMS

RTE 16/8060
Real-Time Slave Emulator



Features

- ☐ Attaches to any foreign host having RS-232 port
- ☐ UNIX™ and RSX11M™ has resident file download/upsave programs, written in C and Fortran, respectively, provided in source and object form on 9 track 800 bpi tape and 8″ DEC RX01 floppy disks
- ☐ Communications protocol fully documented in User Manual
- ☐ Separate emulator programs provided to support AMD or Zilog, Z8000 instruction Syntax
- ☐ Intel HEX to AMD BIN file format conversion program provided for UNIX and RSX11M hosts
- ☐ Users provide cross-compilers and/or cross-assemblers that output Intel HEX files
- ☐ Cross-software available from third party sources
- ☐ Full speed 6MHz real-time, in-circuit emulation of segmented AmZ8001A or unsegmented AmZ8002A target system microprocessor with no wait states
- ☐ Screen-oriented single-key commands with concurrent displays of CPU status, registers, NPSA pointers, program counter, and memory
- ☐ 8 to 264K Bytes of no-wait-state SRAM or up to 512K Bytes of two wait state DRAM expansion with user-selectable wait state commands
- ☐ 1 MByte memory map within 16 MByte address range allows intermixing of target and emulation memory on any 1K Byte boundary
- ☐ Four 16 or 23-bit high-speed state comparators for simple address equal breakpoints and ROM patches
- ☐ Eight 46-bit multi-purpose comparators for breakpoints, trace triggers, and event qualification
- ☐ Up to eight ordered sets of logically OR'd comparators compared with sequential bus events and three trigger modes to start and stop trace
- ☐ Comparator qualified bus bit-patterns recorded in 46-bit wide by 256 circular trace buffer
- ☐ Trace expansion option adds 48 external probes, increases trace buffer and comparators to 94-bits, and allows 16 of these bits for time-stamping
- ☐ Separate system, emulator, and trace buses allow tracing without inducing extra emulation wait states

UNIX and RSX11M are trademarks of Bell Labs and DEC, respectively.

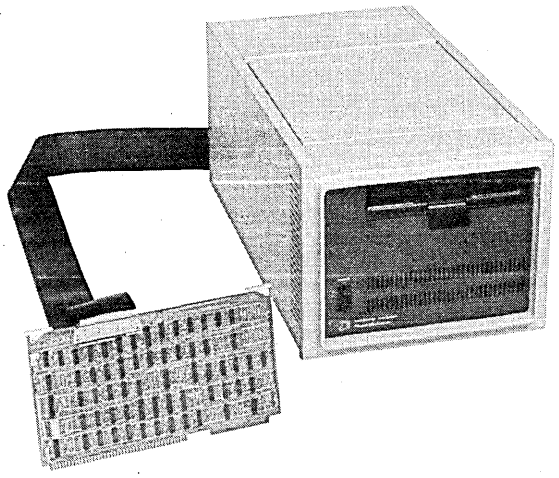
Advanced Micro Devices

MICROPROCESSOR DEVELOPMENT SYSTEMS

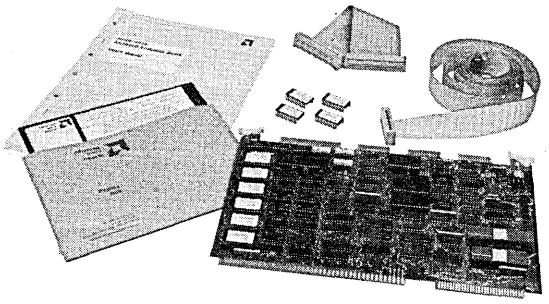
Am8/9016
Winchester Mass Storage Subsystem



Features

- ☐ Includes 10M byte 8" Winchester drive, 8" double-density floppy, integrated controller and Multibus† adapter
- ☐ Software and hardware compatible with AmSYS™8/8 Development Systems
- ☐ Fixed drive
  - 10.7M byte (unformatted) storage capacity
  - Same physical size as floppy disk drive
  - Same environmental characteristics as floppy disk drive
  - Winchester head and media technology
  - 4.34M bits/second transfer rate
- ☐ Floppy drive
  - 256K or 512K byte storage capacity
  - Used as back-up for Winchester
- ☐ Disk drive controller
  - Controls up to four drives
  - Data error sensing and autonomous correction
  - Resident microdiagnostics
  - 256 data byte sectors standard for fixed disks
  - IBM compatible track formats for floppies
  - Software density selection

Am96/4018
AmZ8000 Evaluation Package



Features

- ☐ AmZ8001 Microprocessor (4MHz)
- ☐ AmZ8002 Microprocessor (4MHz)
- ☐ 8K bytes on-board RAM
- ☐ AmZ8001 and AmZ8002 monitors with breakpoint, single step, up/download commands
- ☐ Buffered CPU bus available at edge of board
- ☐ 2 programmable serial I/O ports (RS 232C and 20mA)
- ☐ Programmable counter/timer
- ☐ 24 programmable I/O lines
- ☐ Line-by-line assembler/disassembler in EPROM
- ☐ I/O cable and diskette for up/download to AMD Development System
- ☐ Multibus† form factor
- ☐ Cable to connect CRT terminal

Development Support where you Need It.

EZ-PRO™ is a microprocessor development system designed for pros by pros.

EZ-PRO Building Blocks. Our modular system supports your development project, small or large. For 8- or 16-bit processors, start with our Basic Development Unit (32 KB of 100 ns SRAM) and appropriate In-Circuit Emulator (totally transparent, no wait states), and add the Memory Expansion Modules, Dual Disk Unit, and EPROM Programmer you need.

For bit-slice processors of any type, assemble a system that meets your exact specs. Our line includes a Bit-Slice Kit, Interface Modules, ECL or TTL User Interface Modules, Memory Modules, and ECL or TTL PROM Programmers.

EZ-SOFT™**User-friendly Programs.** Our menu-driven operating software is included with the hardware. In addition to a sophisticated DOS, the Basic Development Unit comes with a PROM-resident monitor, superlative screen editor, and disk formatter. Each emulator is provided with a relocating macro-assembler, linking editor, and debugger.

EZ-PRO Production Testing. Your development system can also be used for unattended final test of manufactured units, as they come off the assembly line. And that's cost-effectiveness.

EZ-PRO has the Edge. It's the growing edge. Our elegant systems **support more processors than any competitor.** And because microprocessor development technology is our only business, we offer customers complete hardware and software support for their EZ-PRO systems.

Call to discuss a single- or multi-user system, or write today for complete technical data. American Automation, 14731 Franklin Avenue, Tustin, California 92680, (714) 731-1661. Telex II: 910 595-2670 AMAUTO TSTN.

Key specifications for all of these ICs can be found in IC MASTER.

IC MASTER

BE SURE. BEGIN WITH THE IC MASTER

The Emulogic® ECL-3211.

The ECL-3211 is a high performance, universal microprocessor development system. It incorporates all basic functions necessary for software development and high speed in-circuit emulation for virtually any microprocessor from 4-bits to 32-bits.

The ECL-3211 uses a standard DEC PDP-11 16-bit minicomputer for control, computation, display, and system communication functions. All emulation functions, map, offset, break, and trace, are performed by Emulogic hardware and software.

Building on standard DEC CPU's, peripherals, and operating systems, the ECL-3211 offers field-proven DEC hardware/software, worldwide service, and Emulogic's high-performance general emulator system.

System Configurations.

Single-User. The standard ECL-3211 is a stand-alone system with VT101 terminal, LSI-11/2 CPU, 64KB, 1MB dual floppy disks (and/or RL02 hard disks). This basic unit can accommodate any of the emulation support packages, and includes RS-232 serial line units for communication with other systems.

Multi-User—Host/Satellite System. The ECL-3211 may be used as a hardware/software workstation on a DEC or non-DEC host. It can function both as a dumb terminal on the host via a pass-through feature and as an independent workstation with file transfer capabilities between host and satellite. Use of a non-DEC host may require the user to provide some driver software.

Multi-User—Virtual Disk System. A multi-station hardware and software development system can be configured using any of several DEC host computers with standard multi-user operating systems and several hardware/software and software-only workstations. The exact number depends upon the operating system capabilities and the type of usage.

Software stations (VT101 terminals) are connected to the host via RS-232 lines. Hardware/software stations, consisting of ECL-3211 systems equipped with virtual disk interfaces instead of local disk storage, are connected to the host via a 1-megabaud multi-drop coaxial cable bus.

The virtual disk link between workstation and host gives each hardware station high speed access to the common hard disk storage of the DEC host.

Multi-Chip Emulation Systems. Simultaneous emulation of multiple chips can be accomplished in two ways:

1. Cross-connecting external inputs and outputs of pods in multiple ECL-3211 systems—breakpoints in one system activated by trap conditions in other systems.

2. Specifying the ECL-3211 Single-Terminal Multi-Chip Emulation System. This system, a simple upgrade for standard ECL-3211 single emulator systems, performs full-feature simultaneous emulation of up to 4 chips of any type.

Chips Supported.

Support is offered for the following chip families:*

8-bit		16-bit
8048	6502	8086/87
Z80	6809	68000
8085	8088/87	
NSC800	8080	

Additional chip support packages will be introduced in 1983. Check Emulogic for your particular chip.

*Check Emulogic for availability.

.© IC MASTER 1983

The best microprocessor development system you can get.

Any speed. There is simply no other development system today that can offer the speed and performance of the ECL-3211. It can achieve true, full-speed emulation of any target system today, regardless of chip. It will not degrade target performance or require compromise or interpretation of results during emulation. It is genuinely transparent to the target.

Lots of emulation memory. ECL-3211 systems are supplied with at least 65KB DEC dynamic RAM, some of which may be used for emulation memory, and some high speed static RAM emulation memory.

Extra high speed static RAM may be added in 8KB or 16KB modules. For low-cost emulation memory, an extra 65KB of DEC dynamic RAM may be specified.

Full-range mapping. The full address range of each chip can be used for mapping, breakpoints, and trace. And with proper memory you can run at full rated speed in any mapping configuration.

World's most powerful breakpoints. Eight independent hardware breakpoints are standard with every system. Each can perform multiple, simultaneous actions whenever a set of logical trap functions is met. And all breakpoint functions are transparent to your target. Prioritization of breakpoints lets you "break on non-event" or set up "safety net" trap conditions.

Phantom injection. A "phantom" breakpoint feature allows the user to jump to program patches with no in-line code changes. Eight phantoms are provided (one per breakpoint).

Intelligent, real-time trace. A 511 x 72-bit breakpoint-controlled trace buffer captures all bus activity including instruction, data, DMA, and co-processor transactions—in real time and at full speed of the chip. The trace disassembler accurately and unequivocally identifies each item, including instructions purged from a queue.

Counters. Two high-speed counters count from +31-bits to −31-bits. The counters can be independently sourced by target machine cycles, instruction cycles, target time base, or breakpoint actions. Each can be independently enabled/disabled/decremented as a breakpoint action, and the status of each may be sensed as a logical breakpoint condition. In addition, each may be automatically re-initialized at the start of each emulation cycle.

Target Time Base. Target time base can be sourced from either the internal synthesizer in the ECL-3211, or the user's time base. The setting resolution of the synthesizer is 0.1% typical. Long term standard deviation is less than 100 ppm. The synthesizer is a convenient tool for stress-testing the user's target.

Full-Screen Auto-Update Display. Automatically updated full-screen displays present all status information to the operator at the end of each step or emulation cycle. Split-screen smooth scrolling lets the operator scan through the trace buffer in easy-to-read form.

Cursor Control Screen Editing. Keypad cursor control permits the operator to alter the contents of registers, memory, or breakpoint conditions directly on the screen as an alternative to keyboard command entry.

Software.

DEC Operating Systems. RT-11 is standard for single-user systems and RSX-11M is optional for some systems. Other standard DEC software, such as FORTRAN, BASIC, DIBOL, etc., is available for non-emulation functions.

Keypad Editor. The editor is a full screen-oriented keypad editor.

Cross-Assemblers. Emulogic macro-relocatable cross-assemblers are supplied for each chip supported. Each uses the mnemonics of the chip manufacturer and the pseudo-ops and directives of MACRO-11.

Linker. Linker converts relocatable object modules into run-time format, converts relative addresses to absolute addresses, and links global references.

Symbolic Debugger. A symbolic debugger is provided for each chip supported.

PROM Burner Utility. Providing for printing and editing of ROM MAP files, the PROM burner utility converts object code to a variety of formats for various PROM programmers.

Memory Disassembler. Included with each chip package, this utility displays disassembled instructions as they appear in memory—a convenient tool for checking a patch or for reading a program from memory. The disassembled code can also be output to a printer.

Cross Compilers. PASCAL and "C" cross-compilers are available for several chip families.

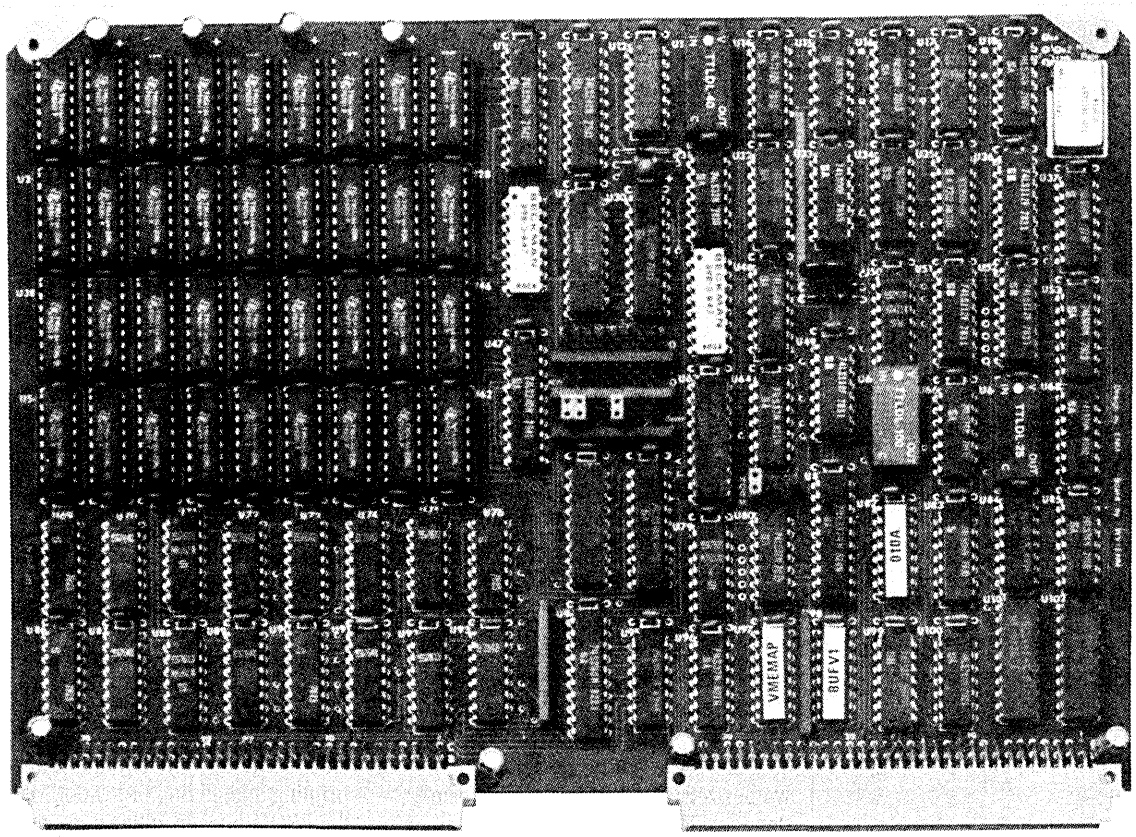
For Key Data On Every IC On This Board, The Place To Look Is...



This Signetics Memory Module provides 256K bytes of dynamic random access memory, plus parity protection.

Equipment and system design often require the use of a wide variety of integrated circuits in order to obtain optimum performance. One way for an engineer to be certain that he hasn't overlooked the best device for his application is to refer to the pages of IC MASTER.

Surveys conducted by IC MASTER, integrated circuit manufacturers, and independent research agencies confirm that four out of five IC MASTER users have specified one or more products as the result of using IC MASTER.

FAIRCHILD
A Schlumberger Company

FS-I
Fairchild System-I

Microprocessor Product

Description

The Fairchild System-I (FS-I) is a versatile, multi-user development system designed to support software development and hardware prototyping for applications using Fairchild microprocessors, including the F8, F3870, F6800, F6809, F9445, F16000, and such upcoming microprocessors as the F9450.

Three principal versions of the FS-I are available: The FS-I Standard System, the FS-I Multi-User System, and the FS-I Entry-Level System. Numerous software and hardware options are available that operate under Fairchild's Interactive Multi-User Disk Operating System (IMDOS). The FS-I also supports the in-circuit emulation and tracing (EMUTRAC™) system for the F3870, the F6800, F6809, and the F9445 microprocessors.

Standard System

System features include:

- **CPU with 128K-Byte RAM and F9445 Instruction Set.**
- **A Winchester and a Double-Density Floppy Drive Provide Approximately 10M-Byte of Mass Storage.**
- **I/O Controller Board Provides Winchester/Floppy Disk Controller Interface.**
- **Nine Asynchronous Serial RS-232C Ports (Up to 19.2K Baud) Provide Support for CRT Terminal, Optional Letter-Quality Printer, Modem, and Other Serial Devices.**
- **One Synchronous Serial RS-232C Port (Up to 19.2K Baud) and Selectable Protocols, such as BISYNC, DDCMP, SDLC, and HDLC.**
- **PROM Programmer Port to Interface to the Optional Fairchild PROM Programmer Unit.**
- **Parallel Printer Port (Centronics-Compatible Interface).**
- **Programmable Real-Time Clock.**
- **One CRT Terminal.**
- **Single-User Version of IMDOS, System Processors, and System Utility Programs (see "System Software").**
- **BASIC Language Interpreter with Interface to Custom F9445 Assembly Language Programs.**
- **FS-I Diagnostic Programs.**
- **Provides Full Support for the F9445 and for the PEP 45 Microcomputer System.**
- **Hardware and Software Upgradable to Multi-User System.**
- **EMUTRAC Can Be Added to the Standard System.**

Multi-User System

System features include:

- **Fully Equipped for Four Timesharing Users (Expandable to Eight Simultaneous Users with Additional Terminals and Cables).**
- **A 16-Bit CPU with 128K-Byte RAM and F9445 Instruction Set.**
- **A Winchester and a Double-Density Floppy Drive Provide Approximately 10M-Byte of Mass Storage.**
- **Memory Management and Protection Unit (MMPU) Board with 384K Bytes of RAM (Gives the System 512K Words of RAM).**
- **I/O Controller Board Provides Winchester/Floppy Disk Controller Interface.**
- **Nine Asynchronous Serial RS-232C Ports (Up to 19.2K Baud) Provide Support for CRT Terminals, Optional Letter-Quality Printer, Modem, and Other Serial Devices.**
- **One Synchronous Serial RS-232C Port (Up to 19.2K Baud) and Selectable Protocols, such as BISYNC, DDCMP, SDLC, and HDLC.**
- **PROM Programmer Port to Interface to the Optional Fairchild PROM Programmer Unit.**
- **Parallel Printer Port (Centronics-Compatible Interface).**
- **Programmable Real-Time Clock.**
- **Four CRT Terminals.**
- **Multi-User Version of IMDOS, System Processors, and System Utility Programs (see "System Software").**
- **BASIC Language Interpreter with Interface to Custom F9445 Assembly Language Programs.**
- **FS-I Diagnostic Programs.**
- **Provides Full Support for the F9445 and for the PEP 45 Microcomputer System.**
- **EMUTRAC Can Easily Be Added to the Multi-User System.**

Entry-Level System

System features include:

- **A 16-Bit CPU with 128K-Byte RAM and F9445 Instruction Set.**
- **Two Double-Density Floppy Disk Drives Provide Approximately 1M-Byte of Mass Storage.**
- **I/O Controller Board Provides Floppy Disk Controller Interface.**
- **Nine Asynchronous Serial RS-232C Ports (Up to 19.2K Baud) Provide Support for CRT Terminal, Optional Letter-Quality Printer, Modem, and Other Serial Devices.**

™ EMUTRAC is a trademark of Fairchild Camera and Instrument Corp.

© IC MASTER 1983

- One Synchronous Serial RS-232C Port (Up to 19.2K Baud) and Selectable Protocols, such as BISYNC, DDCMP, SDLC, and HDLC.
- PROM Programmer Port to Interface to the Optional Fairchild PROM Programmer Unit.
- Parallel Printer Port (Centronics-Compatible Interface).
- Programmable Real-Time Clock.
- One CRT Terminal.
- Single-User Version of IMDOS, System Processors, and System Utility Programs (see "System Software").
- BASIC Language Interpreter with Interface to Custom F9445 Assembly Language Programs.
- FS-I Diagnostic Programs.
- Full Support for the F9445 and for the PEP 45 Microcomputer System.
- Hardware and Software Factory-Upgradeable to Standard or Multi-User System.
- EMUTRAC and MMPU Can Be Added to System.

System Hardware

The hardware comprising the FS-I development system is housed in a single enclosure that contains the mainframe CPU, I/O board, optional boards, and disk drives.

The mainframe consists of:

- Single-Board 16-Bit CPU with 128K Bytes of RAM, 4K-Byte PEPBUG45 PROMs for Bootstrapping the System, Real-Time Clock, an RS-232C-Compatible Port, and a Centronics-Parallel Compatible Port.
- Power Supplies.
- I/O Controller Board with the Following:
  - Eight Asynchronous Serial RS-232C Ports, with Four Ports Having Full Modem Control and All Ports Having Data Rate Selectable Up to 19.2K Baud, that Allow Timesharing by Up to Eight Concurrent Users on Systems Equipped with MMPU Board and Multi-User Operating System Software.
  - One Synchronous Serial RS-232C Port (Up to 19.2K Baud) and Selectable Protocols, such as BISYNC, DDCMP, SDLC, and HDLC.
  - A Parallel Data Channel Interface Compatible with Shugart Associates System Interface for Communicating with Disk Units.
  - 8-Bit Parallel Port to Interface with Optional Fairchild PROM Programmer.
- A Total of Nine Asynchronous Serial Ports (RS-232C-Compatible, DB25-Pin Female Connectors).
- One Parallel Printer Port (Centronics-Compatible Interface, DB25-Pin Connector).
- Expansion Slots for Fairchild's Optional I/O Controller Boards, Optional EMUTRAC Controller Board, Memory Expansion Boards, MMPU Board, and Industry-Standard, Nova® I/O-Compatible Interface Boards.
- Depending Upon System Configuration, the Mainframe Contains a Single 10M-Byte Winchester and a Single 0.5M-Byte Double-Density Floppy Disk Drive or Two 0.5M-Byte Double-Density Floppy Disk Drives.

The MMPU board expands the physical address space of the FS-I to 4M words by performing logical-to-physical address translation. This board is required for multi-user system software. With its 384K bytes of RAM, the MMPU board extends the FS-I memory to 256K words.

Hardware Options

The FS-I systems support the following Fairchild-supplied hardware options:

- Additional I/O Controller Boards that Provide Asynchronous RS-232C Ports (Up to 19.2K Baud) in Sets of Eight, a Synchronous RS-232C Port for each I/O Controller Board, Data Channel Interface to Disk Units, and a PROM Programmer Port for each I/O Controller Board.
- Fairchild's PROM Programmer Unit.
- MMPU Board that Provides Memory Mapping and Protection Expansion in Increments of 384K Bytes, Optional Multi-User Software Allows the MMPU Board to Support Eight Simultaneous Users.
- Memory Expansion Board that Provides 384K Bytes of Additional RAM (Requires an MMPU Board in the Chassis).
- EMUTRAC System Controller Board that Provides the Hardware Interface Between the CPU Board in the FS-I and Processor-Specific EMUTRAC Modules.
- EMUTRAC Modules and EMUTRAC Control Software that Support the F3870, the F6800, the F6809, and the F9445 Microprocessors.
- Additional CRT Terminals.
- Dot Matrix Printer—Texas Instruments Model 810 Basic RO Terminal (150 CPS), Centronics Parallel Interface, and Cable.
- Daisywheel Letter-Quality Printer—Qume Model Sprint 9145 with Bidirectional Forms Tractor (45 CPS), Serial Interface, and Cable.

® Nova is a registered trademark of Data General Corp.

System Software

The interactive multi-user disk operating system (IMDOS) is the principal operating system for the FS-I. In addition to being an operating system, the IMDOS includes the following features that are useful for developing F9445-based systems:

IMDOS	Single-User Supervisor—The supervisor manages the FS-I resources and controls the I/O. Multi-User Supervisor—The supervisor manages the FS-I resources for up to eight simultaneous users, controls the I/O, and interfaces transparently to the MMPU board (included only with the multi-user system). Executive—The executive provides the command language interface between the user and the supervisor.
EDIT	The EDIT program provides the ability to create and modify text files.
MACRO	The MACRO program is the macroassembler for F9445 macro assembly language.
RELOAD	The RELOAD program is used to link relocatable macro assembly language programs to create executable F9445 absolute assembly language programs.
PEPBUG-45	The PEPBUG-45 program is a virtual console and debugging tool for F9445 absolute assembly language programs. The PEPBUG-45 program is also available in PROM.
PEPLINK	Provides capability to download programs from the FS-I to PROM or RAM on the PEP38, PEP45, and PEP68 microcomputer systems.
Utility Library	Implements the utility functions listed in the IMDOS and utility library users guides.
PHONE	The PHONE program establishes communication between the FS-I and a modem or telephone line. Software switches govern communication protocols.
SCRIPT	The SCRIPT program processes a text file that contains SCRIPT commands to produce an aesthetically pleasing document.
TYPESET	The TYPESET program processes a text file that contains TYPESET commands to produce an aesthetically pleasing document.
TESTS	A series of programs that test the FS-I hardware. The diagnostic programs are available on diskette in a version suitable for downloading to an F9445-based system.
BASIC	Language interpreter with interface to custom F9445 assembly language programs.

This powerful software package, which is included with the standard, multi-user, and entry-level systems, offers advanced capabilities that the user would normally expect from a much larger system, such as:

- **Multi-User Timesharing**
- **System Executive, Including File Management System with Version Numbers for Automatic Backup**
- **Memory Management and Protection by Memory Mapping**
- **Password Protection**
- **Interactive Command Language and Command Files**
- **Multiple Directory Devices**
- **Device-Independent I/O**
- **Hard Disk, Magnetic Tape, Modem, and Real-Time Clock Support**
- **Documentation Aids**
- **Concurrent Processing and Spooling**

© IC MASTER 1983

Software Options

F9445 MICROFORTRAN	An extended subset of FORTRAN66 that interfaces with custom F9445 assembly language subroutines. MICROFORTRAN produces "ROMable" F9445 code and can be operated under the real-time executive (REX).
F9445 PASCAL	A Jensen and Wirth-compatible PASCAL. The F9445 PASCAL compiler generates F9445 code and interfaces with custom F9445 assembly language subroutines.
FS-I/PEP 38 System Software	Includes F8/F3870 cross assembler and program for downloading to the PEP 38 system.
FS-I/PEP 68 System Software	Includes F6800 cross assembler, F6809 cross assembler, F6800-to-F6809 translator program, and program for downloading to the PEP 68 system.
F16000 Cross Software	Assembler, debugger, and downloader allow the FS-I to generate 16000 code that can be downloaded to an F16000-based system.
F9445 REX	A real-time executive for F9445-based systems. The REX system allows creation of custom REX programs, linkable using RELOAD.
F9445 PEPBASIC	A diskette version of PEPBASIC (supplied on PROM with the PEP 45 system). A 2K-word subset of BASIC, which accepts abbreviations, that is extendable with custom F9445 assembly language subroutines.
EMUTRAC Control Software	Optional EMUTRAC control software packages provide support for each processor-specific EMUTRAC module.

In addition, all Fairchild software for the FS-I is independently available without system purchase under an appropriate software license agreement.

Dimensions and Power Requirements

The FS-I standard mainframe enclosure measures only 26 inches long by 19 inches wide by 13 inches high. It requires a 115 V, 60 Hz ac power source. A 50 Hz system is also available.

FAIRCHILD
A Schlumberger Company

PEP-45
Prototyping, Evaluation and Programming Board

Microprocessor Product

Description

The Fairchild PEP-45 is a single-board microcomputer for Prototyping, Evaluation, and Programming of microprocessor-based system applications using the F9445 microprocessor. When used with the Fairchild System-I (FS-I) development system, the PEP-45 board provides capability for executing and debugging software directly on the F9445 microprocessor.

- **Stand-alone Prototyping, Evaluation, and Programming Board.**
- **Provides a Powerful Development Tool to Support F9445 Microprocessor-based System Development.**
- **Utilizes All the Advantages of the F9445 Microprocessor, with Its Powerful Instruction Set and High Throughput.**
- **Memory Options for Bipolar and NMOS Memories.**
- **Interfaces with IEEE 796 Standard Bus.**
- **Buffered F9445 bus.**
- **On-board EPROM Programmer.**
- **Adapts to 16K or 32K Byte EPROMs or 64K Byte Masked ROMs.**
- **Standard- and High-Speed RAM Options.**
- **Console Commands.**
- **Two Serial I/O Ports.**
- **16-Bit Parallel Input/Output.**
- **Four Interrupt Sources.**
- **Five Status Lines.**
- **On-board +12 V and +25 V Voltage Converter.**
- **Requires Single +5 V Power Supply.**

The PEP-45 board is primarily intended for use in hardware prototyping and software development applications. It may also be tied to a host computer, such as the FS-I, for large program editing, assembling/compiling, and general file storage and handling. Cross-assembler software packages are available for creating machine-executable programs in formatted form. These programs may be down-loaded from the host computer system into the PEP-45 board via one of the two serial I/O channels. Since the PEP-45 board can operate in a transparent fashion, it may be placed in-line between the user's in-house terminal and the host computer, giving the PEP-45 the power of the host.

Also useful for incoming inspector of F9445 parts and as a microcomputer training tool, the PEP-45 interacts with the user at the control terminal, with prompts that assist programming. The control terminal may be a video terminal, printer terminal, or from a microcomputer control console.

Software Support

In addition to serving as an efficient stand-alone evaluation module, the PEP-45 is designed to operate as a key module of the FS-I development system. A PEPLINK utility transparently couples the FS-I video terminal to the PEP-45 board.

A powerful PROM-based PEPBUG debugging monitor provides commands for trouble-shooting assembly language programs and for developing and testing peripheral circuits and custom interfaces. A PROM-based PEPBASIC language allows programming in a high-level language.

Hardware Specifications

Microprocessor	
CPU	F9445
Data word size	16 bits
Instruction word size	16 bits
Address capability	128K bytes
Console controller	F9470
Memory	
RAM	8K bytes (4K words) static RAM (or optional high-speed RAM)
ROM	Eight sockets for 16K bytes of F2716 EPROMs (8K words), or up to 32K bytes using F2732 EPROMs (16K words), or masked 64K byte ROMs using F3564
Expansion	External memory in any combination of RAM or ROM up to 64K bytes maximum (in 16-bit-wide only)
Input/Output	
Parallel I/O	Two TTL-compatible, 16-bit I/O ports (one input, one output)
Serial I/O	Two programmable, asynchronous channels, with RS-232 interfaces. Each channel is software-selectable to a baud rate of 110, 300, 1200, 1800, 2400, or 4800 baud
Real-Time Clock	Continuously selectable real-time clock interrupts from approximately 200 μs to 200 ms

© IC MASTER 1983

System Buses

Dual backplane buses	PI — An 86-pin asynchronous system bus compatible with standard Multibus 16-bit slave boards and multi-master option
	P2 — A 60-pin buffered F9445 bus that allows complete expansion of processor capabilities and faster operating speeds
I/O buses	J1 — A 9-pin RS-232C serial I/O interface for control terminal
	J2 — A 9-pin RS-232C second serial I/O interface for a serial printer or a host computer
	P3 — A 40-pin applications connector with two parallel I/O ports (one input and one output), and with status and control bits. May be used for connection to the microcomputer control console or to a high-speed parallel printer (Centronics-type)
Connectors	P1 — An 86-contact, double-sided edge connector on 0.156″ centers
	P2 — A 60-contact, double-sided edge connector on 0.100″ centers
	J1, J2 — 9-pin, D-type subminiature right-angle connectors
	P3 — A 40-pin, double-sided edge connector on 0.100" centers.

Power Supply Requirements[1]	+5 V ±5% at 3.5 A (typ)
Environmental Requirements	
Temperature	0°C to +50°C
Humidity	0% to 90% (noncondensing)
Physical Envelope Dimensions[2]	
Height	10.0 (254)
Length	12.0 (305)
Thickness	0.75 (19.05)
Weight	17 oz. (approximately)

Notes
1. Power may be applied to the board either through the card-edge backplane connector or by connection of discrete wires to the board.
2. All dimensions are in inches and millimeters (in parentheses).

Fairchild cannot assume responsibility for use of any circuitry described other than circuitry embodied in a Fairchild product.

Fairchild reserves the right to make changes in the circuitry or specifications at any time without notice.

PEP 68 System Single-Board Microcomputer Development System

Microprocessor Product

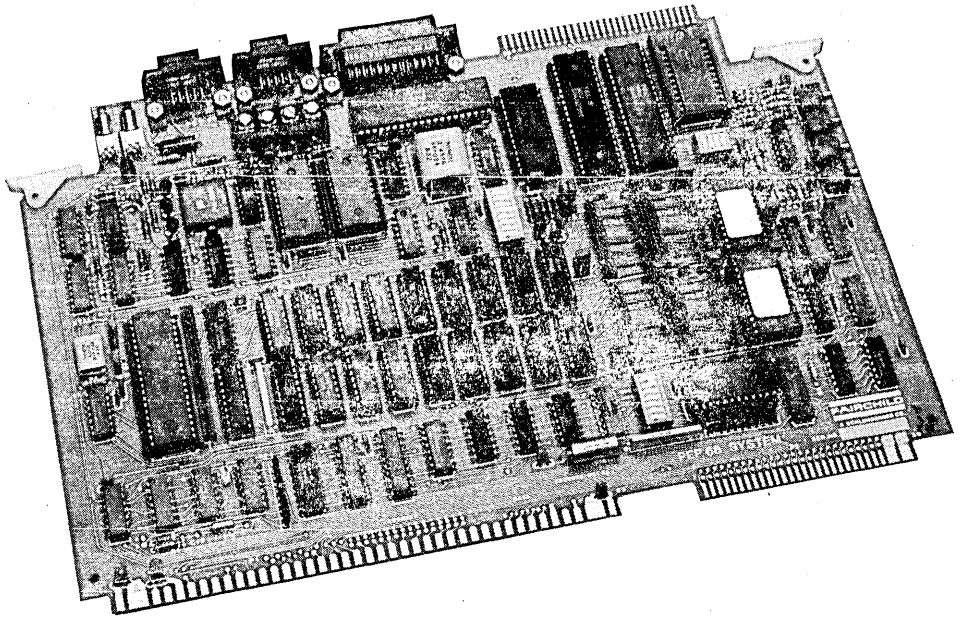
Description

The PEP 68 System is a single-board microcomputer specifically designed to aid microprocessor hardware/software designers in designing, prototyping, and debugging their 6802-, 6808-, or 6809-based system. A powerful, ROM-based debugging monitor provides commands for trouble-shooting machine-language programs. Other monitor commands provide for easy development and testing of peripheral circuits and custom interfaces. The monitor includes a full complement of utility routines to make the hardware/software/firmware design cycles as easy as possible.

The PEP 68 System is useful as a microcomputer training tool. Its friendly interaction with the user at the control terminal, through its liberal use of prompting, makes procedures easy to learn for the beginner. The system can be operated using only a serial display terminal and a power supply.

Since the system possesses two separate bus connectors, expansion with external memory or peripheral boards is simply a matter of providing a backplane connection. Thus, the PEP 68 System can act as a *bus master* in a multicard system.

- Single-Board, Stand-Alone System
- Processor Options—6802, 6808, or 6809
- Asynchronous Multibus* Compatible
- Auxiliary Synchronous 680X Bus
- Programming Socket for 2716 or 2732 EPROMs
- 8K-Byte System Monitor in ROM
- 9K Bytes of Static RAM—8K User, 1K System (Write-Protectable Segments)
- Six Sockets for User-Supplied ROM/EPROM (2K, 4K, or 8K Types)
- Sixteen Possible Memory Map Configurations (Switch-Selectable)
- Two High-Speed Audio Cassette Tape Interfaces
- Two Independent Serial I/O Channels—RS-232-C
- Independent Baud Rate Selection—50 Through 19.2K bps
- Connector for Parallel Printer (Centronics Type)
- Six 8-Bit Parallel I/O Ports Plus Controls
- Three Programmable 16-Bit Binary Timers
- +5 Volt-Only Operation



*Multibus is a trademark of Intel Corporation.

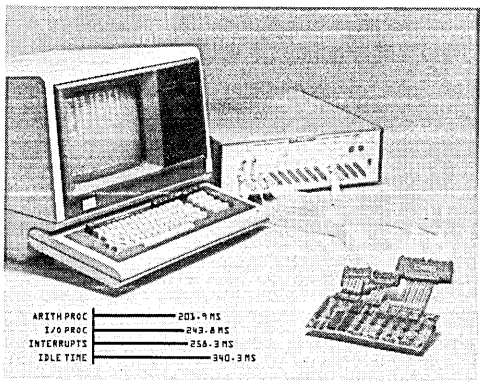
MICROPROGRAMMING?
. . . THAT'S THE HILEVEL LANGUAGE!



HILEVEL builds two powerful development systems for your work. Both are configurable for all of today's hardware implementations, PROM-BASED or RAM-BASED.

Microcode development is demanding work. Wide words, high speeds, and complex micro-instructions make test and debug a challenge. So, designers must have the best tools for development.

Because firmware fine-tuners need excellent visibility of target activity, HILEVEL introduced the 80-bit 4K deep real-time TRACE. Now, with 16-level conditional triggering and 8 independent patterns per level, plus selective snapshot, visibility at full clock rate gets even better.

Virtual In-Circuit Emulation lets you see registers, flags. . .the total status of all your processor chips, instantly. Whatever your architecture.

The newest HILEVEL development system for microcode is the multi-station DS570 shown. It has all features of the downloaded DS270, expands many, and adds assembly in 440K and a 10 megabyte hard disk, supporting the UNIX* multi-user operating system.

The DS570's performance-analysis histogram feature allows you to define 16 tasks, then run tests to measure the efficiency of your design.

Affordable at any configuration level, the DS570 grows to 4 DS270-like emulation stations (rear of photo) plus 8 UNIX* terminals, menus, Help, PASCAL, e, and FORTRAN. HILEVEL's columns in the Master Selection Guide show more features.

*UNIX is a trademark of Bell Laboratories.

Speeding the development of microprogrammed processors from SSI/MSI to bit-slice to gate arrays, the HILEVEL EMULYZERS™ contain:

MACRO-ASSEMBLER
- 8 to 256 bit microword
- 160K to 440K user space

WRITABLE CONTROL STORE
- 16 to 256 bits
- 1K to 65K words
- 20 ns to 120 ns
- Multiple arrays

TARGET CONTROL
Halt ■ Run ■ Clear
Goto ■ Force ■ Jam

LOGIC STATE ANALYZER
Unlimited Breakpoints ■ Selective Trace
Change While Run ■ Data-Pattern Breaks

iPDS™
PERSONAL DEVELOPMENT SYSTEM

- Completely integrated computer system packaged in a compact rugged enclosure for portability
- Comprehensive design tool for 8 bit Intel microprocessors
- Microprocessor Emulator (EMV) functions
- Dual processing capability
- Expandable using standard Multimodule™ cards
- Desk top computer for CP/M* based applications
- 640 K byte Integral flexible disk drive; expandable to 1.28 million bytes
- Powerful ISIS-PDS disk operating system with relocating macro-assembler, and CRT-based editor
- Optional high level languages Fortran 80,PL/M 80, PL/M 88/86 and Basic
- Software compatible with previous Intellec systems
- PROM programming functions
- Bubble Memory option.

The iPDS Development System is a completely integrated computer system supporting the development of products incorporating Intel 8 bit microprocessors or microcontrollers. Used with its optional emulation vehicles (EMVs) and iUP PROM Programming Personality Modules, the iPDS system provides comprehensive support for integrated hardware and software development, product testing during manufacture, and customer support after the product is in the field. The unit is designed with portability in mind permitting the iPDS Development System to be conveniently transported around the laboratory and into the field. Extensive software is available thereby simplifying and speeding up product development. The software is designed to make the iPDS system easy to use for the novice as well as satisfying the needs of the experienced user. Used with the optional CP/M operating system, the iPDS system becomes a desk top computer that can execute CP/M compatible application programs.

iUP-200/iUP-201 UNIVERSAL PROM PROGRAMMERS

MAJOR iUP-200/iUP-201 FEATURES:

- Serial interface to all INTELLEC® - Development Systems
- Powerful PROM Programming Software utility (iPPS)
- Support for all Intel PROM families through multiple device Personality Modules
- iUP system self-tests plus device integrity checks

ADDITIONAL iUP-201 FEATURES:

- 24-character alpha-numeric display
- Full hexadecimal plus 11-function keypads
- Off-line editing and device duplication
- 16K bytes RAM expandable to 32K bytes

The iUP-200 and iUP-201 Universal Prom Programmers provide programming and verification of data in all the Intel programmable ROMs (PROMs). They can also be used for programming the PROM memory portions of Intel's single-chip microcomputer and peripheral devices. When used with any INTELLEC Development System, the iUP-200 and iUP-201 provide on-line programming and verification with the aid of the Intel PROM Programming Software utility (iPPS). In addition, the iUP-201 supports off-line, stand-alone, program editing and PROM duplication. The iUP-200 is completely expandable to the iUP-201.

NETWORK DEVELOPMENT SYSTEM II (NDS-II)

NDS-II is a network of development systems which share public resources provided by a Network Resource Manager (NRM). The NRM and workstations are connected using 10Mbit/s Ethernet* technology. All existing Intel development systems can be upgraded to be NDS-II workstations.

The NRM provides:

- **Central Mass Storage Using Winchester Technology and Existing Model 740 Cartridge Disks**
- **A Spooled Line Printer Interface Shared Among All Workstations**
- **A Protected Hierarchical File System**
- **Job Queues That Allow Network Users to Export Jobs to Available Network Station Resources**
- **Support for All Existing Intellec® Development Systems to be used as Workstations: Intellec® Model 800, Series II and Series III Systems**

The network provides the ideal environment for microcomputer development, hosting software and hardware engineering tools. The tools are designed to efficiently accomplish the following tasks:

- **Program Creation and Compilation**
- **High-Level Language Debugging**
- **Software Version Control**
- **Management of Software Generation**
- **Hardware/Software Integration**
- **Debugging of Software Running in User Designed Systems**

The entire spectrum of Intel microcomputer architectures is supported by a complete range of tools: languages, debuggers, in-circuit emulators, PROM programmers, and system tools.

*Ethernet is a trademark of Xerox Corporation.

iMDX 225
INTELLEC® SERIES II/85
MICROCOMPUTER DEVELOPMENT SYSTEM

- Complete Microcomputer Development System for MCS®-86, MCS®-85, MCS®-80, and MCS®-48 Microprocessor Families
- "Soft Key" Keyboard
- High Performance 8085A-2 CPU, 64K bytes RAM Memory, and 4K bytes ROM Memory
- Command Line Recall, Edit, and Repeat
- Self-test Diagnostic Capability
- Enhanced Operator "Useability"
- Built-in Interfaces for High Speed Paper Tape Reader/Punch, Printer, and Universal PROM Programmer
- Integral 250K byte Floppy Disk Drive with Total Storage Capacity Expandable to Over 2M Bytes of Floppy Disk Storage and 22M Bytes of Hard Disk Storage
- Powerful ISIS-II Disk Operating System with Relocating Macroassembler, Linker, Locater, and CRT-based CREDIT™ Editor
- Supports PL/M, FORTRAN, BASIC, PASCAL and COBOL High Level Languages
- Software Compatible with Previous Intellec® Systems
- Fully Integrated into the NDS-II Network Development System
- iPDS™-FTRANS Option Enables File Transfer Between iPDS™ and Any Intellec® Development System

iMDX 557
iAPX Resident Processor Card Package

- **High-Performance 8086-Based CPU Board for Increased Intellec® Development System Performance and Improved iAPX 86/88 Development Environment**
- **Upgrades Intellec® Series II and Model 800 Microcomputer Development Systems to the Functionality of Series III Systems**
- **224K Bytes of User Program RAM Memory Available for iAPX 86/88 User Programs**
- **Software Applications Debugger for iAPX 86/88 User Programs**
- **Supports Full Range of iAPX 86/88-Resident, High-Level Languages: PL/M-86/88, PASCAL-86/88, and FORTRAN-86/88**
- **Includes iAPX 86/88-Resident Relocating Macro Assembler, Linker, Locator, and Librarian**
- **Dual Processor Disk Operating System Software with 16-bit ALTER™ Editor**
- **Supports PSCOPE™ Advanced 86/88 Software Debugger**

The iMDX 557 is a performance enhancement package for Intellec® Series II and Model 800 Development Systems, specifically designed for iAPX 86/88 microprocessor development. The iMDX 557 includes an iAPX-based CPU board with 256K RAM memory, CRT-based menu-driven editor, iAPX 86/88-Resident Relocating Macro Assembler, Linker, Locator and Librarian, software applications debugger for iAPX 86/88 user programs, and complete user documentation. The DX-557I kit includes an iMDX 557 plus an IPC-85.

PSCOPE
HIGH-LEVEL PROGRAM DEBUGGER

- **Source-Level Debugging for High Productivity**
- **Breakpoint, Single-Step and Execution Trace by Statement Numbers, Procedure Names and Labels**
- **High-Level Code Patching**
- **Operates with Intel's Next Family of In-Circuit Emulators for Target System Debugging**
- **Native CPU Execution for iAPX 88 and 86 Architectures**
- **Supports PL/M, Pascal, and FORTRAN Program Debugging**

PSCOPE is an interactive, symbolic debugger for high-level language programs. It allows users to scrutinize program execution at the source level, using high-level statement numbers, procedure and variable names and labels. This is typically a more productive way of debugging high-level language (HLL) programs than at the machine level.

Source-level debugging means that traditional functions, such as setting breakpoints or tracing execution flow, are more powerful in PSCOPE. For example, tracing procedure entry (or exit) points conveys much more information than tracing machine instructions. Single-step execution is more powerful, using statements and procedures, as well.

The productivity improvement from debugging in a high-level language is analogous to programming in a high-level language, when compared to assembly-level programming and debugging.

PSCOPE users may define high-level code patches, which are "compiled" and patched into the user's program. Code patches may be stored on disk, so they may be later incorporated into the program source file.

PSCOPE is an integral part of the advanced 12 MHz instrumentation product line (next generation of ICE). This allows a smooth migration from *program* debugging to *target system* debugging.

PSCOPE's symbol capacity is virtually unlimited. Symbols are paged to disk when necessary.

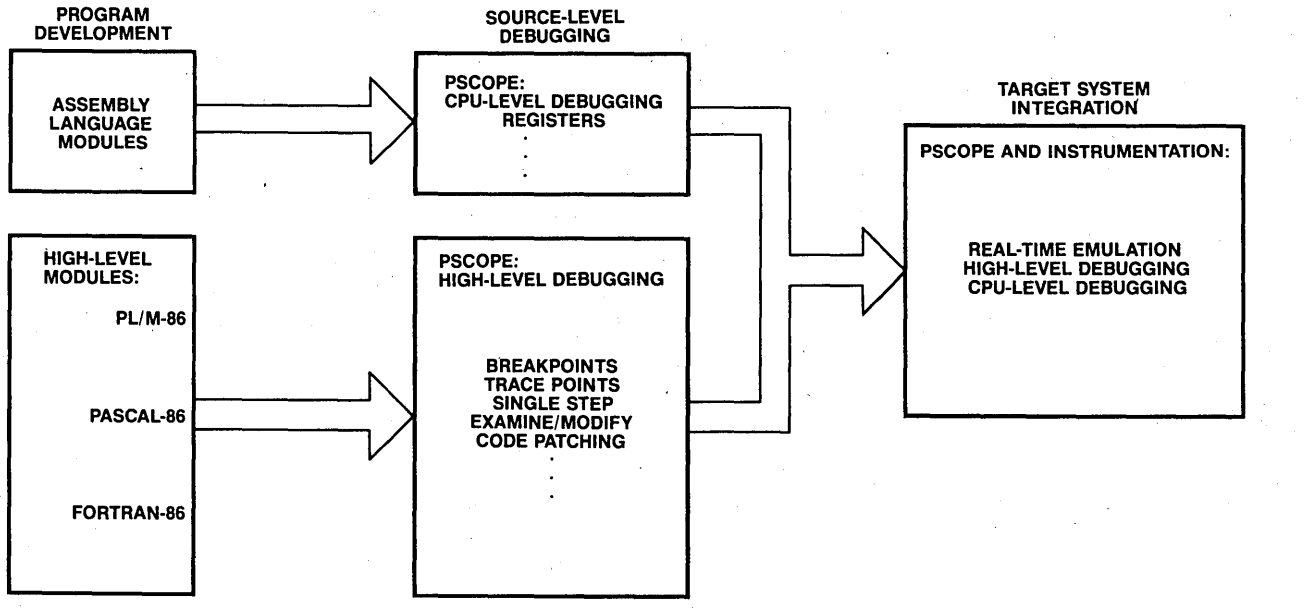

Figure 1. Debugging Methodology with PSCOPE

PROGRAM MANAGEMENT TOOLS

- **Increases Time Available for Software Engineering**
- **Decreases the Overhead of Software Administration**
- **PMT's Let Users Control, Automate, and Examine the Evolution of a Software Project**
- **SVCS Maximizes Control of Program Changes and Versions of all Software Modules**
- **MAKE Saves Time by Automatically Generating New Releases of a Software System**
- **Enhances the Capability of Networked (NDS-II) and Standalone Development Systems**
- **Fits Easily Into Current Software Development Methodology, Using Existing Tools and Conventions.**

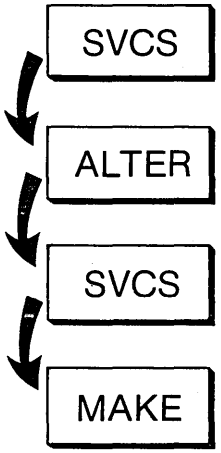
Intel's Program Management Tools provide the essential ingredient to manage large software development projects. By decreasing the time spent on tracking program changes and manually generating a new system, Intel PMT's give engineers more time for software design, development, and debugging.

This package consists of a "Software Version Control System" (SVCS), and an automated software generation facility (MAKE). These tools work together to control, examine, and automate the management of a software system containing many versions of hundreds of modules.

SVCS lets users track changes to source modules, showing who made a particular change, what changed, when it was made, and why. It also allows different versions and "flavors" of a module to be uniquely identified. This simplifies managing an application that is "customized" for different end users.

MAKE is used for generating new releases of a software system, using the latest versions of the various modules in the system. Only the modules that have been changed need to be recompiled and relinked; MAKE determines exactly what operations are to be performed, saving generation time.

Incorporating the PMT's into an existing project is easy. They work with the existing operating systems and software tools (editors, compilers, utilities), requiring very little relearning. The program management tools are ideal in a networked (NDS-II) environment, where multi-man software control is critical. (They fully utilize the protected, hierarchical file system.) The PMT's are extremely useful on standalone systems (with winchester disk) as well.



OPTIMAL CONTROL OF A SOFTWARE PROJECT.

REAL-TIME BUS STATE ANALYZER

The Real-Time Bus State Analyzer (BSA) is a highly intelligent diagnostic tool that is designed specifically for use with microprocessors. It consists of a Control Module plus one of several "Personality Modules." The Control Module contains the analyzer hardware, control firmware, and I/O ports. The Personality Modules interface to selected MPU/MCU, EXORbus, or VERSAbus signals. The BSA stores data which appears on between 55 and 79 different lines.

In order to facilitate the gathering of pertinent data from the MPU/MCU or bus, a set of qualified triggering modes are provided. These modes can be broken into three categories: Continuous Trace Mode, Sequential Trigger Mode, and Window Trigger Mode.

CONTINUOUS TRACE MODE samples signals and stores signal information continuously on each occurrence of the clocking signal. It is primarily a default mode which the BSA automatically enters when power is first applied. There are no qualifications for the BSA to begin gathering information, so it will always be storing the signal states. This default mode is particularly useful when a sudden catastrophic failure occurs during a debugging session, before the user is able to configure the BSA. It is very likely that the events leading up to the failure will be stored in the BSA's trace store buffer.

SEQUENTIAL TRIGGER MODE requires that a series of events occur before the instrument triggers and starts to gather data; or conversely triggers and stops gathering data. Sequence Terms, as these events are called, must occur in order of specification, or triggering will not take place. A Sequence Reset Term can also be specified to reset the BSA and cause the instrument to begin looking for the Sequence Terms again. Sequential triggering will be most useful for debugging complex software, including loops, nested subroutines and complex branches.

WINDOW TRIGGER MODE provides a means of causing signal states to be stored if address accesses occur inside or outside of a particular address range. Both the upper and lower bounds of the range are programmable, and the size is variable from a single address to the full range of the memory map. Window triggering is useful for following programs that suddenly and unexpectedly leave the memory area in which they should be operating. It is also applicable for observing access violations in a multiple user environment.

SOFTWARE PERFORMANCE HISTOGRAMS are also provided to give an indication of the relative frequency of memory accesses within a particular memory range, with the exact range specified by the user. This histogram provides a means of determining where a program spends the greatest amount of time. The resulting information can then be used to compress inefficient code. A hardware performance histogram is provided to display the relative frequency of combinations of four user-selected signals within a user system.

In order to service these triggering modes and provide a complete set of operating features, an MC6809 microprocessor is located on the Control Module with local intelligence running from an operating system based in ROM. This operating system provides the data analysis and formatting functions for the operator including the interface to the hardware sampling the bus.

To reduce system redundancy, the terminal used by the operator to communicate with the development system will also serve to link him to the intelligence aboard the analyzer (it is a requirement of the CRT-based analyzer operating system that the terminal used be an EXORterm 155 Display Console). This communication will be achieved by means of a phantom or transparent serial link feeding from the terminal through the Bus State Analyzer control board and then to the normal terminal input channel of the development system. The logic onboard the BSA determines whether the information traveling over the link is destined for the development system, the Bus State Analyzer or the terminal. This allows the operating system or the user's software to run in the development system while analysis is being performed. Additionally, a means is provided for the BSA to operate in a stand-alone mode with only a terminal connected.

Part Number	Description
M68BSAC	BSA Control Module for use with BSA Personality Modules
M68BSA1-1	BSA Personality Module for MC68000 and MC68451
M68BSA2	BSA Personality Module for MC6800, MC6809, and MC6829
M68BSA4	BSA Personality Module for MC6801 and MC68120
M68BSA5	BSA Personality Module for VERSAbus
M68BSA6	BSA Personality Module for EXORbus

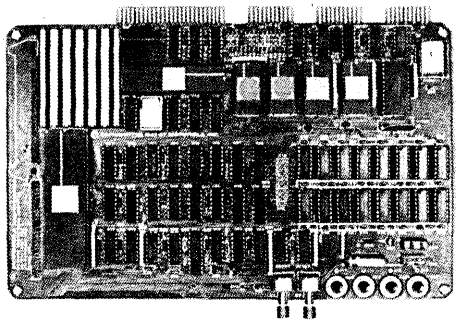
LOW COST MPU/MCU EVALUATION MODULES



A series of inexpensive evaluation modules are available for Motorola's line of microprocessors and microcomputers. Evaluation modules allow the user to prepare, debug, and run software in the resident microcomputer. Even though the cost is low, an onboard ROM contains extensive commands for controlling I/O and debug operations, including down-up load S-record transfers.

Memory, internal registers, and I/O registers may be displayed and modified. Program execution may be traced one step at a time or breakpoints may be inserted for program interruption. Circuitry and firmware are included to allow the MCU's EPROM to be programmed.

MC68000 Educational Computer Board MEX68KECB

The MC68000 Educational Computer Board (ECB) serves as an economical introduction to systems based on the M68000 family of microcomputer products.

The ECB is based around a 4 MHz MC68000 MPU. Also provided are 32K bytes of RAM, arranged as 16K x 16. The firmware is contained in two 8K by 8 ROMs, addressed as an 8K by 16 block of memory. Two RS-232C serial ports are implemented with MC6850 ACIA's and an MC14411 baud rate generator, allowing selection of data rates from 110 to 9600 baud.

One of the M68000 peripherals, the MC68230 Parallel Interface and Timer (PI/T), provides a Centronix-type parallel printer interface and an audio cassette interface. An audio cassette recorder may be used to store and retrieve user programs.

The ECB uses a terminal, interfaced via one RS-232C port. Also, a small wirewrap area is provided for system I/O modification and buffering.

MC6801 Evaluation Module MEX6801EVM

The MC6801 Microcomputer Evaluation Module is a completely self-contained microcomputer on a single printed circuit card, providing the user with the means of evaluating the MC6801 microcomputer. As configured, the MC6801 may be evaluated in the Single-Chip mode by attaching an RS-232C-compatible terminal to the serial port of the module. Thus, the minimum functioning system consists of only the MC6801 and an MC1488 and MC1489 (RS-232C interface).

In the Expanded mode, the customer may add an ACIA, PTM, 4K bytes RAM or 2K EPROM and a programmable gate array for address configuration.

MC68701 Programming Module MEX6801EV1

This module has the same features as the MC6801 module but is also populated with an MC68701, 2K bytes of RAM, a programmed gate array, and a DEbug monitor (PRObug) which also provides the programming capability for the MC68701 EPROM device. It, also, can be used to evaluate the MC6801 microcomputer.

MC68120 Evaluation Module M68120EVM

The M68120 Evaluation Module is designed to assist the potential user of an MC68120 Intelligent Peripheral Controller (IPC) chip in developing software, performing limited circuit emulation, and operating as a serially-linked design on an EXORbus compatible board format.

All data communications are accomplished via two RS-232C ports. Consequently, the Evaluation module can be operated in a stand-alone configuration with only power brought in on the EXORbus connector. An optional operating configuration allows the M68120 Evaluation Module to be plugged into an EXORciser II or an EXORmacs VERSAbus System via a VERSAbus Adapter Module (VAM). The dual-ported 128-byte RAM can then be mapped into a local map or system map.

There is 4K of RAM populated on the board local bus along with decoding to permit an additional 4K RAM to be implemented in the user wirewrap area. The RAM allows user software development and debug for future programming of 2K, 4K, and 8K EPROMs to be inserted on the M68120 Evaluation Module. The Module has 64K bytes of address space on the local bus and 256 bytes of address space on the system bus.

MC68705 Evaluation Module M68705EVM
MC1468705 Evaluation Module M1468705EVM

Operation of an MC68705 or MC1468705 is simulated by the resident MC6805 or MC146805 MCU. Data transfer within the EVM is controlled by the monitor ROM firmware. In turn, this ROM is controlled from an external RS-232C compatible user terminal. User object code may be down-loaded to the user program RAM via the host port; a cassette port is also provided for this purpose. The host and terminal port ACIAs are baud rate strap-selectable from 110 bps to 19.2 Kbps in eight steps.

The MCU parallel I/O ports allow the user to connect externally to the simulated MCU I/O lines. These lines are also used to control the MC68705 or MC1468705 MCUs on-chip EPROM programmer. This is accomplished by inserting the MCU into the programmer socket and executing the appropriate monitor commands.

HDS-200 MICROCOMPUTER HARDWARE/SOFTWARE DEVELOPMENT SYSTEM

Design Features

- Real-time emulation for M6804/M6805/M146805 MCUs.
- Sixteen programmed breakpoints.
- Prioritized breakpoints.
- Line-by-line assembler/disassembler.
- Program trace commands.
- Commands displayed for operator HELP.
- Memory map display.
- Macro commands stored for re-use.
- Transparent mode for best communication.

Operating Features

- Compatible with EXORmacs, EXORciser and EXORset software development systems.
- Low cost.
- Stand alone operation — frees software development system for parallel use.
- Easy to use.

The HDS-200 Hardware Development System, in conjunction with a Motorola EXORset, EXORmacs or EXORciser software development system, provides a complete hardware/software development system for the Motorola M6804/M6805/M146805 families of microprocessors. It consists of a Control Station, with all the functional circuitry to complete MCU emulation, and a separate Emulator Module with an internal microcomputer and memory capacity to match that of the particular MCU it is expected to emulate.

Two major factors contribute to the HDS-200's usefulness as a systems development tool. The first is the ability to serve as a fully functional substitute for the selected MCU in the target system. By plugging the HDS-200 into the socket on the prototype hardware, it allows efficient testing of hardware as well as software debugging. The second factor is its powerful list of analysis commands. These easy-to-use, plain language commands enable the user to rapidly debug, integrate the target system and produce prototype systems.

Systems Development and Integration

The initial stages of developing an MCU-based system normally involve two parallel, rather independent, efforts. One is the hardware design — the other the software design. These efforts are frequently accomplished by two different teams of personnel, resulting in debugging problems that are often difficult and time-consuming. The HDS-200 simplifies this process because of its ability to bring the hardware and software development processes into intimate relationship with each other throughout the development cycle. Moreover, with the HDS-200 it becomes economically feasible to test alternate design approaches in order to determine the best solution.

The complete HDS-200 Hardware/Software Development System consists of three separate items — the HDS-200 Control Station, the Emulator Module, and an associated Firmware Cartridge.

HDS-200 Control Station

The station contains an internal power supply, logic circuits, clock and an MC6809 MPU. The MPU runs the monitor, controls the ports and interfaces with the emulators. It has two RS-232C communication ports for interconnecting with a host computer and a suitable terminal. Another cable connects the station to an associated outboard Emulator Module.

The Emulator Module

The module's output to the user's system is by a short, noisefree ribbon cable terminating in a plug to mate with the target hardware MCU socket. The emulator contains the target processor and various I/O interfaces to provide a compatible link between the Control Station and target hardware MCU/MPU socket.

Different modules are available for specific microprocessor family types. The various MCU Emulator Modules available include the M6804, M6805, M68705, and M146805 families. Each module comes with a matching Firmware Cartridge and an emulator cable/connector assembly.

The Firmware Cartridge

Paired with each Emulator Module is a small cartridge which is easily plugged into the HDS-200 station. This cartridge contains the necessary programs on ROM to enable the HDS-200 to adapt to the specific "personality" of the selected MCU type.

HDS-400 MICROPROCESSOR HARDWARE/SOFTWARE DEVELOPMENT SYSTEM

Design Features

- Guaranteed 10 MHz real-time emulation with no wait states for M68000 MPUs
- No user target system restrictions
- Full symbolic debug
- Unrestricted user memory map
- Maps memory to target system or Emulator Module
- One-line assembler/disassembler

Major Benefits

- Reduces development costs
- Shortens product development cycle
- Brings product to market faster
- Versatility protects against obsolescence

The HDS-400 Microprocessor Hardware/Software Development System is used with a host EXORmacs Development System. It allows debugging of hardware and software in equipment using microprocessors within the Motorola M68000 family.

The HDS-400 simplifies the sytem debugging process by bringing the hardware and software development processes into intimate relationship with each other throughout the development cycle. The HDS-400 has the ability to serve as a fully functional substitute for the selected MPU in the user's target system. By plugging the HDS-400 into the socket on the prototype hardware, it allows efficient testing of hardware as well as software debugging. It also has a powerful list of analysis commands. These easy-to-use plain language commands enable the user to rapidly debug, integrate the target system, and produce prototype systems. The user may execute the commands by sequentially depressing function keys which provide a "fill-in-the-blanks" format with particulars such as file name, address, data, etc. A command code is entered and the command syntax is displayed by the system when combinations of two function keys are pressed.

Typical System Configuration

The HDS-400 Hardware/Software Development System includes a four-slot Control Station with a built-in 30 A power supply and an Emulator Module for the specific MPU which will be used in the target system. Emulators are available for the MC68000, MC68008, and MC68010 MPUs.

A 9.6K-bit/s RS-232C serial link connects a terminal to the HDS-400, which is in turn linked to the host EXORmacs through a 56K-bit/s serial interface. The Control Station chassis uses two of its four slots for a Control Board and an MPU Family Board. Two card slots are available to accommodate such options as a Real-Time Bus State Analyzer.

The Family Board has 32K bytes of 100 ns RAM which the designer can map in 4K byte blocks to replace or expand the target system's RAM. The HDS-400 RAM can also be used to replace the target system's ROM, and may be fully protected against inadvertent writing. The MPU's entire memory map, including all vectors and interrupts, is also available.

System Performance

The HDS-400 can perform real-time emulation and analysis of the microprocessor system at clock speeds up to 10 MHz with no wait states. The Hardware/Software Development System places no restrictions on the user's target system, and up to four breakpoints may be entered by the designer to provide control of program flow.

Using the terminal as a command console, the host EXORmacs can be commanded to edit, assemble, or compile the target software, which is then downloaded to the HDS-400 and into either the target system or emulator RAM. Once this has been accomplished, the HDS debugging commands are used to execute, trace, and debug the target system's code. In addition to the assembled object code, a user's symbol table is available from the EXORmacs. This table provides the symbolic names for the physical addresses of memory, variables, and data.

Symbolic Debug and Assembly

The system designer can use symbolic names to refer to data, program, and subprogram labels, and variables. This eliminates conversions between symbols and hex code. A variable can be changed or displayed on the terminal merely by referring to its name rather than a specific address location. When tracing or displaying MPU program code, it is displayed using assembler mnemonics and user symbols for both operands and labels rather than hex code.

Symbolic assembly capability is also provided by the HDS-400. This means that the user may enter MPU assembler mnemonics and the symbolic debugger will automatically convert it to machine code.

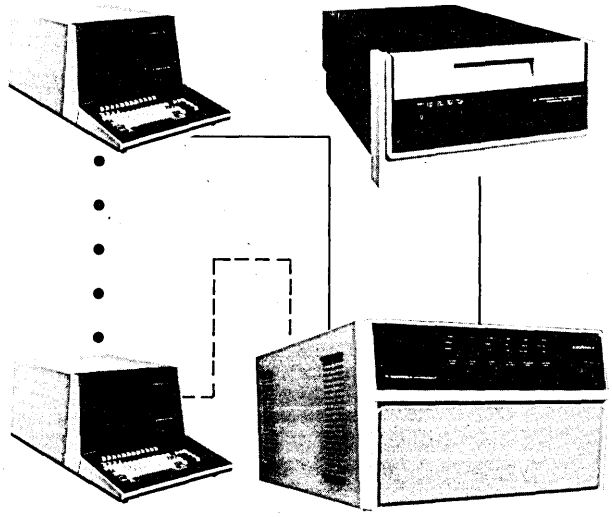
M68000 DEVELOPMENT SYSTEM

EXORmacs



- Complete Development System for MC68000 MPU
- Up to Eight User Stations
- Multi-Processor Bus Arbitration
- Multi-Tasking Real-Time Operating Sytem
- Resident Pascal High-Level Language
- Diagnostic Firmware
- Up to 192 Megabyte Fixed/Removable Hard Disk
- And Up To 2 Megabyte Dual Drive Floppy Disk
- Provisions For Future 32-Bit Microprocessors
- Optional Cross-Development Software for 8-Bit MPUs

EXORmacs is a state-of-the-art development system for designing and developing advanced 16-bit microprocessor based systems using Motorola families of microprocessors, microcomputers, and peripheral parts. It is also ideally suited for developing applications using the VERSAmodule family of 16-bit board level application products and accessories.

Designed for flexibility and ease of use, EXORmacs takes advantage of the power and features of the MC68000 microprocessor unit (MPU). EXORmacs reduces system cost and development time by incorporating features which support 16-bit and future 32-bit microprocessor designs, as well as providing high-level language support through Pascal. With additional terminals and communications modules, up to eight users may simultaneously develop M68000 programs.

System Expansion Modules

Multichannel Communications Module (MCCM) — M68KMCCM
VERSAbus Adapter Module — M68KVAM
VERSAbus RAM 128K Byte — M68KVM10-3
VERSAbus RAM 256K Byte — M68KVM11-1
VERSAbus RAM 512K Byte — M68KVM11-2
VERSAbus Extender — M68KEXTM
VERSAbus Wirewrap — M68KWW

M68000 System Development Software

VERSAdos-E and UNIDOS Operating Systems

VERSAdos-E

The M68000 Real-time Operating System (VERSAdos) provides complete real-time, multitask support for the EXORmacs User. Features included in the VERSAdos are:

- Real-time multitasking executive
- Device independent I/O
- Floppy and hard disk support
- Sequential, random, and index sequential file capabilities.

CRT Text Editor

The EXORmacs CRT-oriented Text Editor runs under the supervision of the Operating System and provides the capability to create and modify source programs. The editor supports both command and cursor editing, utilizing the cursor, control characters and function keys of the EXORterm 155.

Structured Assembler

The M68000 Structured Macro Assembler translates source statements into relocatable machine code, assigns storage locations to instructions and data, performs auxiliary assembler actions designated by the programmer, and optionally produces a cross-reference listing. The M68000 resident assembler includes macro and conditional assembly capabilities plus certain control constructs that permit structured programming at the assembly language level.

Linkage Editor

The Linkage Editor provides the capability of merging two or more separately-compiled object units into a loadable object module file.

Symbolic Debug

The SYMbug/A program is used to debug other programs, whose source code may have been written in Motorola-provided assembler language, for execution on the M68000. The language processors, in cooperation with the Linkage Editor, supply symbolic information to SYMbug/A. This permits the user to describe the debugging requirements to SYMbug in terms close to the language in which the source program was written.

Pascal Compiler (Optional) M68K0PASCALH

Pascal is a block structured high order language that promotes good programming technique, is self-documenting, and simplifies program writing.

FORTRAN Compiler (Optional) M68K0FORTRNH

Motorola's FORTRAN exceeds ANSI FORTRAN 77 subset language specification, providing real-time processing capabilities.

UNIDOS M68K0UDOSH

UNIDOS is Motorola's multiprogramming, timesharing operating system designed to run on the MC68000-based EXORmacs Development System. It is compatible with UNIX* Version 7.

Program Development Tools

UNIDOS offers its users a large selection of features. Some of these are: an assembler, a text editor, a linking loader, and a "C" compiler. A wide variety of operating system functions, program development tools and text processing functions are available in UNIDOS. UNIDOS also supports UNIX version 7 system calls and is compatible at the source level.

UNIDOS program development tools include a symbolic debugger and a disassembler which facilitates program debugging by providing an interactive assembly level window to object code.

Operating Environment

UNIDOS minimum hardware requirements are an EXORmacs Development System with 256K RAM and a 16MB, 32MB or 96MB hard disk system. This combination of hardware will support two users. Up to six users can be supported with the addition of the appropriate communications module.

* UNIX is a trademark of Bell Laboratories

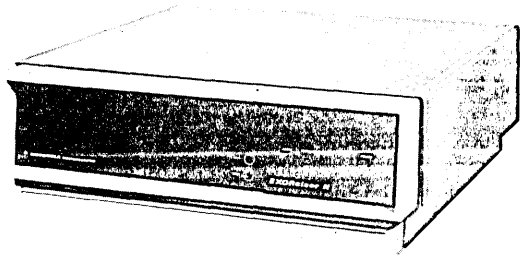
Development Systems

EXORciser For 8-Bit Prototype Development

M6800 EXOR
M6809 EXOR



The EXORciser is an expandable development system that allows development of any 8-bit Motorola microprocessor or microcomputer configuration, from the simplest to the most elaborate. It comes with an MPU Module that provides system timing and a DEbug Module that contains system firmware. Both MC68B00 or MC68B09 MPU versions are offered in the EXORciser Development System.

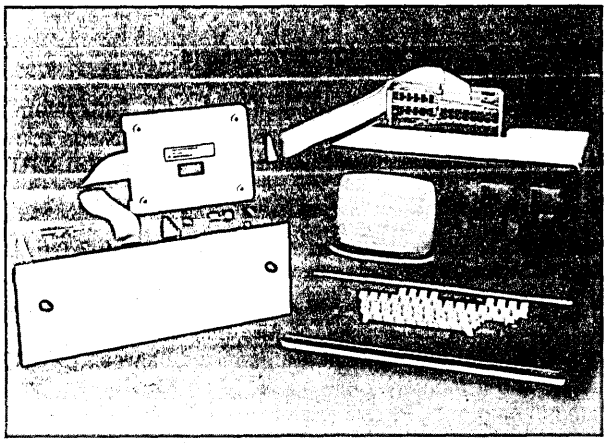
With optional accessories, the EXORciser design and diagnostic functions can be extended to other members of the Motorola family of microprocessors and microcomputers.

The EXORciser with a USE (User System Emulator) option can be used to test and evaluate equipment external to its chassis. By removing the microprocessing unit from the user's system and connecting the USE cable from the EXORciser into the MPU's socket, the EXORciser with its EXbug firmware can be used to debug and troubleshoot microprocessor systems.

The basic EXORciser consists of a rugged cabinet with a built-in power supply, and a prewired bus-oriented 14-slot Backplane with MPU and DEbug Modules. Together these elements form a development microcomputer, with the capability of adapting the unit to a specific design problem by adding optional I/O and memory modules. Additional Motorola memory modules for the EXORciser can be selected to suit varying system configurations; for example, to meet the increased memory requirements of sophisticated high order language based systems. The concept of add-on modules permits the user to match the functional requirements of the systems being developed. Using one slot each for a floppy disk and printer function, ten slots remain for memory and I/O expansion. The EXORciser is a system that is never out-of-date, being at all times upgradable when new and expanded microcomputer functions become available.

EXORset DS35 For Low Cost Hardware/Software Development

M68SETDS351
M6801DS351N



The EXORset DS35 Microcomputer Development System is a compact desk-type computer that is powerful enough to handle major development projects and, at the same time, is simple and economical enough to serve the needs of the first-time microcomputer system designer. It's a direct MC6809 system emulator that can be converted instantly into an MC6805 or MC146805 (CMOS) emulator simply by plugging in the appropriate conversion module through an access opening in the top cabinet. It can be used for both hardware and software design, and when the design is finished, it can often serve as a cost-effective end product of the very system it helped design.

All you need, for most projects, is built right into the handsome 26.7" x 18.5" desktop cabinet. There's a full ASCII keyboard with 16 additional function keys that help speed up program development and applications. A 9-inch high-resolution CRT display is ideal for both alpha-numerics and graphics. Built-in dynamic RAM provides 56K bytes of electronic memory to hold large executable programs and two front-panel-accessible mini-floppy drives make available an additional 328K bytes of memory storage.

The powerful EXORbug monitor controls the keyboard and displays operations and offers complete debugging facilities. The XDOS operating system takes care of all operations and file management. Resident BASICM compiler with Micromodule 19 runtime package, a CRT Editor, Relocatable Macro-Assemblers for M6800, M6801, M6805 and M6809 and a linking loader are included.

An M6809 Pascal compiler is available as an option, part number M6809SETPAS.

© IC MASTER 1983

Resident System Software

8-Bit Assemblers, Editors and Monitors

M6800 and M6809 Development System Software Package

Supplied with the Motorola floppy disk subsystem, EXORdisk, is a basic software development package consisting of the Motorola Disk Operating System (MDOS), CRT Editor, Macro Assembler and Linking Loader.

M6800/01/09 UP/Down Load **M6800UPDWNLD, M6809UPDWNLD**

Permits a user to download software developed in a host system into an EXORciser or Micromodule; alternatively, memory-to-memory uploads are permitted between EXORcisers, and a memory-to-file upload to an EXORmacs; provided in both a 2K PROM and two 1K PROMS.

8-Bit High Level Languages and Cross Assemblers

M6800/M6809 MPL Compiler **M68MPLR020M/ M6809MPL**

A high-level, user-oriented system programming language for the MC6800 and MC6809 MPU's, MPL is a block-structured language with features chosen for applicability to the microprocessor environment. This compiler is designed to operate in an EXORterm or EXORciser floppy disk-based environment with MDOS.

M6800/M6809 FORTRAN **M68FTNR012M/ M6809FORTRN**

Resident FORTRAN is a high-level programming language widely used for scientific and engineering problem solving. This FORTRAN Compiler, which is a subset of the ANSI standard FORTRAN IV, translates the source program into a relocatable object module. The Linking Loader converts the relocatable object code into an executable object file.

M6800 Real-Time FORTRAN Compiler **M68RTFR02M**

This FORTRAN Compiler enables the user to write real-time software in a high-level language for use in M6800-based Micromodule systems. It also contains an execution-time operating system, allowing several queues of tasks to be performed, with an ability to respond to real-time interrupts and to generate delays.

M6800 Resident BASIC Interpreter **M68BASR010M**

The Resident BASIC Interpreter provides another problem-solving tool to the M6800 microcomputer family of products. BASIC is high-level programming language widely-used for education, general-purpose, and certain business-related applications. Decimal arithmetic, string variables and arrays, string functions, and printer output are several of the features.

M6809 BASIC-M Interactive Compiler **M6809BASMR**

The BASIC-M Interactive Compiler provides an extension over standard BASIC in two major directions. It improves considerably the capabilities of the BASIC programming language and generates executable codes that can be used independently of the compiler itself. The compiler is available for M6809-based EXORciser.

M6809 Pascal **M6809PASCLC**

M6809 Pascal produces relocatable object modules that may be linked with other separately compiled Pascal modules and/or assembly language modules. The object code is position independent, re-entrant and ROMable. Both a Compiler which produces a relocatable object module, and an Interpreter version are available for M6809-based EXORciser systems.

EXORciser CRT Editor **M68EDITM**

EDITM is a memory resident record key oriented text editor that can do CRT editing on a line-by-line basis using only the left and right cursor functions and a few easy to remember control key sequences. EDITM can edit up thru a 132 character line, can be run under CHAIN command control, has error recovery procedures, and is USER configurable for different CRTs and default conditions. 6800 and 6809 versions of EDITM are included. 32K RAM minimum.

EXORset/EXORciser Document Processor **M68XDOC/ M68MDOC**

DOC is a powerful text processing program. Any editor may be used to imbed the DOC processor commands with DOC interprets and formats in the output text. Among the many features are: file concatenation (book chapters), multiple file input (form letter/address file), automatic table of contents generation, automatic page numbering, left/right/center text justification, conditional text, and multiple line spacing. 24K RAM minimum.

© IC MASTER 1983

Accessories for System Diagnosis and Manufacturing

The EXORciser EXORset and their basic options are very versatile development instruments. Through emulation of a user system, they take the guesswork out of hardware and software design. And with these additional modular options, they become highly sophisticated post-design centers.

MEX68SA2 (6800)

System Analyzer — M6809SA (6809)

This unique instrument can be used to enhance the capabilities of the EXORciser as a design tool, or as an independent, portable, low-cost unit for field service of bus-compatible equipment.

In field service applications, the System Analyzer derives operating power and I/O signals directly from the system under test. It can stop the system at any point in its program, step through the program, change the contents of the system memory, and monitor and record the MPU's operation during a selected portion of the program without shutting down the operation.

In EXORciser applications, it complements the system's inherent program development capabilities. In conjunction with the EXORciser and USE, it offers the most powerful combination of development and diagnostic tools available for microcomputer work.

PROM Programmer — M68PP3

This module plugs into the EXORciser or EXORset and is compatible with firmware and disk operating systems. The PROM Programmer is designed to program a variety of MOS PROMs, EPROMS and bipolar PROMs. It can verify data from the PROM, transfer data from the PROM to the development system RAM memory, and transfer blocks of data from one memory location to another. Programming time depends upon the PROM used.

In order to accommodate Motorola's 32K and 64K byte EPROMs, an optional package is offered for the PROM Programmer. It consists of an adapter board, and is available as a separate option for those needing this additional capability (M68PP3-1).

Software on diskette for both M6800 and M6809-based systems is included with the PROM Programmer.

EXORciser/EXORset Conversion Systems

Through hardware and corresponding software options, the EXORciser or EXORset can be transformed into a dedicated design and evaluation tool for microprocessors such as the MC6801, MC6802 and MC6805.

MC6801 Development System — MEX6801

This product upgrades EXORciser and EXORset for development of MC6801-based systems. All three modes of MC6801 operation — single-chip, expanded multiplexed and expanded non-multiplexed — are supported by this system.

This system is fully compatible with all current supporting hardware and software and includes the USE function. It allows real-time emulation of the MC6801 application hardware and facilitates the debugging of software.

MC6805 Family Development System — MEX6805, MEX6805R2

These products adapt EXORcisers and EXORsets to the development of systems based on the MC6805P2 and MC6805R2/U2 microcomputers. Included in the support system are the printed circuit board module, extended cables for USE for both HMOS MC6805 versions, and an diskette containing the M6805 Cross Macro Assembler and FIVEbug (the system debug/monitor program).

A two-processor philosophy is utilized, in which an MC6805 microcomputer on the module operates in concert with an MC6800 or MC6809 microprocessing unit in the host.

M146805E2, F2, G2 Development System M146805E2EM, M146805F2EM, M146805G2EM, M6805FIM

These 8-bit CMOS system provide an EXORset or EXORciser with the capability to debug MC146805E2, F2, or G2 applications in the actual hardware and software configuration of the user's final system.

It emulates all M146805 inputs and examines all the corresponding outputs via software control, or controls the inputs and outputs via external user hardware. Thus, this development system offers an economical and expedient means for developing new applications prior to committing the programs to the final production masks.

The 6805 Family Interface Module resides in the EXORset or EXORciser card cage and provides the EXORbus interface to the MCU emulator module via two cables that are included.

Each emulator includes a User System Evaluation (USE) cable 6805 Macro Assembler and MCU debug software on XDOS mini-diskette and 6800/6809 MDOS diskettes.

Microcomputer Analyzer — M68UCANA1

This analyzer is an advanced, portable test instrument for use in locating faults in M6800-based systems. An M6800 In-Circuit Emulator with 40-pin connector, Signature Analysis Probe and Time Domain Analysis Probe is included with this analyzer. The Signature and Time Domain analysis features permit fault location at the component, module and system level. The compact size and relatively low cost of the Microcomputer Analyzer make it an ideal tool for field maintenance, production testing and depot repair.

© IC MASTER 1983

Peripherals

Use of appropriate peripheral devices can generate savings by affording faster program development. Each Motorola peripheral is supplied with the necessary circuitry to perform the necessary development system interface function.

EXORterm 155 — M68SXD10155

EXORterm 155 is a video terminal which facilitates the exchange of data between the user and the development system via a high quality video interface in combination with keyboard entry and a serial communications link using speeds up to 9600 baud.

EXORterm 155 uses LSI components of the M6800 family to provide control of the display attributes, communication facility, terminal switch/indicator control, and keyboard inputs. The keyboard provides cursor control keys and special keys to invoke functions unique to the EXORciser and EXORmacs Operating Systems. These keys can also be used by the designer for special routines. An additional Text Edit mode feature permits multiuser editing.

EXORterm 155 may be connected for either RS-232C or 20/60 mA current loop operation. Like the EXORterm Development System, this display console contains a high-quality CRT with a full 1920-character screen and 7 x 9 ASCII characters.

The EXORdisk — M68DSK2, M68DSK3, M68KFD1102

The EXORdisk is a dual floppy disk storage system with its own package of development software. EXORdisk is designed to support either MDOS (the EXORciser Disk Operating System) or VERSAdos (the EXORmacs Disk Operating System). It facilitates high-speed data transfers through fast headsettling time and logical sector arrangement. An interface card connects this storage system to the EXORmacs, EXORciser or EXORterm Development Systems.

EXORdisk is available in various storage capacities. EXORdisk II offers 512K bytes of storage. It is a single-sided/single-density dual drive system with up to 256K bytes of memory per diskette. EXORdisk III is a double-sided/single-density dual drive system with total storage of 1 million bytes. An expansion unit is available for EXORdisk III which adds one additional disk drive and interconnecting cable to increase storage to 2 million bytes.

Hard Disk — M68KHDS16-1, M68KHDS32-1, M68KHDS96-1

The longer, more complex programs written for advanced 16-bit processors like the MC68000 make much higher data transfer speed and larger storage capacity a necessity. New Hard Disk systems offer the EXORmacs user a choice of high speed mass storage.

For multiuser operation in the EXORmacs system, Hard Disk is required to provide rapid storage and retrieval for a large number of files. Hard Disk storage greatly enhances and increases file access performance over a floppy disk-based system.

Dot-Matrix Printers — M68SP702C10, MPRINT703

Motorola dot-matrix printers are equipped with an interface module and/or an interconnection cable assembly that specifically adapts them to the various Motorola microcomputer development systems, including the EXORmacs, EXORciser, EXORterm and EXORset. In addition these interface accessories permit the printers to be used with Motorola Micromodules to provide more complete availability of microcomputer system components. Printer specifications are as follows:

FUNCTION	703	702
Print Speed (cps)	180	120
Lines-per-Minute (80 characters)	90	65
Bidirectional Printing	Yes	Yes
Dot-Matrix	7 x 7	7 x 7
ASCII Character Set	96	64
Tractor Feed	Yes	Yes
Condensed Print (10–16.5 cpi)	—	—

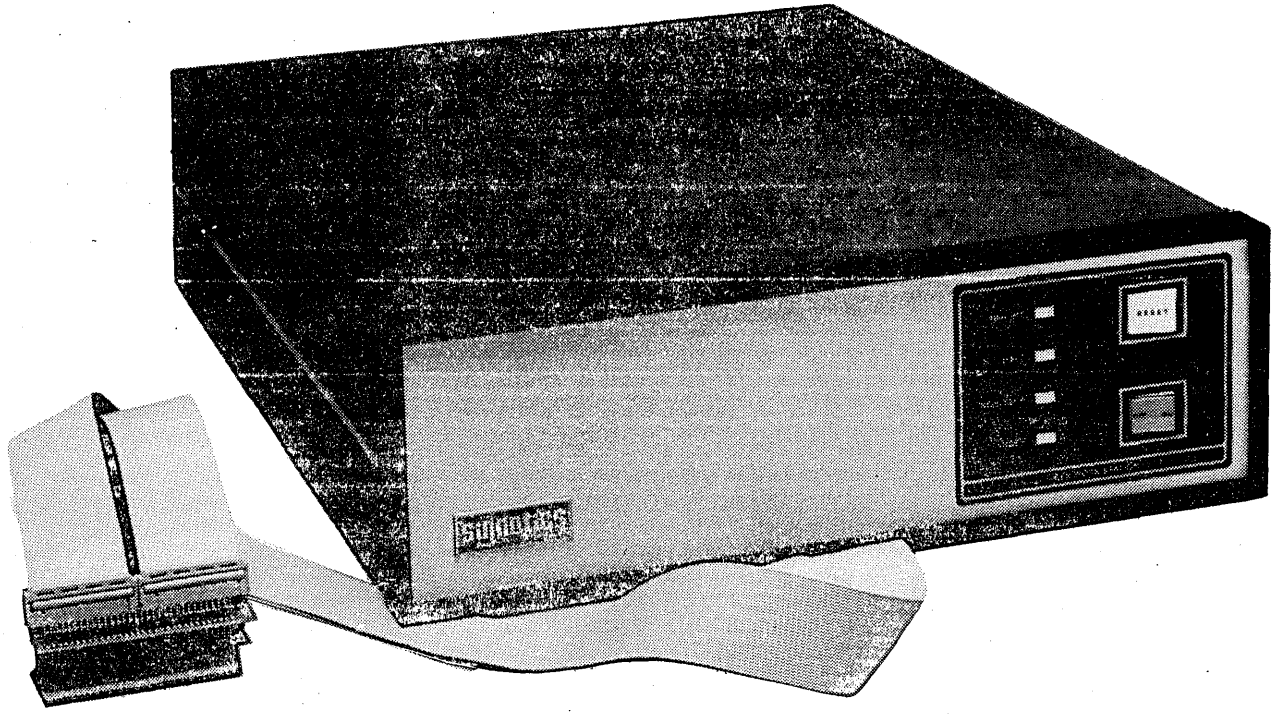
Signetics

SMDEV10000
S68000 USER WORK STATION (UWS)

PRODUCT BRIEF
PRELIMINARY



FEATURES

- **Permits existing support equipment to be utilized**
- **8MHz Hardware in-circuit emulation via Signetics Footprint**
- **Includes ROM resident debugger and confidence tests**
- **8MHz SCN68000 microprocessor**
- **64Kb of the total RAM complement mappable to the system under development**
- **4 serial communications ports as well as serial and Centronics parallel printer interfaces**
- **Designed to function with Signetics cross software products**

DESCRIPTION

The Signetics User Work Station (UWS) is a low cost, but powerful, tool designed to work with Signetics language translators in a cross development environment. The UWS provides the capabilities required to execute and debug software for the SCN68000 microprocessor. Software is first entered via the host computer text editor and then assembled or compiled utilizing Signetics cross development software tools. The generated object code is downloaded to the UWS via a serial communications link. The engineer proceeds to test and debug the software using the UWS ROM resident debugger to set execution breakpoints, examine and modify registers, and make changes to the software utilizing the resident line oriented assembler/disassembler. The debugging process may be accomplished entirely within the UWS or the available UWS memory may be mapped into the system under development. The connection to the system under development is accomplished with the emulation cable and Footprint™ probe which makes all pins of the SCN68000 available for connection of oscilloscope and logic analyzer probes in addition to providing full 8MHz hardware emulation of the SCN68000.

™Footprint is a trademark of Signetics Corporation.

© IC MASTER 1983

SMDEV10000 S68000 USER WORK STATION (UWS)

PERIPHERAL SUPPORT

The UWS firmware supports a variety of peripheral devices that are normally required in the development process. The primary peripheral device supported by the UWS is the console terminal. It can be of nearly any type but must transmit serial data in the speed range of 110 to 19,200 bits per second and have an interface which conforms to the RS-232 interface definition. The UWS supports a serial printer interface and a Centronics parallel printer interface. These hard copy devices may be used to maintain a permanent record of trace data, breakpoint lists, PROM contents, and other information that the UWS firmware can provide. A serial port connection is provided for a PROM programmer interface. The firmware contains drivers for the DATA I/O Model 19 and Kontron PROM programmers. In addition, commands are present to allow reading, writing, and verifying of PROMs. The host computer interface is designed to be compatible with standard modems or short distance line drivers that support the RS-232 interface. The UWS firmware supports transparent terminal to host operation, downloading of object code from the host to the UWS and uploading of debugged or partially debugged object code from the UWS to the host.

CONFIDENCE TESTS

A set of ROM resident confidence tests are included in the UWS. These tests are intended to provide a set of known operations on the serial and the parallel interfaces that the UWS may be commanded to execute to aid in the installation of the unit. In addition, a test of the RAM memory is executed each time the UWS power is turned on. If any errors are encountered in RAM memory, the "Power Fail" LED on the front panel will remain lit and the UWS will halt. The execution of the confidence tests is controlled by switch settings in the UWS and is not dependent on a functioning console terminal or other peripheral devices.

ASSEMBLER/DISASSEMBLER

One of the most useful features of the Signetics UWS is a resident line oriented assembler and disassembler. This feature facilitates the debugging process by permitting the engineer to translate existing Hex values of the machine code into readable mnemonics, or to create and insert new SCN68000 instructions into the routine being tested. The assemble (AS) command causes the UWS debugger to enter a line assembler mode at a user specified address. the engineer may begin entering SCN68000 assembler instructions from the keyboard. The instructions will be assembled and stored at consecutive address locations until a null line or a control Z is entered. Each instruction is verified as it is stored in memory. As each line is entered, both the relative and absolute addresses of the generated code, as well as the resultant machine code, is displayed on the CRT. The disassemble (DI) command allows the UWS to accept a range of addresses where code is to be disassembled. As a result of this operation, the engineer will be able to display the relative and absolute instruction address, a Hex translation of the machine code, the instruction mnemonic, and the instruction operands within the specified range.

The following is an example of the assemble command:

```
MA 1
>AS 10000

SMDEV10000 S68000 USER WORK STATION (UWS)

COMMAND SUMMARY

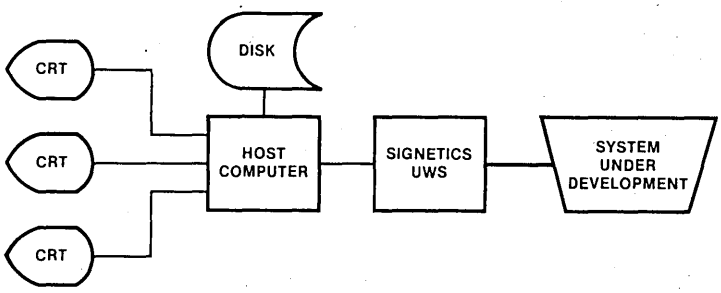
Abort	Manual Breakpoint
Assemble	Map
Auto Dtack	Mode
Clock	Patch Memory
Configure	Patch Registers
Delete Breakpoint	Read PROM
Delete Offset	Record
Delete Trace	Set Breakpoint
Disassemble	Set Offset
Display Memory	Set Trace
Display Registers	Single Step Mode
Download	Single Step
Go	Start Output
Host	Stop Output
List Breakpoint	Trigger
List History	Upload
List Offset	Verify PROM
List Trace	Write PROM

FEATURES

- The UWS is designed to allow software development to occur on mainframes or minicomputers
- The UWS has incorporated the most desirable features of more expensive emulation systems
- The UWS provides the capability for both hardware emulation and software execution
- Both the serial and parallel ports may be reconfigured to match available peripherals
- The UWS upload/download utility accepts object records in Motorola S-record format
- The UWS permits object code to be either downloaded or uploaded
- The UWS can use an internal or external clock
- Up to 10 concurrent breakpoints are supported

BENEFITS

- Hardware which already exists in the work environment can continue to be used and shared for software development
- Provides a low cost solution for 68000 code development
- Reduces development and debugging time and increases user productivity



- Does not restrict the user to one specific peripheral device
- Uses an established 68000 format
- The results of a debug session can be stored and retrieved at a later time
- Offers increased timing flexibility and permits debugging to occur with or without a target system
- Gives a user greater control of the debugging environment

OPERATING ENVIRONMENT

User Supplied Required Hardware

One asynchronous CRT terminal with EIA RS-232 interface.

One modem or suitable substitute that provides an EIA RS-232 interface for asynchronous communication with the host computer.

User Supplied Optional Hardware

One Data I/O Model 19 PROM programmer or Kontron PROM programmer.

One asynchronous serial printer with RS-232 interface.

One Centronics parallel interface printer.

Required Software

One or more Signetics language translators.

Host resident upload/download software (included with Signetics language translators).

Equipment Supplied

UWS with power cord
User Manual
CRT Cable
Test/PROM Programmer Cable
Centronics Parallel Printer Cable
Emulation Cable
Footprint™ probe
Coaxial Clock Cable

Physical Characteristics

Height:	5.22 inches
Width:	16.88 inches
Depth:	22 inches
Weight:	21 pounds
Shipping weight:	31 pounds

Electrical Requirements

117 Volts AC ± 10%, 60Hz ± 15%

Environmental Characteristics

Operating temperature range: 0° to 40°C

Operating humidity range: 0 to 95% relative humidity with no condensation.

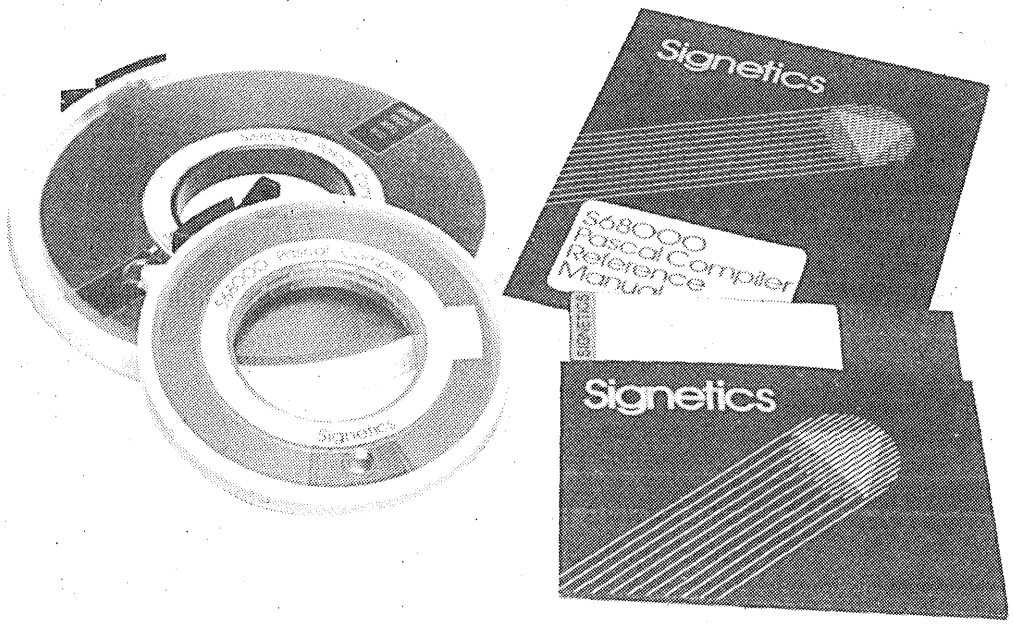
OCTOBER 1982

SMSFT16000
S68000 CROSS SOFTWARE
PASCAL CROSS COMPILER
PRODUCT BRIEF

Preliminary



FEATURES

- **High level structured programming language**
- **Structured data types**
  - **— Array, string, record, boolean, character**
  - **— User-defined data types**
- **Modular programming extensions**
- **Assembly language program interface**
- **Complies with IEEE 770-81 standard**
- **Generates 68000 native code**
- **PROM-able run-time code**
- **Full listing format control**
- **Flexible compiler option control**
- **Cross linkage editor and upload/download software included**

DESCRIPTION

The Signetics 68000 Pascal Cross Compiler is a powerful, flexible, high level programming language. It complies with the IEEE 770-81 standard which is based on the Pascal language developed by Niklaus Wirth in 1968. The compiler provides a highly structured environment that simplifies program development, produces more reliable code, and increases the productivity of the software engineer. Programming errors are minimized by complete checking of data types within modules including user defined data types.

The Signetics 68000 Pascal Cross Compiler is designed to be extremely modular with an emphasis on portability. The compiler, itself, is a result of utilizing truly state-of-the-art compiler design techniques to produce a superior language translator.

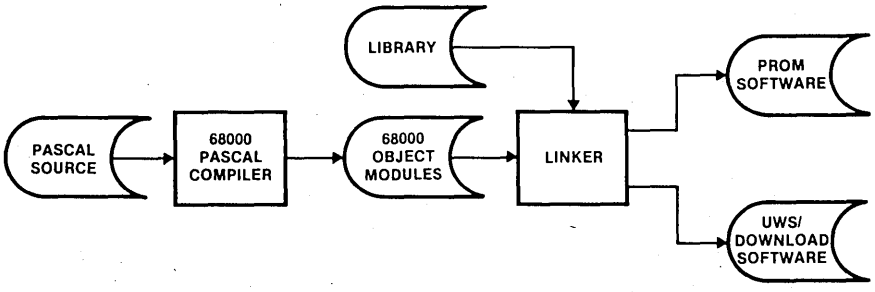
The Pascal Cross Compiler allows the mass storage and development tools available on minicomputers and mainframes to be used in the creation of microprocessor software. It is not necessary to purchase expensive, special purpose computers that are typically used only for microprocessor software development. The upload/download software provides a convenient path for object code to be sent from the host computer to the Signetics User Work Station (UWS) and for partially or completely debugged object code to be saved on the disk of the host computer. All object code is sent utilizing a protocol that includes error detection and control facilities to insure the validity of the transmitted data.

© IC MASTER 1983

SMSFT16000 S68000 CROSS SOFTWARE PASCAL CROSS COMPILER

BENEFITS

- Signetics Pascal provides a standardized environment for developing software for the 68000.
- It allows individuals familiar with Pascal to be immediately productive.
- It is easy to learn since the IEEE 770-81 standard it adheres to is based on the Niklaus Wirth software engineering teaching vehicle.
- It has few machine specific extensions to maximize portability.
- It improves productivity by allowing multiple programs and projects to share both source and object code.
- An assembly language interface is provided to allow direct manipulation of hardware and maximize the performance of time critical modules.
- The Pascal compiler can optionally generate assembly language with source code interlisted as comments to minimize the task of performance tuning in real time systems.
- A full range of listing controls is provided to enhance maintainability of the source code.
- The compiler generated code is optimized in constant and sub-expression usage, array indexing, jumps, and storage allocation for maximum use of target system resources.
- An object module linker with library capability is included with the Pascal, which links together Pascal and assembly language modules and allows specification of starting addresses of all modules.



OPERATING ENVIRONMENT

Operating System	Computers	Requirements
VMS	any VAX-11 computer	(a.) 64Kb of real memory per active compiler user (b.) VMS V2.4 or later (c.) 10Mb of disk storage
RSX-11M	any PDP-11 computer; any LSI-11/23 series computer	(a.) RSX-11M operating system V3.2 or later (b.) minimum 128Kb total system memory to support one compiler user; 64Kb for each additional compiler user (c.) 10Mb of disk storage

SMSFT16000 S68000 CROSS SOFTWARE PASCAL CROSS COMPILER

SIGNETICS PASCAL EXTENSIONS

Separate Compilation — Allows modular programming and facilitates sharing of routines by multiple programs and projects.

Assembly Language Interface — Permits mixing Pascal and assembly language routines for maximum performance and ease of direct hardware control.

INCLUDE Facility — Facilitates sharing of source code and declarations of constants and variables by multiple programs and projects.

Compile Time Switches — Provides control of compiler options such as array index checking.

Assembly Code Generation — Simplifies performance tuning of critical program modules.

EXAMPLE

The following Pascal program is an example of the structure of a Pascal program. This program is designed to eliminate all trailing blanks from the end of each line within a file such that the line termination character occurs after the last non-blank character in the line. It illustrates the use of subroutines, typing of variables, and loop structures. The actual implementation of input and output routines is system dependent, but the read and write statements used are those of the IEEE 770-81 standard .

```
program compact (source, destination);

const   BLANK = ' ';
        LINESIZE = 140;

type    linerange = 1..LINESIZE;
        linetype = packed array[linerange] of char;

var     source, destination : text;
        line : linetype;
        length, cur, lastnonblank : linerange:
        c : char;

        procedure getsourceline;

        begin   length := 1;
                line[length] := BLANK;
                while not (eoln (source)) and (length < LINESIZE) do

                begin   read (source, c);
                        line[length] := c;
                        length := length + 1

                end;
                readln (source);
                if length > 1 then length := length - 1

        end;

begin   reset (source);
        rewrite (destination);
        while not eof(source) do
        begin   getsourceline;
                lastnonblank := 1;
                for cur := 1 to length
                do      if line[cur] < > BLANK
                        then lastnonblank := cur;
                for cur := 1 to lastnonblank
                do      write (destination, line[curl]);
                writeln (destination)

end     end.
```

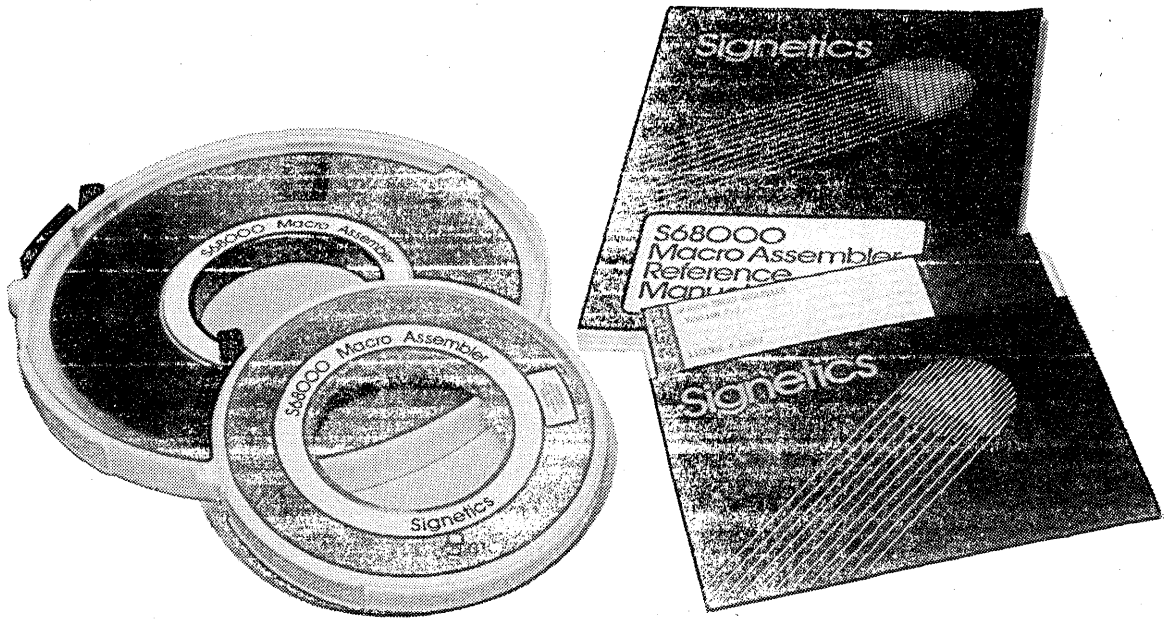
Signetics

SMSFT10000
S68000 CROSS SOFTWARE MACRO ASSEMBLER
PRODUCT BRIEF
Preliminary



FEATURES

- **Powerful, Motorola-compatible assembly language**
- **Interfaces directly to Signetics 68000 Pascal**
- **Unambiguous source language definition**
- **Registers may have symbolic names**
- **Highly flexible constant definition**
- **Both symbolic and mnemonic logical operators are supported**
- **Jump instruction format is optimized automatically**
- **Full complement of assembler directives**
- **"Section" directive allows complete control of code and data placement**
- **Record and Field capabilities for highly structural data definitions**
- **Structured conditional assembly directives**
- **Modular programming support**
- **Source library facility**
- **Powerful macro facility**
- **Linkage editor and download software included**

DESCRIPTION

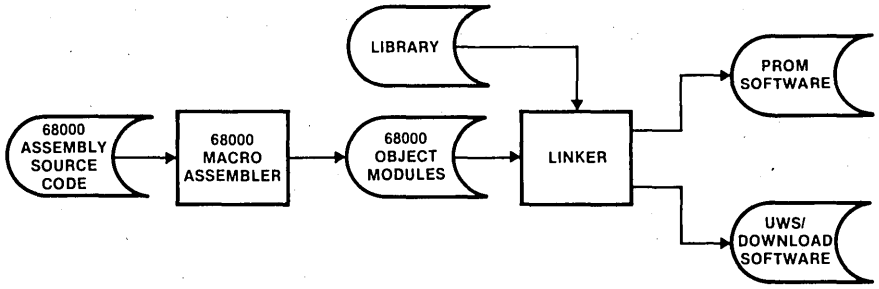
The Signetics 68000 Macro Assembler is a powerful assembler that combines the convenience of Motorola compatible instruction mnemonics with an unambiguous language definition and many useful constructs usually found only in high level languages. The Signetics 68000 Macro Assembler is a perfect complement to high level languages and an excellent implementation language with capabilities such as modular programming support, record and field data definition ability, a source library facility that includes source only when referenced, and assembler directives that minimize the task of parameter passing to subroutines. The Signetics macro facility offers normal macro features such as parameter substitution and nesting but is not a character oriented facility and does not support concatenation of symbols. The linkage editor for linking separately assembled modules is included in the package. This linkage editor may also be used with the object modules generated by the Pascal cross compiler, or to link Pascal and assembler generated modules together. The upload and download software that allows host communication is also included in the package. It is designed to interface with the Signetics User Work Station (UWS) and allows transfer of object code between the host computer and the UWS as well as between the UWS and the host computer.

© IC MASTER 1983

SMSFT10000 S68000 CROSS SOFTWARE MACRO ASSEMBLER

BENEFITS

- The Signetics 68000 Macro Assembler is Motorola instruction compatible, so no extensive retraining is required for software engineers.
- The modular programming support allows sharing of program modules generated by the assembler or by high level languages such as Pascal.
- Sections of source code identified as libraries by the "LIB" and "ENDLIB" assembler will process automatically if they are referenced.
- The conditional and duplicated assembly capabilities allow maximum flexibility in source code structure.



- The use of subroutines is encouraged by the availability of assembler directives that support the definition and manipulation of parameter lists.

OPERATING ENVIRONMENT

Operating System	Computer	Requirements
VMS	any VAX-11 computer	(a.) VMS V2.4 or later
		(b.) 64Kb of real memory per active assembler user
		(c.) 10Mb of disk storage
RSX-11M	any PDP-11 computer; any LSI-11/23 series computer	(a.) RSX-11M V3.2 or later
		(b.) minimum 128Kb total system memory to support one assembler user; 64Kb for each additional assembler user
		(c.) 10Mb of disk storage

Contact Rikki Kirzner for further product information on computers, operating systems, media, or formats not shown.

Synertek.

MDT 2000
Microprocessor Development System

Features

- Supports the Z8 and 6500 Microprocessors
- 2K User RAM for Z8 Internal ROM Emulation
- Intelligent Floppy Disk Controller with two 8" drives
- Three Serial and Two Parallel Interfaces
- Supports up to Two Debug Cards (optional), Providing four Breakpoint Registers
- Optional EPROM Programmer Card with Two Sockets for Programming 2716, 2732, 2532 EPROMS
- PASCAL Disk Based Operating System with Command Prompting
- Powerful CRT Screen-Oriented Editor
- Versatile Disk File Operations with Wildcard Selection
- ROM-based RAM/Disk Diagnostics
- Operator Control of PBOS Boot Operation
- Supports "User Operating System" Disk Booting
- User Configuration of CRT Terminal/Printer Attributes
- PASCAL Access to Serial or Parallel Printer (mutually exclusive)
- Emulation Supervisor (PASCAL-based) Control of Target System
- Universal Assemblers with Macro and Conditional Assembly Directives for Z8 and 6500 Microprocessors
- ROM-based Mini-Debugger
- Supports Double Density 8" Data Disks
- Disk File Hexadecimal Patch Utility
- Optional Assemblers Available for 6800, 6809, Z80, 8080, 9900 and LSI-11
- 220 Volt Option Available

Description

The MDT 2000 Micro Development System provides the user with a flexible, powerful, development and emulation system for Z8 series microprocessors. Debugging is facilitated with in-circuit emulation environment allowing a separate and nonconflicting memory address-space. With an optional debug (Breakpoint) card, the user program may execute in real-time avoiding execution interference from the Emulation Supervisor software. Alternatively, oscilloscope trigger signals can be generated via complex BREAK conditions which do not cuase the user emulation system to halt.

Assembly language source and object program generation is supported with a PASCAL-Based Operating System (PBOS). PBOS provides a powerful screen-oriented editor and floppy disk file manager with user-controlled operations on file name families (i.e., wildcards). User-adaptable CRT terminal and printer configuration utilities are available to tailor the system to various terminal and printer characteristics.

A versatile ROM Bootstrap provides power-up access to RAM and/or disk diagnostics, user-controlled booting of PBOS, and an elementary RAM-oriented debugger for pre-disk boot utilization. Hexadecimal object code may be transferred from a serial RS232C port directly into RAM for disk-independent program loading.

The intelligent floppy disk controller maintains a log of soft (recoverable) disk errors for user request via a PBOS utility. Self-test of ROM and RAM is automatically performed at power-up and system reset time and the results are reported to the host RAM Bootstrap.

TMAM9000 AMPL Development System

Designed for the single user, the TMAM9000 AMPL* System can cut program development time by as much as two-thirds, compared to similar systems. Reason: this tabletop, floppy-disk development lab combines extreme ease of use with extensive, preprogrammed test and debug procedures.

Ease of use stems from the AMPLUS* software which prompts the user as he goes. Included are a screen editor, text formatter, directory/file manager, assembler, linker, and other utilities. Even inexperienced designers will feel comfortable with the TMAM9000 System after only a short time.

AMPL high-level debug tools provide extra capability to analyze hardware or software problems via the full speed emulation and comprehensive logic trace analyzer functions. Emulation and control functions can be called from high-level control sequences written in Pascal-derived constructs, allowing design tests to be automated and repeated with a single command, a capability that facilitates production and field testing.

The TMAM9000 supports a variety of programmable-function devices: the TMS99000 16-bit microprocessors and the TM990 microcomputer modules, the TMS1000 4-bit microcomputers, and the TMS7000 8-bit microcomputers.

TMAM9000 System Specifications

Main Memory (Bytes)	64K
Total Disk Storage (Formatted Bytes)	2.3MB
No. of Disk Drives	2
Type	Double-side, Double-density (DSDD) 8-inch floppy disk (20.32mm)
Capacity Per Diskette	1,152K Bytes
Max. Data Transfer Rate	500K B.P.S.
Terminal Keyboard	88 Key, typewriter style plus numeric, cursor control and function key clusters. N-key rollover
CRT	12-inch (305mm) diagonal
Screen Capacity	80 Character Line—24 lines, 1720 total
Character Set	96 ASCII, upper and lower case
Printer (EIA)-RS232C	Interface included in system
AMPL Station	Interface included in system
Software Package	AMPLUS software system operating system
Features Included	Function key menus, self prompting interactive user interface
Utilities Included	• 9900 Family assembler • 9900 Family linker • Screen editor system • AMPL debug high-level language • AMPL debug procedure library including trace • Disk directory and file utilities • PROM programmer utilities

Multi-AMPL Systems: Highest performance ... lowest cost per user

An entire team can now develop software and hardware simultaneously using a single system. The hard-disk Multi-AMPL Systems from Texas Instruments allow as many as eight program designers to work at the same time. You reduce software investment per user by maintaining a single data base. You cut program development time drastically and achieve the lowest possible cost per user.

Each Multi-AMPL System—there are three configurations from which to meet your particular needs—is a complete set of software and hardware development tools. Providing multiple processor emulation. And concurrent multi-task operation: compile, assemble, debug, edit, printing. Also included: data and address trace. Data and address breakpoints. A high-level debug and test procedure language. EPROM and PROM programming. Microprocessor Pascal, Component Software, and Fortran languages supported.

The modular AMPL Station is the key to system capability and flexibility. Each user can have his own station with access to the computer via video terminals (VDTs). The trace module with 10-MHz capability is the invaluable companion for faster, easier design.

The Multi-AMPL Systems supports a variety of programmable-function devices: the TMS99000 16-bit microprocessors, the microcomputer modules and the TMS7000 8-bit microcomputers.

INTRODUCTION TO MICROCOMPUTER BOARDS

In this section single and multiple board microcomputers are arranged in alphabetic sequence by manufacturer. Under each manufacturer boards are grouped in sequence according to data word size and, within that grouping, according to the microprocessor on which they are based. Hardware and software support are listed for each available board.

A supplementary selection guide is included for microcomputer support boards. The boards are grouped according to supported computer systems.

Detailed Product Information provided by:

Advanced Micro Devices	1901
Creative Micro Systems	1911
Cromemco	1913
Datel-Intersil	1933
Motorola Semiconductor	1935
National Semiconductor	1946
RCA	1956
Signetics	1962
Synertek	1980

The manufacturers listed above have provided detailed information on their latest and most significant products.

EINFÜHRUNG MIKROCOMPUTER-PLATINEN

In deisem Abschnitt finden Sie Einplatinen- und Mehrplatinen-Mikrocomputer in der Reihenfolge ihrer Wortgröße und, innerhalb dieser Gruppierung, in der Reihenfolge der Mikroprozessoren, auf denen sie basieren. Hardware und Software-Unterstützung ist für jede verfügbare Platine aufgelistet.

Neu in diesem Jahr ist ein weiterer Selection Guide für Mikrocomputer-Zusatzplatinen. Die Platinen sind nach den unterstützten Computersystemen geordnet.

INTRODUCTION AUX MICRO-ORDINATEURS SUR CIRCUITS IMPRIMES

Dans cette Section les micro-ordinateurs à circuits imprimés simples ou multiples sont regroupés suivant la taille du "mot de données", et, à l'interieur de chaque groupe, suivant le type de microprocesseur sur lequel, ils sont basés. Les supports hardware et software sont indiqués pour chaque circuit.

Une nouveauté cette année : l'existence d'un Guide de Sélection supplémentaire pour les circuits supports pour micro-ordinateurs. Les circuits sont regroupés d'après les systèmes ordinateurs utilisés.

INTRODUCCIÓN A MICROCOMPUTADORAS DE TABLEROS DE CIRCUITOS IMPRESOS MÚLTIPLES

En esta sección microcomputadoras de tablero individual o múltiple están agrupadas en secuencia de acuerdo al tamaño de palabra para datos y, dentro de ese grupo, por medio del microprocesor en el cual están basados. Apoyo por medio de equipos y programas aparecén para cada tablero de circuitos impresos.

Nueva para este año es la guía de selección suplementaira para suporte de tableros de microcomputadoras. Estos tableros están agrupados de acuerdo al sistema de computadora al que sostienen.

マイクロコンピューターボード への案内

このセクションでは単数，複数ボードコンピューターがデータ，ワードサイズによってグループにまとめられ，そのグループ中ボードコンピューターの基になっているマイクロプロセサ順に記載されています。ハードウエア，ソフトウエア共各ボード毎にのせてあります。本年新たに加わったのはコンピューターサポートボード用の補足セレクションガイドでボードはコンピューターシステム毎にグループになっています。

Software Support					Hard-ware Sup-port	Comments	Model	Source	Line
Assem-bler	Debug/ Monitor	Editor	Lang-uage	Oper-ating System					
					x	10 msec. timer w/ interrupt control. DMA control to external memory. Dynamic RAM refresh clock. Single +5v operation.	7889	Pro-Log	
x	x	x	x		x	Provision for on-board power supply, buffers/terminators on parallel lines, RS232, 422, or loop on serial. Optional CMOS RAM.	CMC69/04A	RCI Data	
					x	Single step control, instruction insertion from DIP switches, and Wire-Wrap development area.	8X300KT100SK	Signetics	
x	x	x		x		Has 28-key keypad and 7-digit display. Tutorial and development tool versions.	Concept-48	Intersil	
x	x	x	x	x	x	Two BLX connectors for modular expansion	BLC-80/116	National	
	x				x	Accessories available for memory expansion, teleprinters, CRT terminal cassette interface.	MMD-1	EL Instr	
x	x	x	x	x	x	Handles hex or octal data entry and display. Includes single-step register examination, breakpoints cassette load/dump, PROM programming.	MMD-2	EL Instr	
			x		x	Expansion capability without backplane.	MCS80-0013	Bedford	
			x		x	Flexible packaging and cabling.	MCS	Bedford	
	x	x	x			Real-time basic training system with RS232 printer/terminal interface. Basic editor/interpreter with utilities and additional 4K of RAM.	AMTS	IntCompSys	10
x	x	x	x	x	x	Sockets for interchangeable line drivers and terminators, programmable communications interface, single-level interrupt.	iSBC80/10B	Intel	
x	x	x	x	x	x	Four interrupts.	BLC-80/07	National	
x	x	x	x	x	x		BLC-80/10	National	
x	x	x	x	x	x	Extended temperature (-40°C to 85°C) version available.	BLC-80/11	National	
x	x	x	x	x	x	Two BLX connectors for modular expansion	BLC-80/11A	National	
x	x	x	x	x	x	Extended temperature (-40°C to 85°C) version available.	BLC-80/12	National	
x	x	x	x	x	x	Two BLX connectors for modular expansion	BLC-80/12A	National	
x	x	x	x	x	x	Extended temperature (-40°C to 85°C) version available.	BLC-80/14	National	
x	x	x	x	x	x	Two BLX connectors for modular expansion	BLC-80/14A	National	
x	x	x	x	x	x		CLB-80/11B	National	20
x	x		x	x	x	RS-232, on-board battery	1806A	Xycom	
x	x		x	x	x	RS-232, on-board battery	1810Z	Xycom	
x	x	x	x	x	x	For severe environmental operation conditions: -55°C to 85°C, 5 G vibration — 5 Hz to 2 kHz, 15 G shock — 11 ms, 0 to 95% humidity.	SECS80/10A	EMM	
x	x	x	x	x	x	Programmable USART, two programmable 16-bit BCD and binary timers. Eight-level priority interrupt logic, Multimaster control.	iSBC80/20-4	Intel	
x	x	x	x	x	x	Sockets for 8041/8741A interface, 12 levels of programmable interrupt control, RAM battery backup, Multimaster control.	iSBC80/30	Intel	
x	x	x			x	Keyboard, tape cassette interface, 8 digit display.	TK-80A	NEC-Micro	
x	x	x	x	x	x	Eight vectored interrupts, 3 on-board timers, multi-processor capability, RAM and ROM can share same address space, battery backup logic.	BLC-80/204	National	
x	x	x	x		x	Two programmable 16-bit BCD and binary timers, eight-level programmable interrupt control, memory protected.	iSBC80/24	Intel	
x	x					Has both 8085 and 8088 processors, only one of which operates at a time. Optional battery-backed calendar clock, math chip.	8108	ETI Micro	
x	x	x	x	x	x	CPU card, 2 or 4 MHz clock is switch-selectable.	1085	Cybersys	30
x	x	x	x	x	x	Includes CRT display controller and ASCII keyboard input port.	MC85	Comark	
x	x	x	x		x	Memory and peripheral I/O cards are available for systems.	ACS/80	Appl Sys	
x	x	x	x		x	Sockets for 4K bytes of EEPROM. Four-level vectored interrupt, sockets for 4K bytes of EEPROM. TTL serial I/O interface. Multimaster control.	iSBC80/04	Intel	
x	x	x	x		x	Programmable 14-bit timer, four-level vectored interrupt, TTL serial I/O interface, Multimaster control.	iSBC80/05	Intel

Software Support									
Assembler	Debug/ Monitor	Editor	Language	Operating System	Hardware Support	Comments	Model	Source	Line
x	x	x	x	x	x	Four vectored interrupts, on-board timer, multiprocessor capability.	BLC-80/05	National	
					x	Accepts low-level signal down to 10 mV.	DT3754	Data Trans	
x	x		x	x		Seven CPU boards in series. DS board has math processor and 12 interrupt inputs.	AMSSeries	Siemens	
					x	For severe environmental operation conditions: -55°C to 85°C, 5 G vibration — 5 Hz to 2 kHz, 15 G shock — 11 ms, 0 to 95% humidity.	SECS80/30	EMM	
					x	Has both 8085 and 8088 processors, only one of which operates at a time. Optional battery-backed calendar clock, math chip.	SECS80/544	EMM	
x	x	x	x	x	x	Four-channel communications computer or intelligent slave for communications expansion. Twelve levels of programmable interrupt control.	iSBC544	Intel	
					x	Accepts high-level analog inputs to ± 10V.	DT3752	Data Trans	
	x					256 bytes of CMOS RAM battery backup. SMP-80 is Eurocard version.	SKC-85	Siemens	
x	x	x	x	x	x		AMS-D11	Western	
	x						SKC-85	Western	10
x	x		x		x	Optional external clock input. Tri-State bus drivers may be disabled for DMA operation. Addressable words expandable to 116K bytes.	7801	Pro-Log	
x	x		x	x		Seven CPU board versions with 8080, 8085, or 8088 CPUs.	SMPSeries	Siemens	
x	x	x	x	x	x		SMP-E6	Western	
x	x	x	x	x	x	Three sockets for distributed digital I/O processing, 12 levels of programmable interrupts, three programmable counters.	iSBC569	Intel	
x	x	x	x	x	x	Three real-time clocks, 28 interrupt sources, optional hardware math package. System is designed for process-control applications.	3885-ZIA	Kinetic Sys	
					x	Milertronics will do programming and interfacing, if desired.	PDC-102	MilerTron	
	x				x	10 msec. timer w/ interrupt control. Control port for memory expansion. RS232C interface for CRT terminal. Selectable DTE/DCE configuration.	7885	Pro-Log	
x	x	x	x	x	x	Software-transparent to Intel SBL90/05, has three SBX connectors, fast-mode selection for CPU clock, needs ± 12V for RS-232.	ZX-80/15	Zendex	
	x	x	x	x	x		BLC-80/24	National	
	x	x	x	x	x		BLC-80/28	National	20
x	x	x	x	x	x	Hardware and software-compatible with Intel Series II IPC-85. Runs all development systems.	ZX-85	Zendex	
x	x		x		x	DMA access to LSI-11 bus. Has external STD bus and minimum of 4 RS423 serial ports with full modem control.	FEP-11L	Nortek	
x	x	x	x	x		See iSBC86/14. ROM/PROM expandable to 64K bytes with iSBC 341 Multimodule.	iSBC88/25	Intel	
x	x	x	x	x	x	Measurement and control computer. On-board A/D converter, 3 iSBX connectors, 3 programmable timers, 4 EPROM sockets.	iSBC88/40	Intel	
x	x	x	x	x	x	Intended as coprocessor for DCS 86/16 or as 8-bit processor for Multibus systems. Three timers.	DCS86/8	Dist Comp	
x	x	x	x	x	x		SMP-E8	Western	
x	x	x	x	x	x	Convertible to ZX-85. Runs CP/M-86.	ZX-88	Zendex	
							IMC100	MCC	
x	x	x	x	x	x	Includes teletypewriter operating system and programmable baud rates.	**F3870-PEP**	**Fairchild (1253.1254)**	
	x				x	On-board decoding for 8 pages of off-board I/O. PROM, RAM, on-board I/O and off-board enables addresses are user definable. Buffered bus.	OB8902	Omnibyte	30
x	x	x	x	x	x	48 individually programmable parallel I/O lines. Available built to MIL883 Standard.	DCS8010A	Dist Comp	
x	x	x	x	x	x	ROM, RAM, on-board I/O and off-board addresses user defineable. Contains 3 16-bit timers and 7 levels of vectored interrupts.	OB68K1	Omnibyte

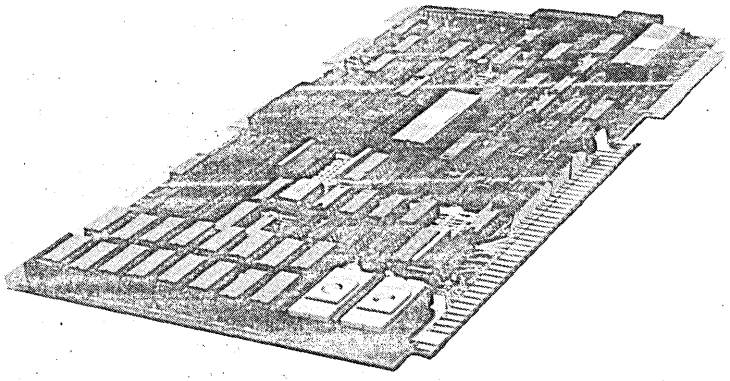
Am96/4116A
AmZ8000 16-Bit
MonoBoard Computer



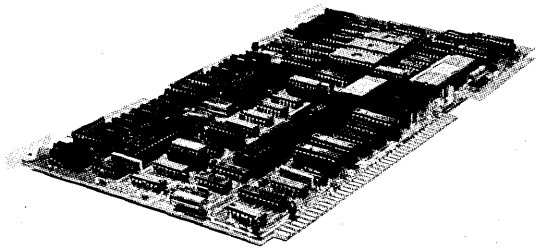
Features

- ☐ One of the Supercomponent™ family of LSI-intensive boards
- ☐ AmZ8002 CPU with 4.0MHz operation: a powerful instruction set; eight addressing modes; a wide variety of data types ranging from bits to long words
- ☐ 32K bytes of dual-ported high-speed memory supporting Advanced Acknowledge (AACK) signal
- ☐ 8K bytes of PROM/ROM space
- ☐ Addresses up to 512K bytes of memory with internal paging arrangement
- ☐ Two RS232 serial I/O ports (Am9551)
- ☐ 24 parallel I/O lines (Am8255A)
- ☐ Five programmable counter/timers (Am9513)
- ☐ Multimode interrupt control (23 sources, 10 lines): vectored interrupts (eight lines); non-maskable interrupts (four OR-ed sources); maskable interrupts (one line, multiple sources)
- ☐ Power-fail capability
- ☐ Compatible with Multibus† standard, SBC-80 card format
- ☐ 100% burned in for enhanced reliability

© IC MASTER 1983

MICROCOMPUTER BOARDS

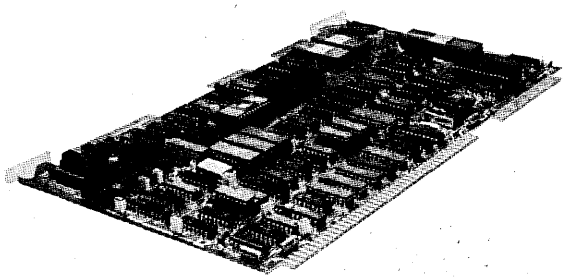
Am95/4006
MonoBoard Computer



Features

- ☐ One of the Supercomponent™ family of LSI-intensive boards
- ☐ Am9080A CPU* – 4MHz
- ☐ Am9511A or Am9512 Arithmetic Processing Unit – high-speed arithmetic computations concurrent with CPU operation (optional)
- ☐ 4K bytes of high-speed static RAM (Am9114)
- ☐ Sockets for up to 16K bytes of ROM/EPROM
- ☐ 8-channel programmable interrupt controller with vectored priority
- ☐ Programmable real-time clock for interrupt-driven systems
- ☐ Am9513 system timing controller
- ☐ 48 programmable I/O lines (two Am8255As) with sockets for line drivers and terminators
- ☐ Serial interface for RS232C interface (Am9551), with program-selectable baud rate (50 to 19,200 baud)
- ☐ Memory shadow: bootstrap program can be selected by power-on or reset and then be program-disabled for RAM space
- ☐ MultiMaster bus control logic allows one to three CPUs to share the system bus
- ☐ Compatible with Multibus† standard, SBC-80 card format
- ☐ Complemented by a family of board products, card cages, and rack-mountable system chassis
- ☐ 100% burned in for enhanced reliability

Am95/4010
MonoBoard Computer



Features

- ☐ One of the Supercomponents™ family of LSI-intensive boards
- ☐ Am8085A CPU @ 4.0MHz operation
- ☐ Extended addressing and memory mapping to 1M byte in 1K byte segments under dynamic program control
- ☐ System/user capability with privileged instructions
- ☐ Programmable read protect and write protect attributes for memory
- ☐ Two serial I/O ports
- ☐ 24 lines of parallel I/O
- ☐ Up to 4K bytes of PROM space
- ☐ Five 16-bit programmable counter/timers
- ☐ Eight-channel programmable interrupt controller
- ☐ Multibus† SBC-80 compatible with MultiMaster bus logic

*Am9080A is a high-speed, pin-compatible version of the 8080A.

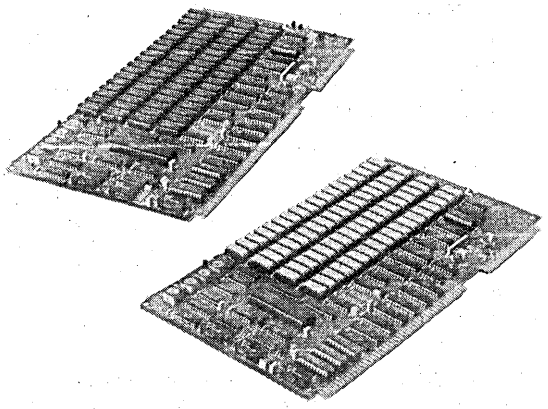
MICROCOMPUTER BOARDS

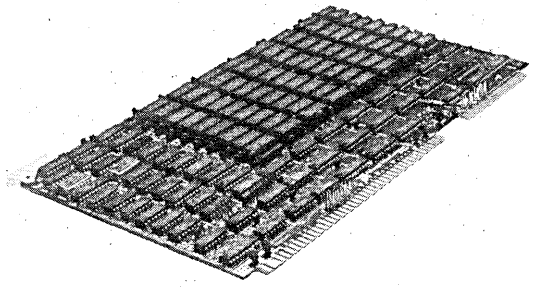
Am97/0064 • Am97/0128
Am97/0256 • Am97/0512
Random-Access Memory Boards



Features

- ☐ Meets proposed IEEE 796 specifications for full Multibus† compatibility
- ☐ Plug compatible with Intel's iSBC* 064A/028A/056A/012B RAM Memory Boards
- ☐ Compatible with Intel's iSBC* and AMD's Supercomponent™ lines of CPU boards or any processor that uses Multibus† interface
- ☐ 8- or 16-bit word size byte-swapping capability
- ☐ Parity with latching error registers and interrupt generation
- ☐ On-board refresh circuitry with optional external refresh control
- ☐ Auxillary connector for back-up power with memory protect control line as provided by Multibus†
- ☐ Supports 16-, 20- and 24-bit addresses
- ☐ Board memory starts on any 4K byte boundary within the 16M byte addressing range
- ☐ Three 16-position switches select 1 of 4096 possible start addresses
- ☐ 200ns max access time for Am97/0064 and Am97/0128; 250ns max access time for Am97/0256 and Am97/0512
- ☐ 350ns and 450ns max R/W cycle times
- ☐ Refreshes every 14 microseconds with a 400ns minimum worst case cycle time
- ☐ Single 5V supply for Am97/0256 and Am97/0512
- ☐ On-board PAL and Am2964B advanced memory controller reduce part count, simplify testing, and enhance reliability
- ☐ 100% burn-in for industrial reliability

Am96/1000A Series
Random-Access Memory Boards



Features

- ☐ One of the Supercomponent™ family of LSI-intensive boards
- ☐ 64K and 128K byte storage options available
- ☐ High-speed operation supports up to 6.0MHz operation with high-performance AmZ8000 CPUs
- ☐ 8-bit/16-bit data bus compatibility for 8- or 16-bit microcomputers
- ☐ On-board transparent refresh
- ☐ Jumper option for advanced acknowledge (AACK) signal to improve response time and throughput
- ☐ Parity in byte mode with interrupt capability
- ☐ Dual bus accesses provide a global RAM link between P1 MultiMaster connector and P2 auxiliary connector
- ☐ Address space in 4K byte boundaries
- ☐ Multibus† and SBC-80 compatible
- ☐ 100% burned in for enhanced reliability

†iSBC is a registered trademark of Intel Corporation.

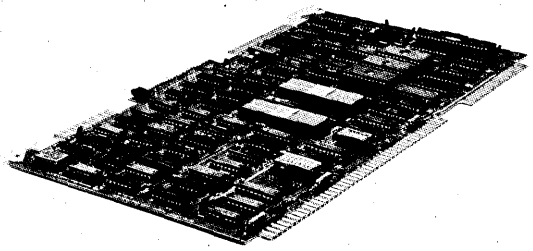
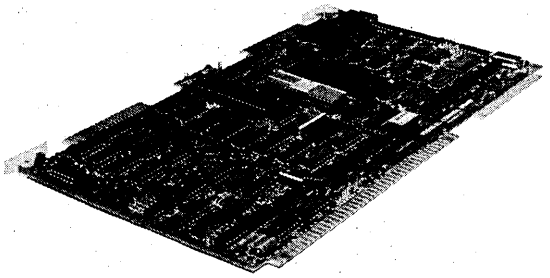
Am95/6120
Intelligent Floppy Disk Controller



Features

- ☐ ONE OF THE SUPERCOMPONENT™ FAMILY of LSI-intensive boards.
- ☐ CONTROLS up to 4M bytes of floppy disk storage.
- ☐ HANDLES FOUR DRIVES. 8-in. or 5¼-in.
- ☐ INTERMIXED single- and dual-density plus single- and double-sided drives managed by one controller.
- ☐ COMPATIBLE with Shugart, Memorex, CDC, Siemens, Remex, Pertec 8-in. drives and Shugart and MPI 5¼-in. drives.
- ☐ DISTRIBUTED I/O PROCESSOR ARCHITECTURE. Performs all disk I/O without host CPU intervention by means of its own microprocessor, control firmware, RAM buffer and LSI peripheral circuits.
- ☐ CONTROL FIRMWARE provides program code for read, write, execute and initialize, plus commands for error checks, status words and operation verification.
- ☐ HIGH THROUGHPUT. Supports maximum disk read/write data rates. Provides high-speed DMA transfers (up to 1.8M bits/sec) in programmable block, burst, or byte mode.
- ☐ 20-BIT ADDRESSING. Handles transfers up in a 1M byte address space.
- ☐ CONFIDENCE CHECK. Automatically provides a diagnostic check on start-up of RAM, ROM, FDC and DMA. Provides status word response to CPU. Visual LED fault indicator.
- ☐ AUTOMATIC SYSTEM BOOT capability on disk.
- ☐ Multibus† SBC-80 COMPATIBLE.

Am95/6110
Intelligent Floppy Disk Controller



Features

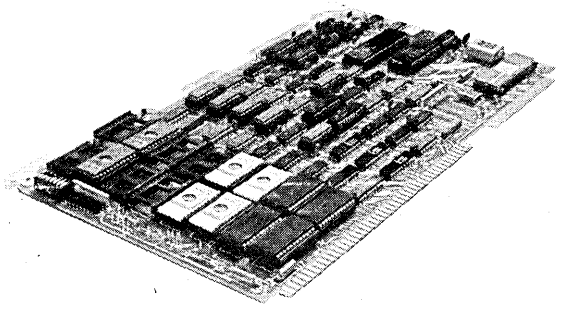
- ☐ ONE OF THE SUPERCOMPONENTS™ family of LSI-intensive boards.
- ☐ CONTROLS FOUR DRIVES, 8-Inch Flexible Disk Drives, Single or Double-Sided, IBM 3740 Soft Sector Media Format, Single Density. Compatible with Shugart, Memorex, CDC, Siemens Drives.
- ☐ DISTRIBUTED I/O PROCESSOR ARCHITECTURE. Performs all Disk I/O without Host CPU Intervention by means of its own Dedicated Processor, Control Firmware and RAM Buffer.
- ☐ CONTROL FIRMWARE. Provides Program Code for READ, WRITE, EXECUTE and INITIALIZE plus several Other Commands for Error Checks and Status Words.
- ☐ HIGH THROUGHPUT by means of On-Board DMA Controller, Programmable for Either Block or Byte Mode Transfers. 20-Bit Addressing Allows Transfers Up to 1M Byte.
- ☐ CONFIDENCE CHECK. Automatically Provides a Diagnostic Check on Start-Up of RAM, ROM, FDC and DMA . . . and Provides Status Word Response to CPU.
- ☐ AUTOMATIC SYSTEM BOOT. Provides a Selectable System Boot Capability with the Booting Routine Residence on Disk and Automatically Read into Memory on Start-up, Initialization or Reset.
- ☐ VERSATILE INTERFACE. SBC/Multibus† Compatible, Single or Multimaster Environment; Operates as an Intelligent Slave; Interfaces to Both 8-Bit and 16-Bit CPU.
- ☐ MULTIBUS SBC-80 COMPATIBLE.

© IC MASTER 1983

Advanced Micro Devices

MICROCOMPUTER BOARDS

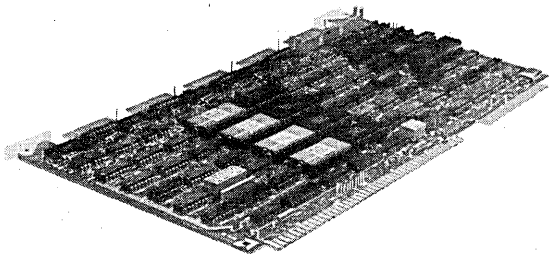
Am95/5132
PROM/ROM/RAM and I/O Board



Features

- ☐ One of the Supercomponent™ family of LSI-intensive boards
- ☐ Sockets for up to 64K bytes of PROM and up to 32K bytes of RAM in a Multibus† compatible board
- ☐ Allows intermixed combinations of Am2716 and Am2732 E-PROMs as well as 1K x 8 and 2K x 8 static RAMs
- ☐ Total versatility for mapping the board's memory space via bipolar PROMs; assures the integrity of the memory map and eliminates the potential problems from multiple banks of DIP switches
- ☐ 20-bit address decoding
- ☐ Compatible with 8-bit and 16-bit CPUs
- ☐ Permits RAM/PROM to coexist in the same memory space
- ☐ Programmed control to enable/disable all combinations of PROM/RAM sockets; permits multiple independent program modules to occupy the same memory area
- ☐ Supports all types of Multibus data transfers under automatic firmware control
- ☐ I/O section includes:
  - RS-232 serial I/O port under USART control
  - Three 8-bit (or 24-line) parallel ports
  - Timing controller (Am9513) with five 16-bit high-speed counters
  - Nine interrupt sources jumper-selectable to bus interrupt lines
- ☐ 100% burned in for enhanced reliability

Am95/3310
Communication I/O Expansion Board

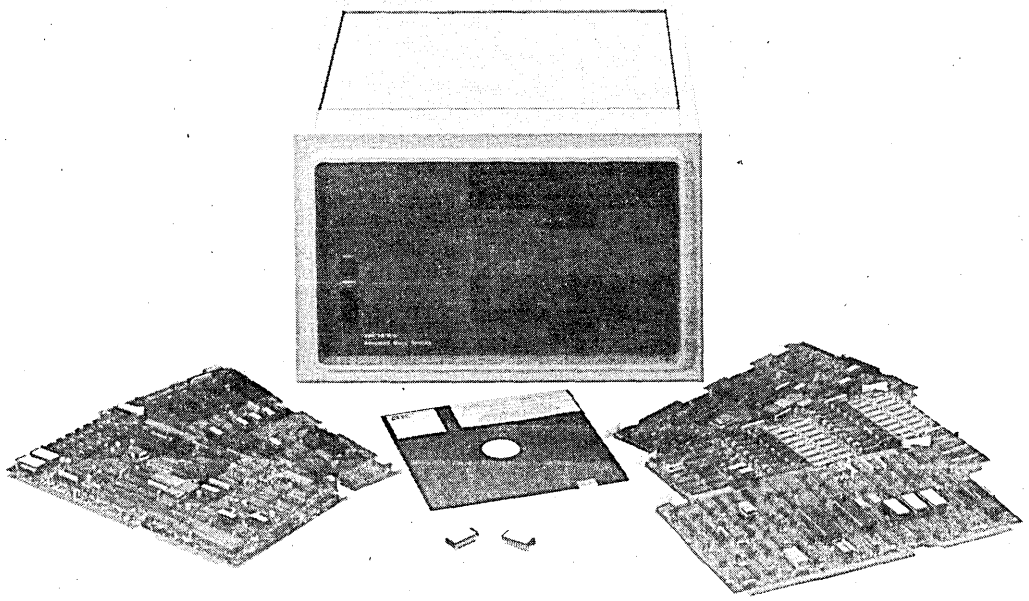


Features

- ☐ One of the Supercomponent™ family of LSI-intensive boards
- ☐ Four synchronous/asynchronous serial I/O communication channels with programmable baud rates to 38,400 baud
- ☐ Versatile parallel interface:
  - 24 TTL-compatible I/O lines or
  - 8 RS-232 driver and 16 RS-232 receiver lines
- ☐ Supports up to four modems and one Bell 801-type automatic call/answer unit
- ☐ Sixteen programmable interrupt lines for serial I/O or automatic call/answer support
- ☐ Two programmable 16-bit counter/timers
- ☐ Direct addressing of I/O ports on 20H boundaries
- ☐ Serial ports jumper selectable for 20mA current loops with opto-isolator sockets
- ☐ Compatible with 8-bit and 16-bit microprocessors
- ☐ 100% burned in for enhanced reliability
- ☐ Multibus† compatible

© IC MASTER 1983

Preconfigured Solutions



Preconfigured Solutions eliminate the tedious time-consuming tasks of system integration and test. AMD currently offers three configured solutions which allow the OEM to select the solution specific to his application needs.

Features

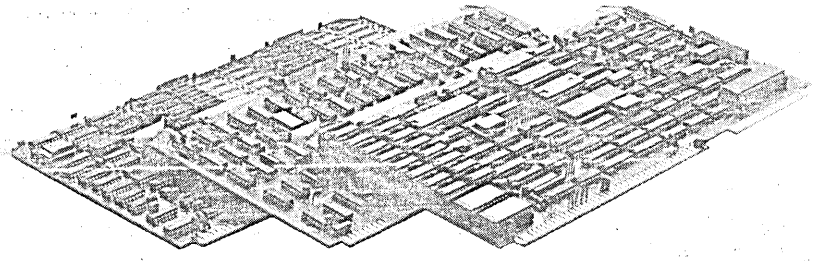
- ☐ Fully configured board sets
- ☐ Preconfigured Real-Time Multitasking Operating System from Hemenway Corporation
- ☐ Program Development on native processor
- ☐ Z8002 16-bit processing power
- ☐ Real-Time interrupt response
- ☐ Choice of memory only or disk-based systems
- ☐ Chcice of board sets or packaged systems
- ☐ Applications Prototyping on target hardware

© IC MASTER 1983

Advanced Micro Devices

MICROCOMPUTER BOARDS

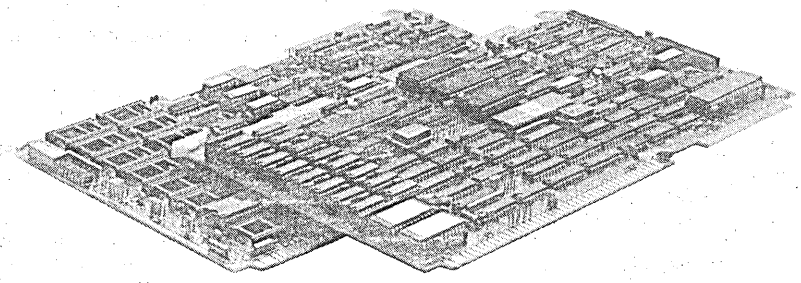
PS/1110
Configured Board Set



Features

- ☐ Configured to support the disk-based version of real-time multitasking operating system from Hemenway Corporation
- ☐ 4MHz Z8002 CPU board with 32KB dual-ported high-speed memory, two RS232 serial I/O ports and 24 parallel I/O lines
- ☐ 32KB high-speed dynamic RAM board with on-board memory refresh
- ☐ Intelligent single/double density floppy disk controller for 8" single sided floppy drives
- ☐ Compatible with our full line of Multibus† compatible card cages and system chassis

PS/1210
Configured Board Set

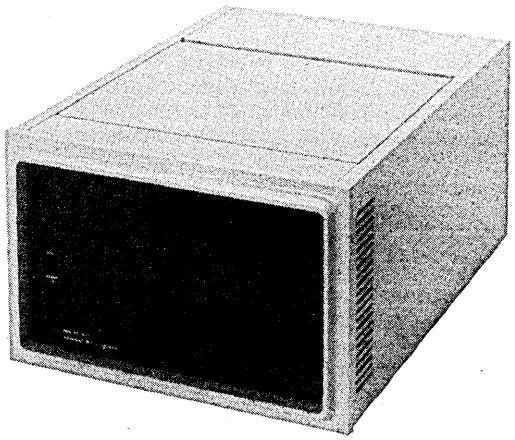


Features

- ☐ Configured to support the memory resident version of the real-time multitasking nucleus from Hemenway Corporation
- ☐ 4MHz Z8002 CPU board with 32KB dual-ported high-speed memory, two RS232 serial I/O ports and 24 lines parallel I/O lines
- ☐ PROM/ROM/RAM and I/O board with sockets for up to 64KB of PROM and up to 32KB of RAM, plus one RS232 serial I/O port and 24 lines of parallel I/O
- ☐ Compatible with our full line of Multibus† card cages and system chassis

© IC MASTER 1983

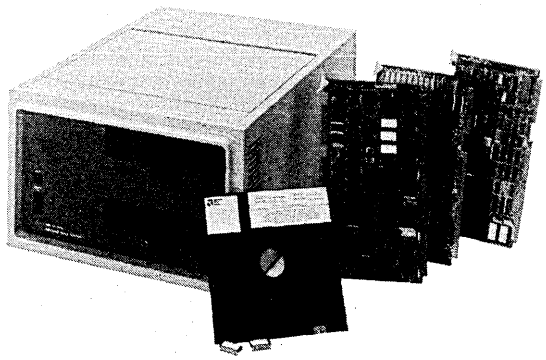
PS/1410
System Chassis



Features

- ☐ Compact desk-top or rack-mountable system chassis
- ☐ Seven slot Multibus† compatible backplane
- ☐ Two Shugart SA 800/801 floppy disk drives
- ☐ 25 amp 5 volt switching power supply
- ☐ Power and reset switches
- ☐ Rear connector panel and cable routing channel
- ☐ Top access for easy board installation, removal and inspection
- ☐ Cooling fans
- ☐ Optional slide mount rack kit

PS/1000
Packaged System

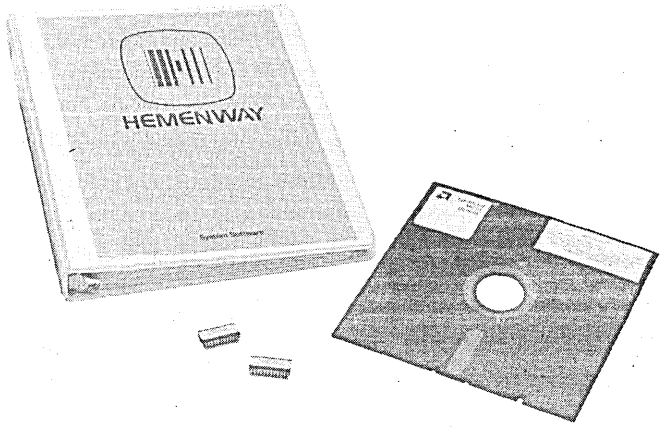


Features

- ☐ Compact desk-top or rack-mountable integrated system
- ☐ 4MHz Z8002 CPU board with 32KB dual port RAM, 2 serial I/O ports and 24 parallel I/O lines
- ☐ 32KB dynamic RAM board with on-board memory refresh
- ☐ Intelligent single/double density floppy disk controller for 8" single sided floppy drives
- ☐ Seven slot Multibus† compatible backplane
- ☐ Two Shugart SA 800/801 floppy disk drives
- ☐ 25 amp 5 volt switching power supply
- ☐ Real-Time Multitasking Operating System including text editor and file management system from Hemenway Corporation
- ☐ Z8002 relocatable macroassembler and linking loader
- ☐ Optional PASCAL/I compiler
- ☐ Optional ROMable Floating Point library

© IC MASTER 1983

PS/1310
Real-Time Multitasking
Operating System



This Real-time Multitasking Operating System (MSP/Z8002™) from Hemenway Corporation is the most powerful interrupt-driven operating system available for the Z8002* microprocessor. MSP/Z8002 has been specifically tailored to take advantage of the unique features available in the PS/1110 and PS/1210 Multibus† board sets. The Operating System also includes a text editor, relocatable macroassembler and linker, plus a comprehensive file management structure allowing dynamic allocation of file space as well as sequential and random file access.

Features

- ☐ Real-time clock (including dated files)
- ☐ Tasks may start/stop other tasks
- ☐ Mailbox facilities for simple inter-task communication
- ☐ Programmable delay control for task start/stop
- ☐ Dynamic task priorities
- ☐ Display task status execution
- ☐ Suspend task execution and restart commands
- ☐ Monitor entries for building user specified device handlers
- ☐ Complete device-independent I/O
- ☐ Memory-resident and transient commands for system flexibility and efficiency
- ☐ Command files
- ☐ Chaining and Overlaying of user programs
- ☐ Real-time multitasking nucleus fits in 8K and can be relocated anywhere in memory
- ☐ Supports serial or parallel printer

*Z8000 is a trademark of Zilog.

MSP/Z8002 is a trademark of Hemenway Corporation.

PS/1320
PASCAL/I – An Industrial Pascal Compiler

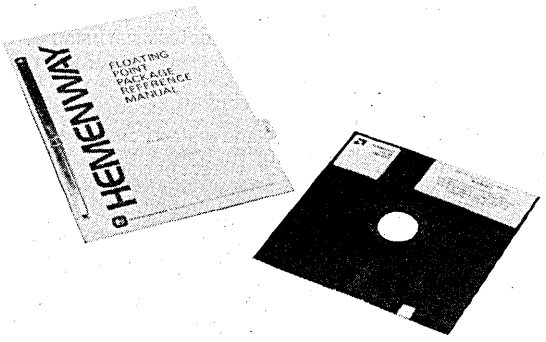
PASCAL/I™ is an industrial version of Pascal which supports all of the functions of PL/M-like compilers, but with Pascal syntax. The compiler is a true compiler that produces native code for the Z8002 microprocessor.

Features

- ☐ Port I/O
- ☐ 32-Bit arithmetic
- ☐ Access to memory on a byte or word basis
- ☐ Assembler routines callable for time-critical applications
- ☐ Entire set of Pascal control structures
- ☐ Allows interrupt or real-time operations
- ☐ Debugging using the MSP/Z8002 monitor
- ☐ ROMable object code
- ☐ High-efficiency code production
- ☐ Supports separate module compilation
- ☐ Floating point package optional

PS/1330
Floating Point Package

This package provides a unified set of floating-point support subroutines for the Z8002 microprocessor. The floating-point format used gives between 6 and 7 digits of precision and an exponent range from 1. E – 20 to 1.E + 20.



Features

- ☐ Fast execution
- ☐ Position-independent, ROMable code
- ☐ Re-entrant subroutines
- ☐ Integer to float, and float to integer conversion routines
- ☐ ASCII to float with free-format input conversion
- ☐ Float to ASCII string conversion
- ☐ Standardized calling sequence

PASCAL/I is a trademark of Hemenway Corporation.

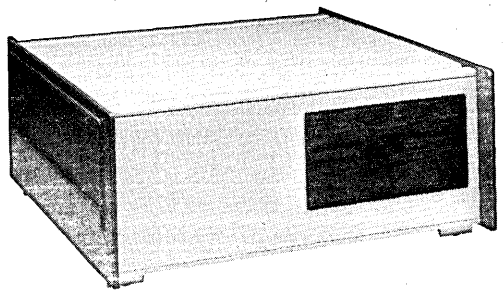
CREATIVE CMS MICRO SYSTEMS

6800/6809 BASED MPU MODULES AND SUPPORT HARDWARE

GENERAL PRODUCT OVERVIEW

Creative Micro Systems manufactures a broad line of support modules for microprocessor-based systems designed to fill the needs of a wide variety of applications. These modules are pin and outline compatible with the EXORbus standard as defined by Motorola, Inc. in publication M68EBS-(D1). These versatile modules are currently in extensive use in th fields of data acquisition, data communication and encryption, materials testing, automatic test equipment, process control, energy management systems, agricultural instrumentation, and small business data processing systems. Creative Micro Systems can provide the best hardware devices. The user simply adds the appropriate software.

The heart of each system is one of our Single Board Microcomputers. Three such modules are available offering the user a choice of the MC6802 or MC6809 processor. For applications that are heavy in mathematical operations, our 9611A Arithmetic Processor/Memory Module eliminates the need for arithmetic software and offers dramatic improvement in system through-put. As system requirements grow, they can be accommodated by our line of memory and Input/Output expansion modules.



New products are in development at Creative Micro Systems. If your system design requires a module not shown, please contact us to see if the capability has been recently added. Additional detailed technical data for each product is available on request.

1 9670 SERIES MAGNETIC DISC STORAGE MODULES

The 9670 series of Storage Modules is a family of mass storage subsystems that utilize flexible diskette and Winchester disc technologies. The modules are available in a variety of configurations and capacities. The 9670-100 series modules feature 8 inch Winchester drives with formatted capacities of 10, 20, or 40 megabytes and companion 8 inch diskette drives with 5 inch Winchester drives with formatted capacity of 14 megabytes and 5 inch diskette drives with formatted capacity of .65 megabytes. The 9670-500 series are similar to the 300 series modules with 14 megabyte Winchester drives but do not provide the companion diskette drive. The 9670-600 modules feature twin 5 inch diskette drives with formatted capacity of .65 megabytes each.

Each Storage Module is a complete subsystem with power supply and controller. A uniform interface to the processor bus is provided by the 9670 EPDT Host Adapter which provides data transfer efficiency approaching that of direct memory access while maintaining compatibility with all existing and future EXORbus systems. The diskette track formats are selectable by software control and include most of the popular one and two sided formats with FM or MFM encoding.

The Storage Modules are supported with the OS-9 operating system from Microware Systems Corporation. A software interface is also available to operate MDOS on these high performance systems.

2 9600A/9609/9619 SINGLE BOARD MICROCOMPUTERS

The 9600A and the 9609 are each complete microcomputers on a single card. The two modules are essentially identical except for the type of processor used. The 9600A utilizes the MC6802 while the 9609 utilizes the MC6809. The modules provide an optimized balance of features to fill the needs of most small systems and can be expanded as required to answer larger system demands. Both modules provide 1024 bytes of static RAM and 6144 bytes of single voltage EPROM which can be converted to static RAM in 2K byte blocks.

The I/O devices provided on each of the modules include two MC6850 ACIA's with RS-232C conditioning and two MC6821 PIA's. One of the MC-6850 device positions can be configured to accommodate an MC6852 for systems requiring a synchronous channel. An on-board bit rate generator provides fourteen standard rates for selection by the user. A triple programmable timer, MC6840, is also provided on both modules.

The 9619 Advanced Microcomputer provides upward compatibility with the 9609 and 9600A and offers many additional features. The onboard memory is available in many configurations from 2K of EPROM and 8K of RAM to 48K of EPROM and 4K of RAM. One 2K section of RAM is non-volatile. The 9619 also provides a non-volatile quartz-referenced time/date subsystem. Standard clock frequency is 2 mHz. The serial channels on the 9619 feature software selectable bit rate.

All of these single board microcomputers feature a power failure detection circuit and a priority interrupt vector generator. The modules are shipped with a resident monitor and debugger programmed in a portion of the EPROM for standalone use.

3 9611A ARITHMETIC PROCESSOR/MEMORY MODULE

The 9611A is a specialized support module which provides a dedicated binary fixed/floating point arithmetic processor and 16K bytes of memory on a single card. The processor section of the module utilizes the C8231A Arithmetic Processor to perform forty-three arithmetic operations in 16 or 32 bit precision. The module can also accommodate the AM9512 Floating Point Processor for use in systems which require greater levels of precision. The memory section of the module accommodates single voltage EPROMS or static RAMS of the 2K by 8 configuration and is arranged as two independent 8K blocks.

4 9616 32K EPROM/RAM MODULE

The 9616 is a 32,768 byte memory module configured as four independent 8K blocks. Each block can be individually placed at any 8K boundary by an onboard switch. Within each block the user may install any mix of EPROM or static RAM in 2K byte increments.

The 9616 is normally provided without memory devices. The desired arrangement of devices can be installed by the user in the sockets provided. The memory devices can also be ordered with the module if desired.

5 9635/9636/9637A NON-VOLATILE STATIC RAM MODULES

The 9635, 9636, and 9637A are static random access memory modules intended for use with either 1 mHz or 2 mHz systems. These modules provide storage that is protected from loss of data during periods of loss of system power. These modules utilize CMOS static memory devices that are supported by onboard batteries. Data guard is generated on the card and no external signals are required to maintain data integrity during system power transitions. The modules can be removed from the system chassis and transported without loss of data. The service life of the batteries is sufficient to provide three years of data retention before battery replacement is necessary.

The 9635 provides 64K bytes of storage arranged in 8 blocks of 8K each. The blocks can be individually selected for read-accesses and write accesses. The 9636 provides 32K bytes of storage also arranged in 8K blocks. The 9637A provides 16K bytes of storage arranged in 8K blocks with switch selectable boundaries. The 9637A can be write protected at the card level.

All of the Non-Volatile RAM modules can accommodate 20 address lines for use in memory-management systems. They are completely compatible with Standard EXORbus systems that use 16 address lines.

6 9634/9638 STATIC RAM MODULES

The 9638 is a 65,536 byte static random access memory module. It is configured as eight independent 8K blocks and each block can be individually enabled or disabled by onboard switches. The 9638 accommodates 20 address lines for use in memory-management systems but can also be used in standard 16 line systems. In addition to the 64K version, the 9638 is also available in partially populated versions of 32K and 56K capacity.

The 9634 is a 128K byte static random access memory module designed specifically for use in memory-management systems. It accommodates 20 address lines and is structured as a single 128K block. It can be intermixed with the 9635, 9636, 9637, and 9638 modules in a memory-management system.

The 9634 and the 9638 are suitable for use in 1 or 2 mHz systems. The modules are optimized for low power consumption, requiring less than three Watts of power from a single 5 Volt supply.

7 9657 INTELLIGENT PARALLEL I/O MODULE

The 9657 is an intelligent MC6802-based module that provides two parallel addressable channels that are under the control of the local processor. The module can perform as a bus-compatible peripheral controller and can assume much of the burden normally handled by the main processor. Each of the I/O ports can be cabled to multiple slave modules in bus fashion. The 9657-501, for example, is a slave module that provides optically isolated inputs for 64 contacts. One of the parallel addressable ports can accommodate 16 of these slave modules.

The 9657 ports can be bussed directly to the Opto 22 PAMUX II line of industrial interface products. Operations such as polling and sequencing of the external controls can be performed by the local processor with only the initial commands being generated by the main processor.

© IC MASTER 1983

8 9661 INTELLIGENT TIME-DATE SUBSYSTEM

The 9661 is a self-contained microprocessor-based system configured as a peripheral for use on the EXORbus. It provides a quartz referenced, non-volatile source of time and date information, and offers a variety of time-keeping and interrupt generation features. The 9661 is especially useful in real time process control applications and provides the main processor with extensive relief from the overhead of many timekeeping tasks. It can be used in 1 mHz or 2 mHz systems.

9 9671 INTELLIGENT FLOPPY DISC CONTROLLER

The 9671 is an intelligent controller for 8 inch diskette drives. This module is a 6809-based subsystem that responds to high level commands of SCSI (Small Computer Systems Interface, also known as the SASI or Shugart Associates Systems Interface). The 9671 combines the functions of the SCSI controller and host adaptor on a single EXORbus card. The unit will control a maximum of four drives with a variety of track formats, one or two sided, FM or MFM encoding.

The 9671 is normally used as a peripheral controller in the EXORbus chassis. It is equipped with a serial I/O port with RS-232C conditioning. This feature, along with an additional firmware package, will allow standalone operation of the controller.

10 9620A 16 CHANNEL PARALLEL I/O MODULE

The 9620A is a parallel interface module which utilizes 8 MC6821 Peripheral Interface Adapters mounted in sockets, each with its own flat cable connector. Sixteen 8-bit parallel I/O ports with control lines are therefore provided on a single card.

The 9620A occupies 32 sequential memory addresses. This address arrangement permits the use of a very tight polling loop for interrupt-driven systems and allows indexed addressing techniques to improve coding efficiency for multi-channel I/O.

The 9620A I/O lines are arranged in the cable according to the CMS parallel port standard. Any two such ports may be interconnected with standard ribbon cable connectors to perform as a full duplex parallel channel with handshaking protocol. This module is available in 1 mHz and 2 mHz versions.

11 9622 COMBINATION SERIAL-PARALLEL I/O MODULE

The 9622 is an interface module which utilizes six MC6821 Peripheral Interface Adapters, each with its own flat cable connector, and two MC6850 Asynchronous Communications Interface Adapters with RS-232C conditioning. Twelve parallel and two serial I/O channels are therefore provided on one card. An onboard bit rate generator allows the user to select any of fourteen standard rates for each serial channel.

The PIA I/O lines are unbuffered to allow the user unrestricted choice of data direction. The pin assignments conform to the standard order of other CMS modules. The arrangement is such that two PIA's can easily be interconnected for full duplex handshaking data exchange. The 9622 is available in 1 mHz and 2 mHz versions.

12 9640A MULTIPLE PROGRAMMABLE TIMER MODULE

The 9640A is a multiple programmable timer module which provides an array of eight MC6840 triple programmable timers. Each timer occupies eight locations of memory address space. The starting address for the array can be strap selected to any 64 byte boundary in system memory. The timer I/O lines are buffered and are available to the user at two flat cable connectors on the top edge of the card. The 9640A is available in 1 mHz and 2 mHz versions.

13 9650A 8 CHANNEL DUPLEX SERIAL I/O MODULE

The 9650A is an asynchronous serial interface module which utilizes 8 MC6850 Asynchronous Communications Interface Adapters with full RS-232C signal conditioning. An on-board bit rate generator simultaneously provides 14 standard rates that can be individually strapped to each ACIA.

The 9650A occupies 16 consecutive memory addresses. The lowest 8 of these access the 8 control/status registers and the next 8 access the transmit/receive data registers. This map arrangement allows optimum use of indexed addressing in I/O intensive systems and permits the use of a very tight polling loop in interrupt driven systems. The module is available in 1 mHz and 2 mHz versions.

14 96103 32/32/I/O MODULE

The 96103 is a parallel I/O module which provides 32 terminated TTL compatible inputs and 32 TTL compatible latched and buffered outputs. This module emulates the function of the Motorola M68MM03 Micromodule*.

The 96103 can be placed at any four-byte boundary of memory by setting the starting address in DIP switches on the card. The I/O lines are available at two edgeboard connectors at the top of the card. Input termination and output pullup resistors are in separate packages allowing additional flexibility for systems configuration.

15 96702 CONTACT CLOSURE MODULE

The 96702 is a 32-point reed relay contact closure module which features 32 form A contact sets terminated at two edgeboard connectors at the top of the card.

This module emulates the output function of the Motorola M68MM13B Micromodule*. It occupies four consecutive byte locations. Each bit of each byte controls the state of a contact. The 96702 also provides read-back of the relay driver states and allows initialization of all contacts to the open state after a system reset.

The 96702 can be placed at any four-byte boundary of memory by setting the starting address in DIP switches on the card. Varistor contact protection is available as an option for applications involving other than resistive loads.

16 9610/9612 UTILITY PROTOTYPING BOARD

Two utility prototyping boards are available in the 9600 family to provide the user with a convenient means to produce breadboards and low volume special purpose modules. Both boards feature +5 VDC and ground distribution in generalized pattern and pads to allow the installation of any mix of dual-inline devices with row spacings of 0.3 inch or 0.6 inch. The boards provide mounting positions for flat cable headers at the top edge and access to all system bus pins at the card edge connector.

The 9610 Utility Proto Board provides the greatest area for user construction while the 9612 Buffered Utility Proto offers the additional convenience of a prewired bus interface. This "front end" provides switch selectable address decoding and data bus buffering.

The 9612 has been optimized for use with Scotchflex+ Breadboard Plug Strip System. This system utilizes an insulation displacement technique to achieve component interconnections which dramatcally reduces construction time.

17 9614/9617/9618/EPROM PROGRAMMING HEADS

The 9614, 9617, 9618 are utility modules for use with M6800/6809 systems. They provide a convenient means for programming single-voltage EPROMS from data resident in the system memory. The Programming Heads are designed to derive all signals and power directly from the parallel I/O connector, P3, of any CMS Single Board Microcomputer. They can also be interfaced to any system which provides two unbuffered MC6821 Parallel Interface Adapters (PIA's), and a source of +5 VDC. The Programming Heads are designed for tabletop use and are connected to the system I/O port by a 50 conductor flat cable.

The Programming Heads are supported by firmware that provides convenient operator control over the programming process. Single voltage EPROMS of type 2716, 2732, and 2732A are accommodated by the 9614. Types 2716 and 2532 are programmable with the 9617. The 9618 accommodates the 28 pin 2764 and 27128 devices. Data in memory can be inspected and changed prior to programming.

The firmware is normally supplied in EPROM intended for use with 9600A, 9609, and 9619 Single Board Microcomputers. The source listing is provided to assist the user in adapting the programming heads to other system interfaces. Disc resident software for the OS-9 operating systems is also available and can be specified at order entry time.

18 9601A/9603A MOTHER BOARD

The 9601A Mother Board is available to provide convenient bus interconnection for multi-card systems. Sixteen connector positions are provided to distribute all power and signal lines to the cards. The 9610A also provides a ground plane, which is recommended for systems operating at 2 mHz. Threaded terminals are provided for attachment of power lines. An 8-position board, the 9603A is also available. Overall dimensions for the 9601A are 13 inches by 7.65 inches by 0.750 inches, and for the 9603A they are 6.5 inches by 7.65 inches by 0.750 inches. The connectors are located at 0.750 inch intervals.

The mother boards can optionally be equipped with a data bus termination resistor network. This option can be specified at the time of purchase or can be installed by the user.

19 9602B CARD CAGE

The 9602B Card Cage is designed for RETMA rack mounting requiring 10.5 inches of rack height and 8 inches of depth. The 9602B may also be used for platform mounting if it is assembled with the end plates reversed. The card cage is equipped with plastic card guides to accommodate a 9601A 16 slot mother board. The cage also provides mounting space for a 9604 System Power Supply.

20 9604 SYSTEM POWER SUPPLY

The 9604 System Power Supply is configured for mounting in the 9602B Card Cage. It is a switchmode-regulated supply providing four isolated outputs:

+ 5 VDC	1 Amp	−12 VDC 1 Amp
+12 VDC	15 Amps	− 5 VDC 1 Amp

A restriction of these currents, typical for switch-mode supplies is that the total regulated power form the supply is limited to 75 Watts. Efficient regulation is provided with an input variation from 92 to 138 VAC, 47 to 440 Hz. A combined switch and circuit breaker is provided on the power supply.

21 9630 CARD EXTENDER

The 9630 is a passive card extender to be used as a trouble-shooting aid. It extends any of the card family members to a position external to the card cage for easy access. The 9630 is equipped with labeled test point terminals on each of the system bus lines for ease of measurment or attachment of probes.

CROMEMCO COMPUTER CARD CAPABILITY

MULTI-PROCESSING AND INTELLIGENT I/O

The range of capabilities and versatility these cards give you is **impressive indeed.**

In processors, for example, you have a choice of CPU's including our new I/O Processor. This can be used as a satellite processor to do off-line processing, multi-processing, and to form intelligent I/O. It opens the door to a whole new group of applications and tasks.

HIGH RESOLUTION COLOR GRAPHICS

You can have beautiful high-resolution color graphics with our color graphics interface (SDI). You can select from over 4000 colors and have a picture with a resolution at least equal to that of quality broadcast-TV pictures.

You also have an unprecedented selection of memory including our unusual 48K and 16K **two-port** RAMs which allow high-speed color graphics.

POWERFUL SOFTWARE AND PERIPHERAL SUPPORT

There's much more yet you can do with the cards shown in this catalog, all made easy with our card cages and power supply.

Cromemco also offers the strongest software support in the industry (see next section in this catalog). In addition, there is a wide choice from independent vendors.

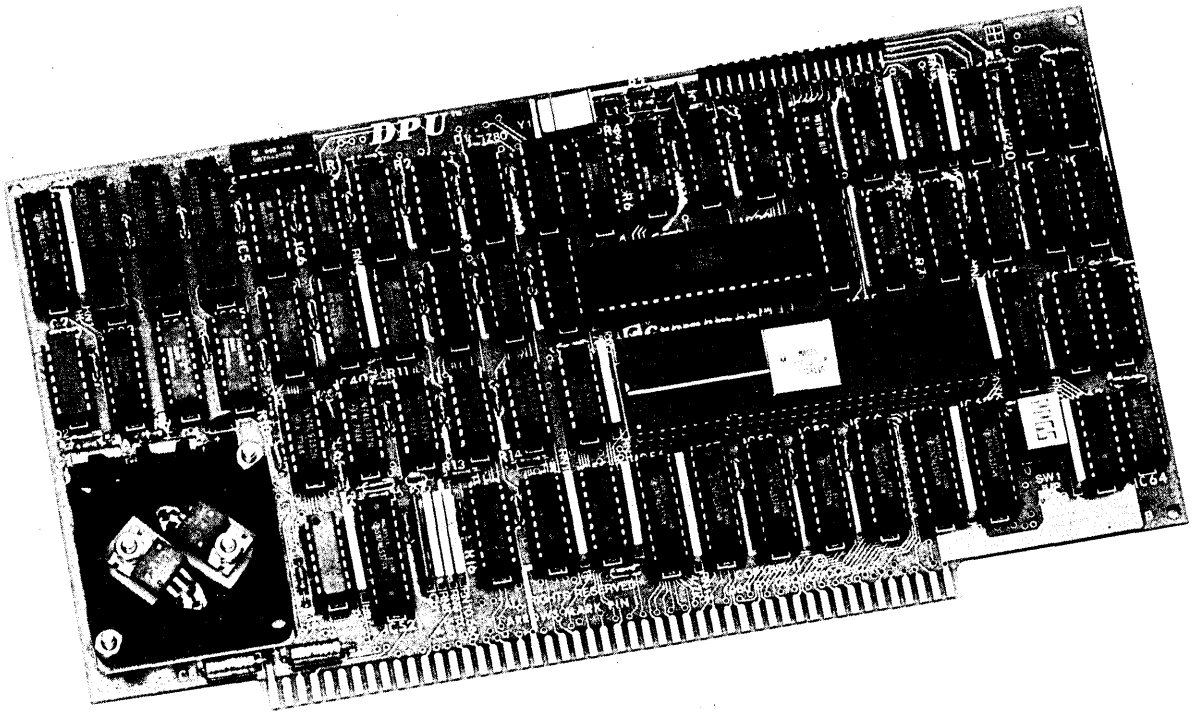
Dual Processor Unit with companion memory



- **68000-based**
- **Low-priced**

A FAST, EASY WAY TO START WITH THE 68000

This new Dual Processor Unit gives you an easy way to get started with the impressive 68000 processor.

The 68000 is widely accepted as the most powerful of the new processors, having a 32-bit wide architecture, and enormous 16 megabyte addressing range, 56 main instruction types, five main data types, and 14 addressing modes.

8-BIT AND 68000 SOFTWARE

The Dual part of the DPU refers to its on-board Z-80A processor. This gives access to existing CP/M* and other 8-bit software as well as having available a family of new 68000 software. This includes a wide range of high-level software such as a 68000 Assembler, FORTRAN 77, Pascal, BASIC, COBOL, and C.

Cromemco further offers our widely-admired CROMIX† operating system. This is like UNIX‡ but has even more features and gives multi-tasking and multi-user capability.

Switching between the 68000 and the Z-80A on the DPU is software-controlled.

Present customers can field-upgrade their Cromemco systems to use the DPU and still be able to run their present software with the Z-80A on the DPU.

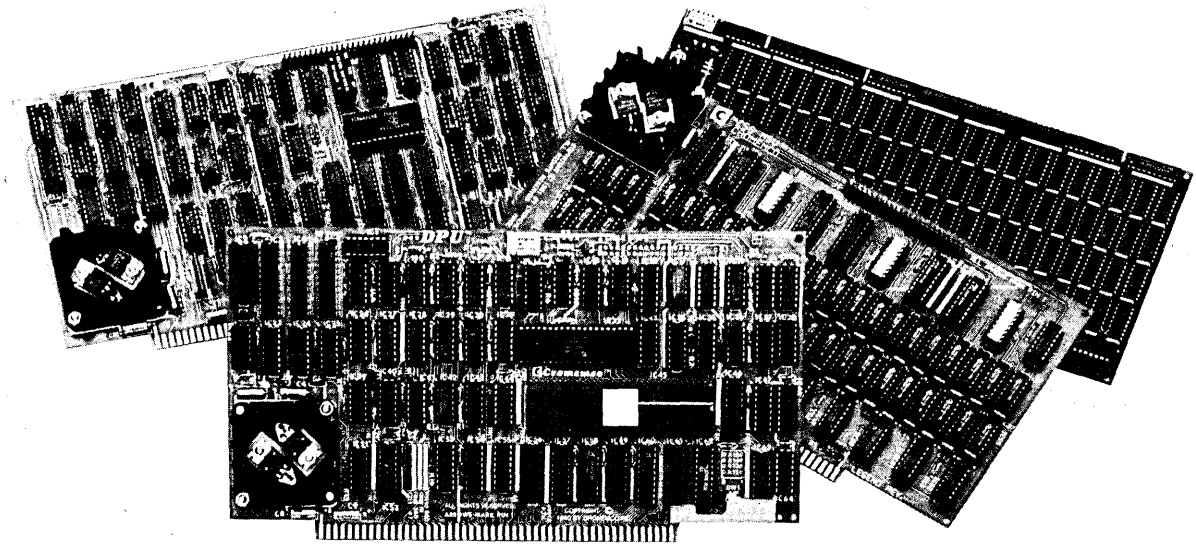
MEMORY

For use with the DPU, Cromemco offers a new group of RAM memory units. These are available in both 256-kilobyte and 512-kilobyte sizes. These units work under the control of a new Memory Controller Unit which supports either byte or word-width operation.

Cromemco

© IC MASTER 1983

Dual Processor Unit with companion memory (cont'd)



DPU card with memory and controller unit

A special feature of the memory units is their built-in error checking and correction capability. In concert with this capability the Memory Controller Unit has an error-logging feature which stores the location of errors encountered and identifies the particular RAM chip on a particular MSU that had the error. This feature is very helpful in system diagnostic and maintenance work.

Each Memory Controller Unit can control up to four Memory Storage Units—a total of 2 megabytes of RAM using the 512 kilobyte units.

For error checking and correcting, the memory units are designed to use 22 bits to encode each 16-bit word. A modified Hamming code is used which allows transparent detection and correction of single-bit errors and detection of double-bit errors.

TECHNICAL SPECIFICATIONS

Model DPU
Dual Processor Unit

Processors: MC68000 and Z-80A.
Clock Rate: MC68000: 8 MHz.
Z-80A: 4 MHz.
Instruction Set: MC68000: over 1000 instructions in 56 main types.
Z-80A: 158 instructions including the 78 instructions of the 8080 processor.
Power-on jump: Cromemco processor standard system, as well as user selectable jumps to any 4K memory boundary.
Processor control: Software controlled switching between MC68000 and Z-80A.
Bus: S-100 (Jumper selectable to IEEE-696)
Power requirements: +8 volts @ 2.0 amps.
Operating environments: 0-55°C.

Model MCU
Memory Controller Unit

Support Capacity: Up to four MSU memory cards.
Address Space: 16 Megabytes.
Bus: S-100, IEEE-696 compatible.
Power Requirements: +8 volts @ 1.5 amps.
Operating Environment: 0-55°C.

Models 256MSU and 512MSU
Memory Storage Units

Memory Capacity: 256MSU: 128K by 22 bits; 256K bytes.
512MSU: 256K by 22 bits; 512K bytes.
Memory Type: 64K dRAMs;
150 nanosecond access time.
Bus: S-100, IEEE-696 compatible.
Power Requirements: +8 volts @ 1.5 amps.
Operating Environment: 0-55°C.

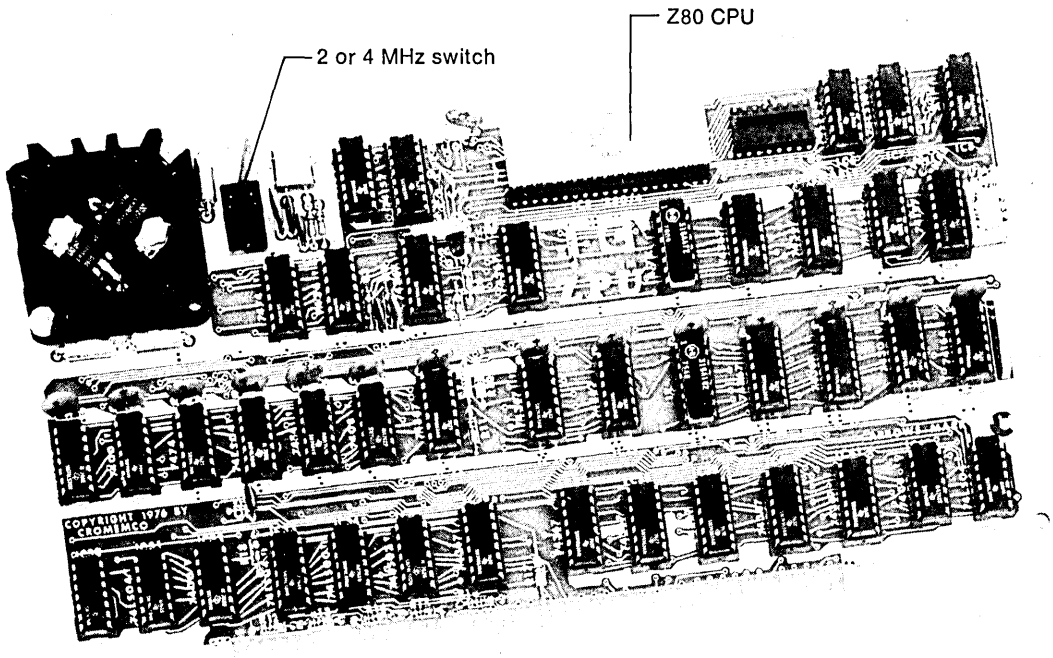
4 MHz CPU card



- Uses special Z-80 microprocessor
- Fast—4 MHz clock rate
- Does not require front panel for operation

2-5X MORE THROUGHPUT

Here is by far the most powerful CPU card now available. (It is the heart of our computer systems.)

It uses the Z-80 chip — in fact, it uses a high-speed version of the Z-80 certified by its manufacturer for 4 MHz operation.

The Z-80 has all the advantages of the 8080 and 6800—and enormously more.

And Cromemco's new Z-80-CPU card does enormously more.

4 MHz CLOCK RATE

First, this CPU lets you choose either a 2 or 4 MHz crystal-controlled clock rate. Right away that means you can have twice the throughput. Cuts program running time in half. Then the instruction set of the Z-80 reduces software even more.

The 2 or 4 MHz clock rate is switch-selectable as shown in the above photo.

POWER-ON MEMORY JUMPS

Cromemco's CPU also has some neat design innovations of its own.

For example, you'll like the simplified operation you get because upon power turn-on the CPU will jump to any desired 4K boundary in memory. No switch flipping to go through to begin your program. So you can also use this CPU card in stand-alone systems — and it can be operated without need of a front panel.

80 ADDITIONAL INSTRUCTIONS

You've probably heard that the Z-80 with its 80 new additional instructions is by far the most powerful chip around. It's true.

That means with our CPU you will be able to devise much more powerful (as well as faster) software than before.

MODEL	
Z-80-CPU assembled	Model ZPU

TECHNICAL SPECIFICATIONS
Z-80 Microprocessor Card

Processor: 4 MHz version of the Z-80.
Clock rate: 2/4 MHz (switch selectable)
Instruction set: 158 instructions including the 78 instructions of the 8080.
Power-on jump: jumper wire enabled.
Power-on jump locations: 16 locations switch selectable.
Wait State generation: 0-4 wait states jumper wire selectable.
M1 Wait State: Jumper wire selectable.
BUS: S-100.
Power requirements: +8 volts @ 1.1 A.
Operating environment: 0-55°C.

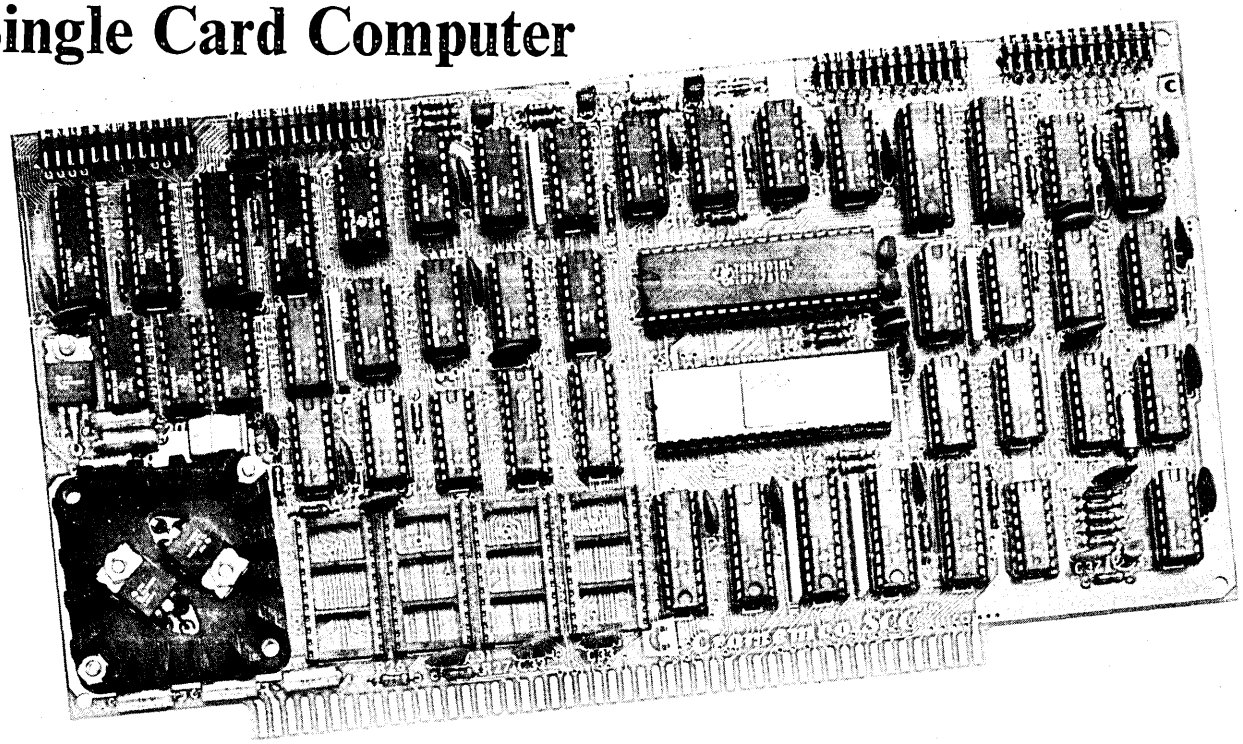
4 MHz
Single Card Computer



A COMPLETE 4 MHz COMPUTER

With our new Single Card Computer, Cromemco brings the power of the Z-80 and the flexibility of the S-100 bus to the dedicated computer environment.

This card was designed to get your application up and running fast. Naturally you get a 4 MHz operation. You also get up to 8K bytes of on-board 2716 PROM, and 1K byte of static RAM memory. Interfacing is a snap through the RS-232 (or 20 mA current loop) serial interface with programmable baud rates to 76,800 baud. This stand-alone card also gives you 24 bits of bidirectional parallel I/O, 5 programmable timers, vectored interrupts, and complete compatibility with all Cromemco cards.

Our Single Card is a complete computer. Only a power supply and your PROM software are required for operation. Yet the Single Card can be the core of an enormously expandable S-100 bus system since you can add additional memory, I/O, or even floppy disk drives as your application requires.

MONITOR/3K BASIC

Our well-known Z-80 Monitor and our 3K Control BASIC are available in 2316 ROM for use in your Single Card Computer. With this two-ROM set you are ready to begin using a single Card right away — no other memory or I/O is required. The monitor has 12 commands to aid you in program development. Our Control BASIC has 36 commands/functions and can directly access I/O ports and memory locations as well as call machine language subroutines.

MODELS

Single Card Computer assembled — Model SCC
Monitor and Control BASIC in two ROMs — Model MCB-216

TECHNICAL SPECIFICATIONS
SCC Single Card Computer

Processor: 4 MHz Z-80
Instruction Set: 158 instructions including the 78 instructions of the 8080.
ROM Capacity: 8K Bytes located from address 0000 to 1FFF
ROM Type: Intel 2716 PROM or equivalent
RAM Capacity: 1K Bytes located from address 2000 to 23FF
RAM Type: 4045, Static
Serial I/O Ports:
I/O levels: RS-232 or 20 mA current loop
Baud rate: 110 to 76,800 (software selectable)
Parallel Ports:
Input Port: 24 bits bidirectional
Output Port: 24 bits bidirectional
Input Load: One TTL equivalent
Output Drive: 20 TTL loads
Interval Timers:
Number of timers: 5
Timer Range: 0-16.32 milliseconds (software selectable)
Timer resolution: 64 microseconds
Vectored Interrupts:
Number of restart locations (Z-80 mode): 65,536
General Information:
UART type: 5501
Bus: S-100
Power requirements: + 8 volts at 1.4 A
+18 volts at 70 mA
−18 volts at 25 mA
Operating environment: 0-55°C

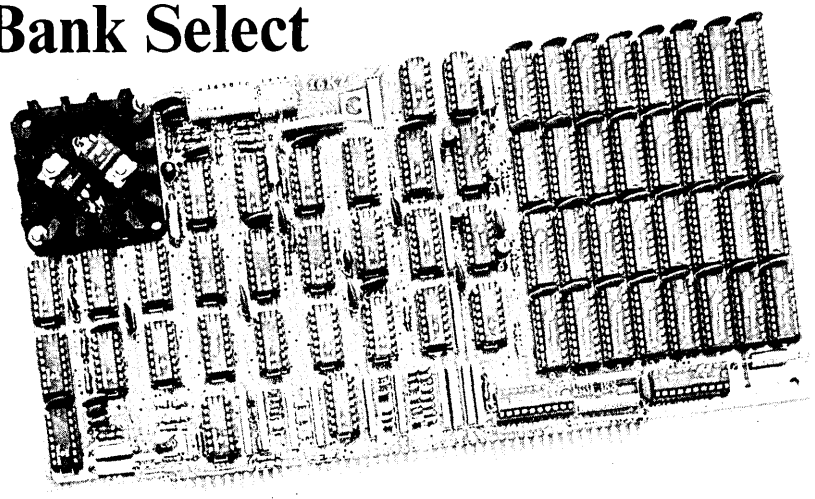
16K RAM card with Bank Select



- The fastest available
- No wait states required at either 2 or 4 MHz operation
- Offers expandability to a half megabyte with Bank Select
- Can be used for time-sharing
- Dynamic refresh fully transparent

FAST, EXPANDABLE

Not only is this the fastest 16K RAM card available but it is expandable to a half megabyte.

It will operate at 4 MHz *with no wait states.*

TIME SHARING

One of the best examples of the power of the Bank-Select feature is that it will let you achieve a time-share system with minimum software overhead.

Each user (there can be up to 6) will be confined to his own bank of memory.

S-100 BUS COMPATIBILITY

This memory can be plugged into any S-100 bus computer. That includes the entire family of Cromemco computer systems.

START WITH THE BEST

Sooner or later you'll inevitably want larger memory. So start with Cromemco and be sure you'll have the expandability and high-speed performance you'll need.

MODEL

16K RAM Memory assembled, burned-in and tested
Model 16KZ

TECHNICAL SPECIFICATIONS
Model 16KZ RAM Card

Memory capacity: 16K bytes.
Memory type: 4050-2 RAM.
Memory access time: 200 nanoseconds.
Wait States at 2 MHz: none required.
Wait States at 4 MHz: none required.
BUS: S-100.
Power requirements: + 8 volts @ 0.8 A
+18 volts @ 0.5 A
−18 volts @ 10 mA
Operating environment: 0-55°C.

MEMORY BANK SELECT

Memory bank select is a feature incorporated on Cromemco memory boards that allows the expansion of memory-space beyond 64K bytes. With bank select, memory space may be organized into 8 banks of 64K bytes each for a total of one-half megabyte of memory.

With bank select each memory board may reside in one or more of the 8 possible memory banks. An 8-position DIP switch on the board is used to select each of the banks in which the board resides.

The active bank or banks of memory are selected under software control. Output port 40H is dedicated to this function. Each of the 8 bits of data of output port 40H is used to turn on or off the corresponding bank of memory. A "1" in the corresponding bit position will turn on the memory bank. A "0" will turn it off. All circuitry required to detect the output of port 40H is included on the memory card itself.

Bank select provides a convenient method by which to expand system memory space beyond 64K. Bank select also permits the implementation of time-sharing systems with a minimum of software overhead—up to 6 users can use the system simultaneously with each confined to his own bank of memory.

Cromemco

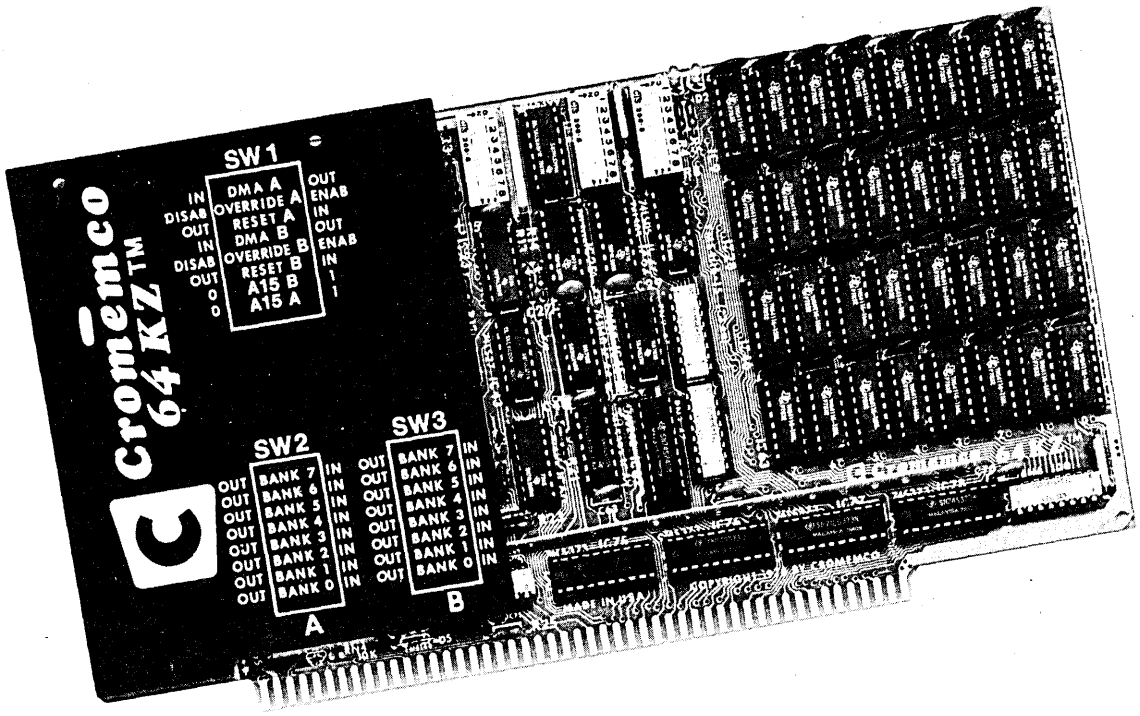
64K RAM card with Extended Bank Select



- Enormously expandable
- Guaranteed 4 MHz operation from 0-55°C
- Low power

This new 64-kilobyte RAM card is fast and tremendously expandable in keeping with Cromemco's objective of providing you with obsolescence insurance.

The Model 64KZ is organized as two 32K blocks of memory. Each block can be placed either in high-memory space (address 8000-FFFF) or low-memory space (address 0000-7FFF).

Each block can further be placed in any of 8 different memory banks. Address and bank assignment of each 32K block is switch selectable.

Another feature is that each 32K block can be independently switched to be selected or de-selected after reset.

ENORMOUSLY EXPANDABLE

With our Bank Select feature you can expand memory space from 64K to 512K in eight banks.

Now with the Extended Bank Select feature in this new card you can expand to as much as 16 megabytes.

The 64KZ is fully tested to be compatible with all Cromemco products.

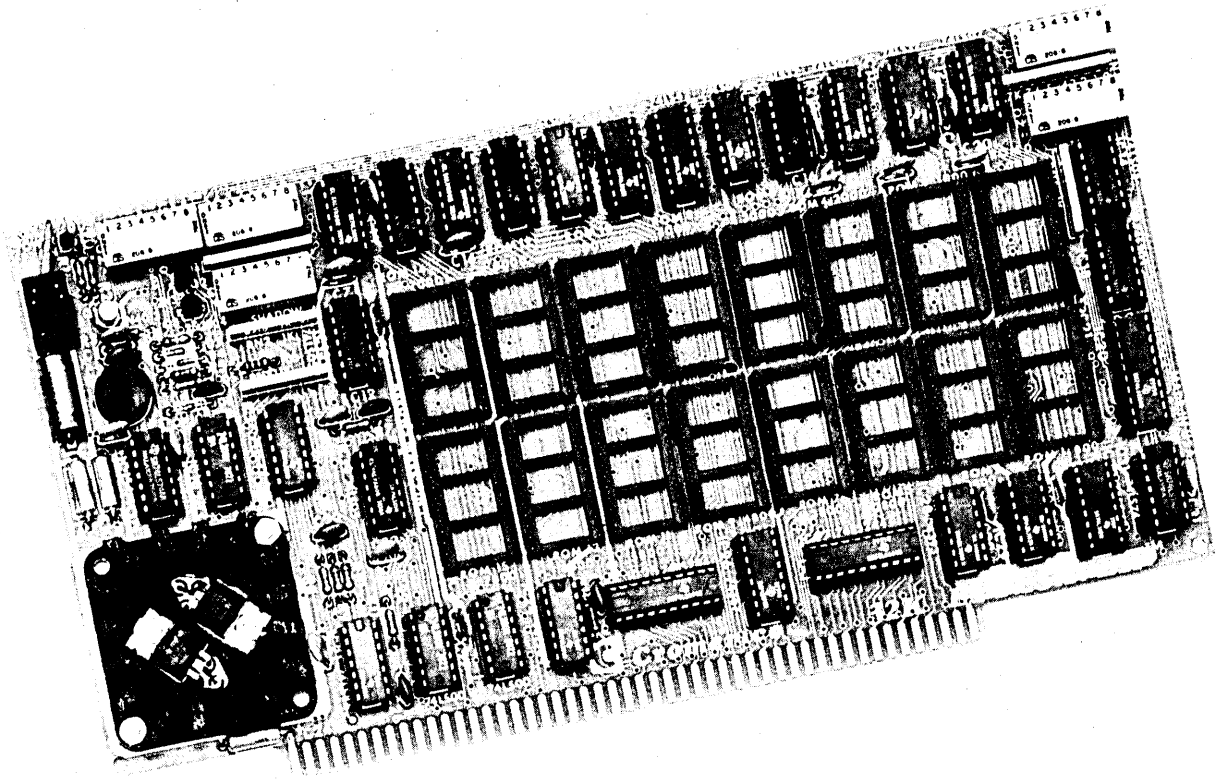
32K BYTESAVER® memory board with 2716 PROM programmer



32K BYTESAVER® PROGRAMS THE NEW, HIGH DENSITY 2716 PROM

Many customers have asked for a card that has the ease of use and high flexibility of our popular BYTESAVER® 2708 PROM card but one that could use the new 2716 2-kilobyte PROM.

Now Cromemco's 32K BYTESAVER® card gives you a full 32-kilobyte capacity of non-volatile storage for those ROM-intensive applications.

You also get the convenience of an on-board 2716 programmer.

The new 32K BYTESAVER® holds up to 16 of the 2716 PROMs. Switches are provided to: (1) protect and un-protect PROMs individually or in groups for programming (2) shadow ROM socket pairs (allows external RAM to overlap portions of ROM address space) (3) select card address, and (4) control the powerful Bank-Select and DMA IN-OUT features.

NO SPECIAL SOFTWARE NEEDED

A simple, one-time write of the desired data into an erased PROM with the on-board programmer turned on is all that is required to store information quickly and permanently.

MODEL

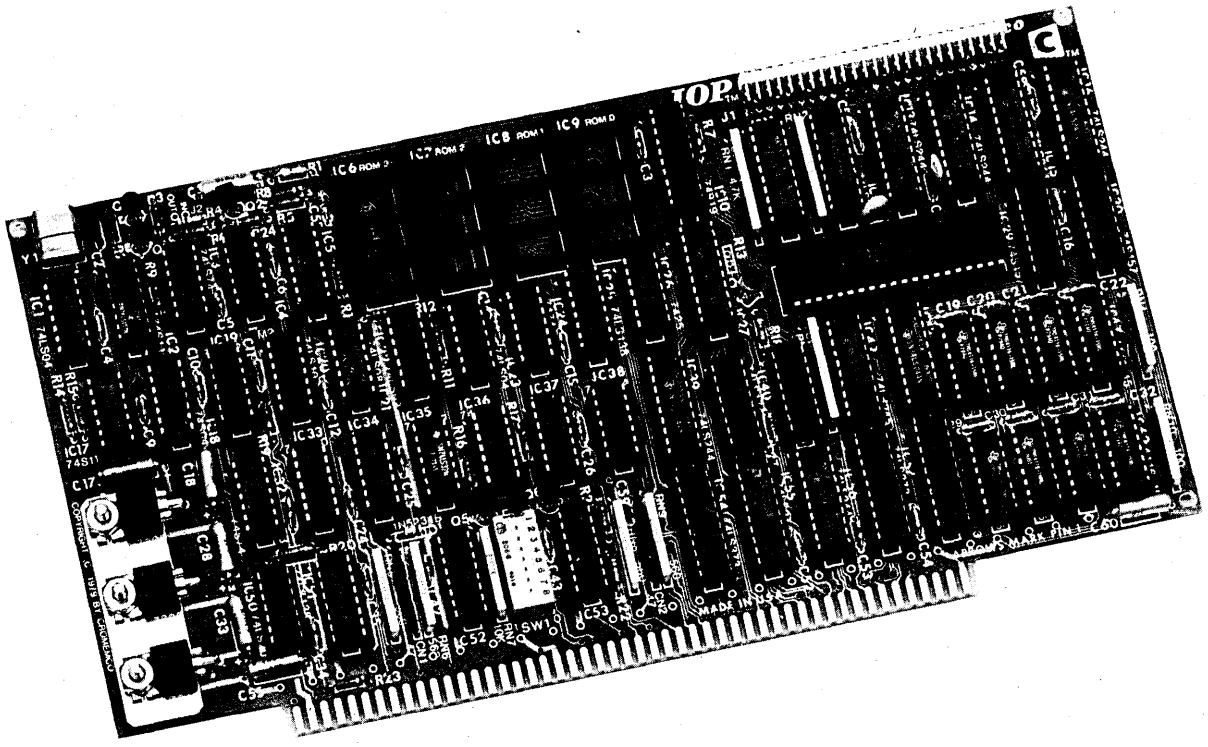
I/O Processor



MULTI-PROCESSOR CAPABILITY

With this new I/O Processor you can now have multi-processor capability in your S-100-bus system.

The new Model IOP is a true single-card computer — one that has a fast Z-80A processor, 16K bytes of RAM, and up to 16K bytes of PROM capacity.

The IOP interfaces to the S-100 host processor by means of simple "input" and "output" instructions.

SATELLITE PROCESSOR

The IOP can be used either alone or with other IOP cards as a satellite processor on the S-100 bus.

Or the IOP can process I/O channels and interface to other devices such as the Cromemco Quadart through the C-bus connector on the top edge of the card.

The IOP is an advanced development that brings a new dimension of computer architecture to Cromemco computer systems.

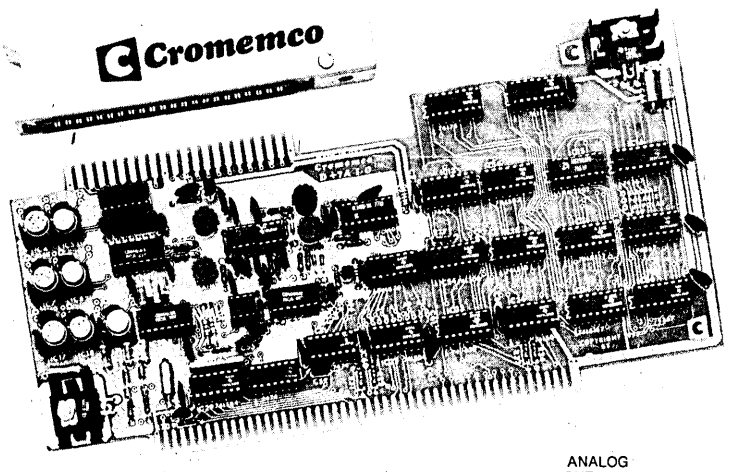
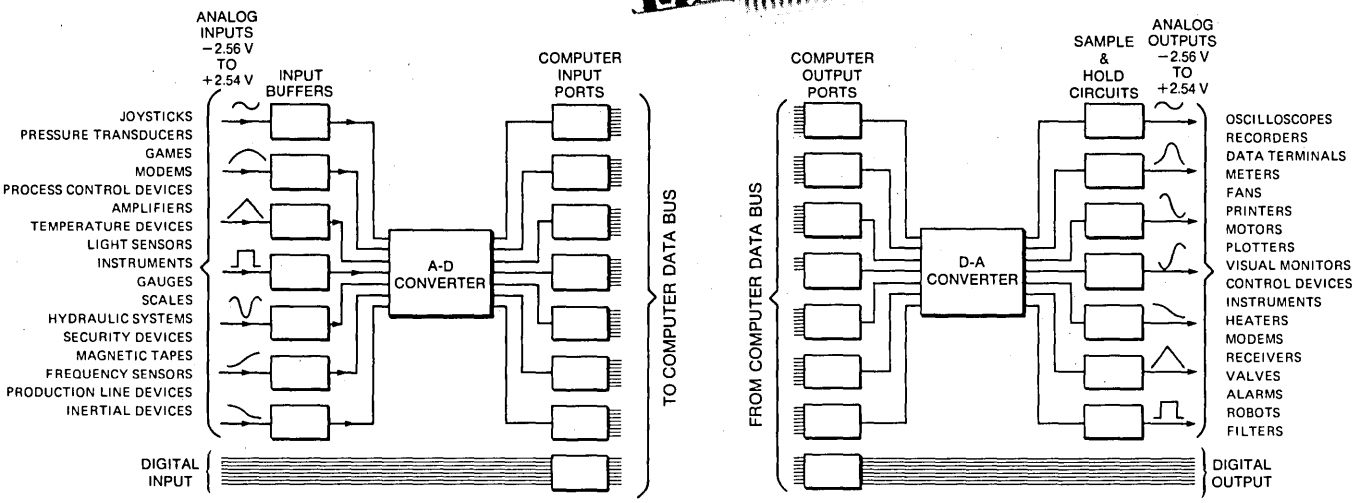
D+7AI/O™ Multi-channel microcomputer analog interface





Now you have a way to get analog information into and out of your microcomputer. It's an easy, fast, and unbelievably inexpensive way.

It's Cromemco's new D+7A® high-performance I/O module which gives you:

- 7 channels of 8-bit analog-to-digital conversions (to input analog data to the computer)
- 7 channels of digital-to-analog conversion (to output computer data in analog form)
- an 8-bit parallel I/O port to input and output data in digital form.
- a fast conversion time of 5.5 microseconds.

A MULTITUDE OF USES

The D+7A makes it easy to use your computer for the jobs you want it to do—such as process control, digital filtering, games, oscilloscope graphics, speech recognition, speech and music synthesis.

The D+7A lets you input and output analog data with all sorts of devices: joysticks, ham radio gear, measurement instruments, machine tools, transducers, control systems, motors, recorders, and plotters, to name just a few.

NO FURTHER SOFTWARE NEEDED

The D+7A I/O plugs directly into the Cromemco microcomputers. Analog signal range is from — 2.56 to + 2.54 volts (20-millivolt increments) on both input and output sides.

Simple "Input" and "Output" instructions initiate A/D conversion and read in or out the ensuing 8 bits of data. No further software is required. During conversion the D+7A holds down the computer "Ready" line.

MODEL

D+7A I/O assembled, burned-in and tested — Model D+7A

Each D+7A includes a connector to connect to the 8 input and 8 output ports.

TECHNICAL SPECIFICATIONS
D+7A A/D & D/A Interface

Analog input ports:
- **Number of input ports:** 7
- **Input voltage range:** −2.56 to +2.54 volts
- **Input bias current:** 2 microamps max.
- **Input impedance:** 20 Megohms || .001 μF, 1 KHz sample rate. 2 Megohms || .001 μF, 10 kHz sample rate.
- **Resolution:** 8 bits.
- **Conversion time:** 5.5 microseconds.
- **Accuracy:** ±20 millivolts.

Analog Output Ports:
- **Number of output ports:** 7
- **Output voltage range:** −2.56 to +2.54 volts
- **Output impedance:** 0.25 ohm.
- **Maximum load current:** 1.5 mA
- **Resolution:** 8 bits
- **Conversion time:** 5.5 microseconds
- **Accuracy:** ±20 millivolts
- **Drift rate:** Less than 10 mV/sec at 25°C

Parallel I/O Port:
- **Input port:** 8 bits.
- **Output port:** 8 bits.
- **Input load:** one TTL equivalent.
- **Output drive:** 10 TTL loads.

General Information:
- **BUS:** S-100.
- **Power requirements:** + 8 volts @ 0.4 A, +18 volts @ 30 mA, −18 volts @ 60 mA

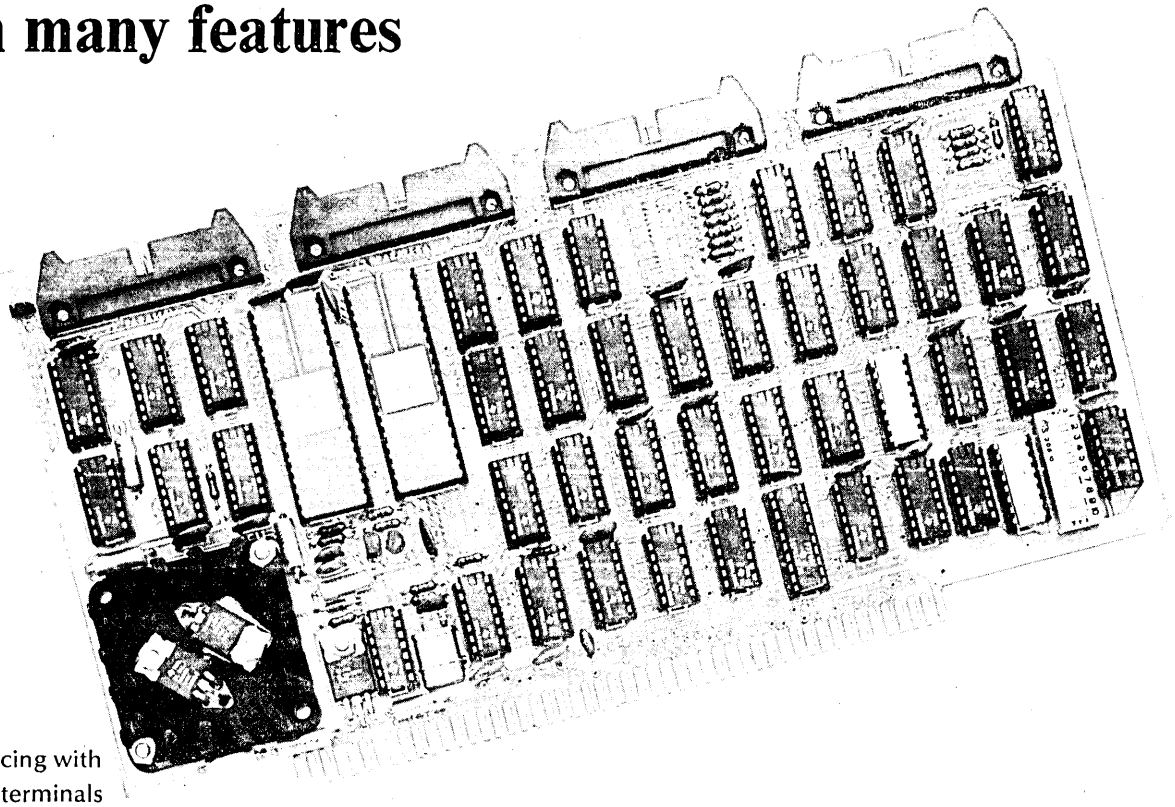
TU-ART digital interface with many features



For interfacing with

- CRT terminals
- line printers
- modems
- other devices

FAST — SOFTWARE SELECTABLE BAUD RATES UP TO 76,800 BAUD

Here's a very convenient interface to let you couple not to one but to two terminals or other devices. So we call it a TU-ART.

It has two serial I/O ports, two 8-bit parallel I/O ports, and 10 independent, programmable interval timers.

Baud rates are software-selectable from 110 to 76,800 baud.

VECTORED INTERRUPTS

Yet another special convenience of the TU-ART is its vectored prioritized interrupts. It is able to support powerful vectored interrupt structure of the Z-80 microprocessor.

INTERVAL TIMERS

The 10 interval timers, since they have real-time clock capability, offer a very wide range of control possibilities.

Each timer range is from 0 - 16.32 milliseconds and is software selectable.

MODEL

TU-ART assembled, burned-in and tested — Model TRT

CABLES

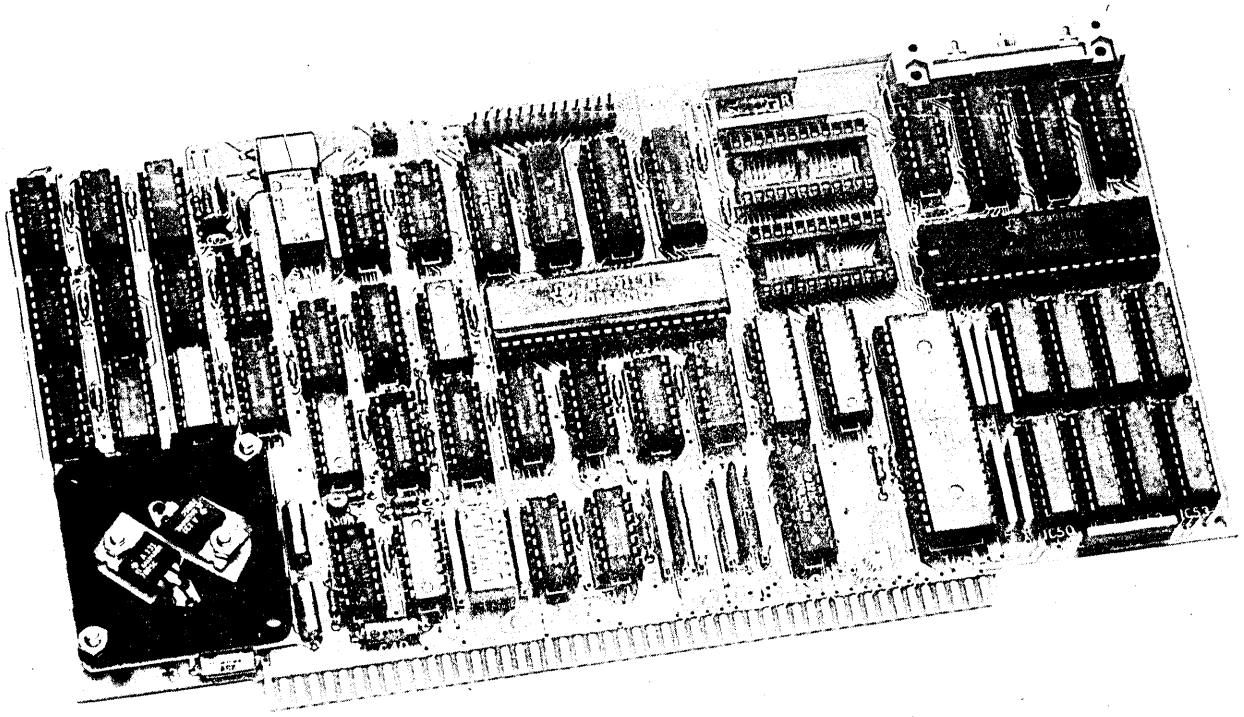
GPIB



- **General Purpose Interface Bus Card**
- **Provides IEEE 488 Compatibility to S-100 computers**

This card enables you to connect your Cromemco computer to measuring and control equipment that has an IEEE-488 port. By this means such arrangements as a computer-operated measuring and control system can be devised.

The Cromemco GPIB card contains a dedicated Z-80 processor along with 4K of RAM and two 2716 sockets that provide for 4K of EPROM. Connectors at the top of the card are for the IEEE-488 interface. There is also connection for an external TTL parallel I/O port. Switches select the I/O address through which the computer communicates with the card and the address to which the card responds.

The GPIB card can interrupt the host computer over the S-100 bus with either a software maskable or non-maskable interrupt and is equipped with the Cromemco interrupt priority daisy chain. The dedicated Z-80A on the card can be interrupted by the host, the GPIB chip, or the reception of data from the external input port. On-board priority determination is fully software defined, employing a hardware poll of the possible interrupt devices over a single input port.

TECHNICAL SPECIFICATIONS

Model GPIB
Interface Bus Card

IEEE-488 Functions: C — Controller with Pass Control capability; T, TE, L, LE — Talker and/or Listener; SH, AH — automatic Source and Acceptor Handshake; DC, DT — Device Clear and Device Trigger; SR — Service Request; PP — Parallel Poll; RL — Remote/Local with Remote Lockout.
Processor: Z-80A clocked at 4.000 MHz.
ROM Memory: Socket space for 4 Kbytes of TI 2516, Intel 2716, or their generic equivalents (user supplied).
RAM Memory: 4 Kbytes of 9124 (1K x 4) static RAM (included).
S-100 Bus Interface: Four 8-bit parallel I/O ports; the GPIB card may issue non-maskable and/or vectored maskable interrupt requests to the Host; the Host may issue maskable interrupt requests to the card.
GPIB Bus Interface: The 24 IEEE 488 bus lines interface to a GPIB card connector.
Utility Interface: One 8-bit parallel input port and one 8-bit parallel output port provide a general purpose interface at a GPIB card connector.
LSI Device Types: Z-80A CPU, TMS 9914 GPIB Adapter.
Power Requirements: +8 VDC @ 1.5 Amps (max).
Operating Environment: 0-55°.

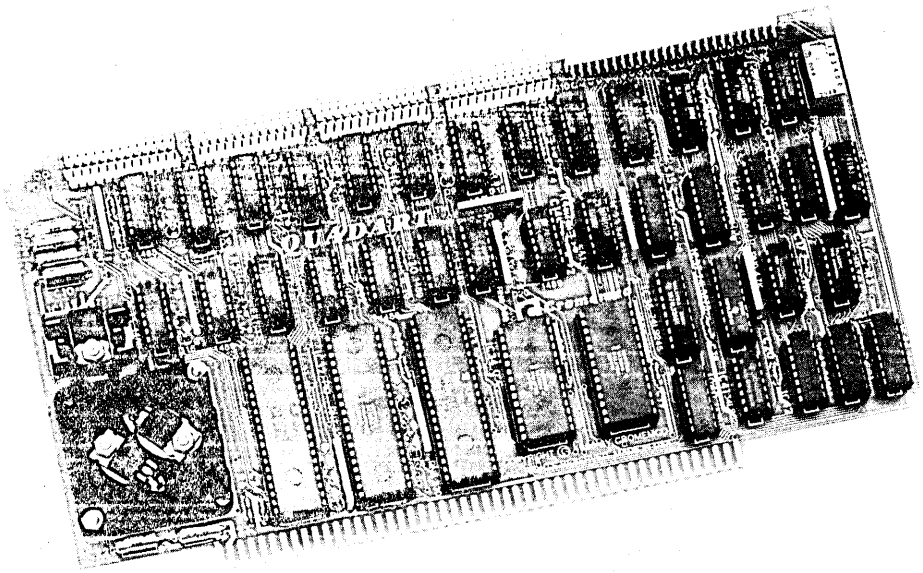
Quadart



Supporting Serial Protocols

- **Asynchronous**
- **Synchronous Bit (e.g., SDLC)**
- **Synchronous Byte (e.g., Bisync)**

SIMULTANEOUSLY INTERFACES UP TO FOUR SERIAL CHANNELS

In this versatile new QUADART serial communications interface card you get the power to satisfy virtually any high-speed data communications application.

You get four independent serial channels, each supporting Asynchronous, Synchronous Byte mode (e.g., Bisync), and Synchronous Bit mode (e.g., SDLC) protocols with complete handshaking for modems. Serial protocol is software-selectable for each channel.

Our unique loopback feature gives you the capability to connect data from any channel to any other channel, data from any modem to any other modem, or the capability for any modem/channel combination to be used for diagnostics and selftest.

Baud rates for each may be software-selected from 0 to 300K baud (asynchronous to 19,200 baud).

VECTORED INTERRUPTS

The QUADART also supports the powerful internally-prioritized vectored interrupt structure of the Z-80 microprocessor which has become a trademark of Cromemco interface cards.

INTERVAL TIMERS

You have real-time clocking capability with four interval timers each having periods as small as 4.00 microseconds. Up to three timers can be cascaded to provide a 1.000-second time interval.

The software-selectable time range of each timer is 0-16.384 milliseconds.

C-BUS

The control for the QUADART is from the C-Bus provided by Cromemco's powerful I/O processor computer, Model IOP. The IOP interfaces between your S-100 bus and the C-bus and can support up to four QUADARTS with full interrupt capability.

TECHNICAL SPECIFICATIONS

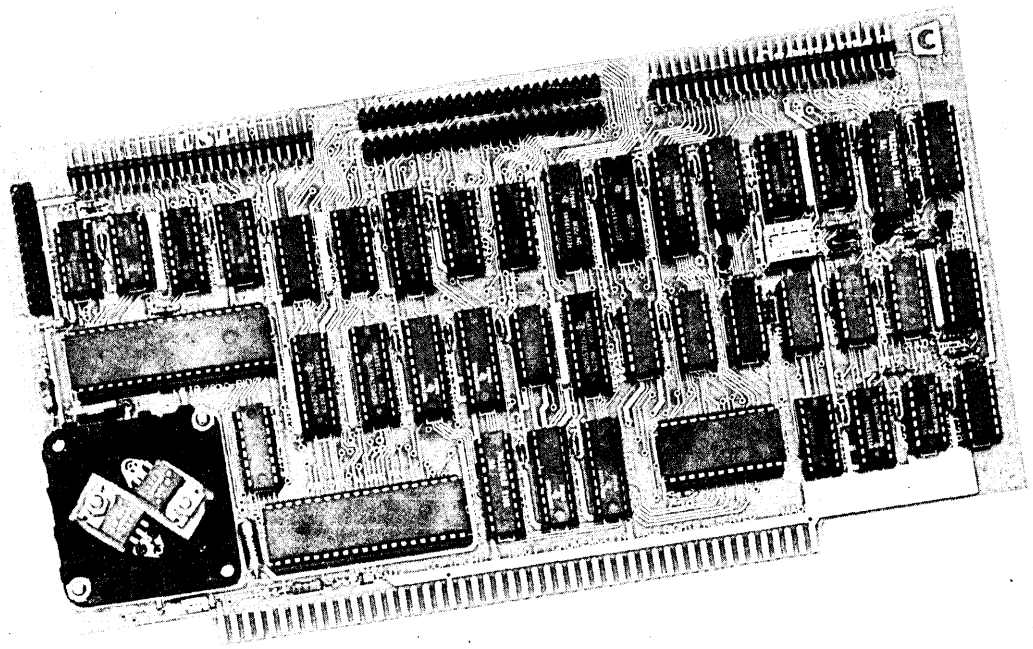
Serial/Parallel Interface



- **Three parallel I/O ports**
- **Two serial I/O ports**
- **Handles rapid data bursts**
- **Synchronous/asynchronous communication**

This new card interfaces to the C-Bus of our I/O Processor card and provides general-purpose I/O capability as well as serial communications capability.

The card has three parallel I/O ports and two serial ports.

Two of the three parallel ports are TTL-buffered for general usage. The third port is buffered by a FIFO to permit inputting and outputting of rapid bursts of data. For example, up to 16 bytes can be stored in the FIFO at I/O clock rates up to 10 megabytes/second.

The two serial ports are single full duplex serial channels that facilitate communications applications. One port is for synchronous communication (SDLC or HDLC) at rates up to 800K bits/second.

The second serial port is a serial RS-232C interface for asynchronous communication. It has a programmable data rate of up to 9600 bps.

TECHNICAL SPECIFICATIONS
Model CSP
Serial/Parallel Interface

CSP Controller: Cromemco Input/Output Processor (IOP) board.

Parallel Interface: Compatible with Cromemco Model TDS 9 Track Tape Drive.

Parallel Output: Data: 8 bits wide plus an End of Transfer bit; 16 by 9 bit FIFO buffered; approximately 200 Kbytes per second maximum continuous (Z-80A I/O Block Move), approximately 10 Kbytes per second maximum burst (FIFO limited).
General Purpose: 15 control bits in two output bytes.
Drive Capability: TTL levels; 10 meter length twisted pair or ribbon cable with 220/330 ohm termination.

Parallel Input: Data: 8 bits wide; 16 by 8 bit FIFO buffered; approximately 200 Kbytes per second maximum continuous (Z-80A I/O Block Move), approximately 10 Kbytes per second maximum burst (FIFO limited).
General Purpose: 16 status bits in two input bytes; vectored maskable C-Bus interrupt requests generated on software selected bit states.
Termination: TTL levels; 220/330 ohm terminations on all data and status lines.

Cartridge Interface: Compatible with Cromemco Model/CDS Cartridge Tape Drive.

Cartridge Modes: Serial Asynchronous, Byte Synchronous (BiSync) and Bit Synchronous (SDLC/HDLC) under the management of a Z-80 SIO device; vectored maskable C-Bus interrupt requests generated on software-selected status conditions.

Cartridge I/O: Maximum data rate approximately 800 kbits per second;
TxC and RxC clocks supplied by Cartridge peripheral; TTL levels with 220/330-ohm terminations on input lines.

Terminal Interface: RS-232c DTE connection

Terminal Modes: Same as Cartridge Modes above although Asynchronous Mode would typically be selected.

Terminal I/O: Maximum data rate 9,600 bits per second: TxC and RxC supplied by an on-board timer with software selectable bit rate; RS-232C levels; circuits RTS, CTS, DSR and DCD may be used either for modem control or for general purpose RS-232C level I/O.

Bus Compatibility: Standard-100 (S-100)
Cromemco Bus (C-Bus)

Power Requirements: + 8 VDC @ 1.5 Amps (max)
– 18 VDC @ 25 mAmps (max)
+ 18 VDC @ 25 mAmps (max)

Operating Environment: 0-55°C.

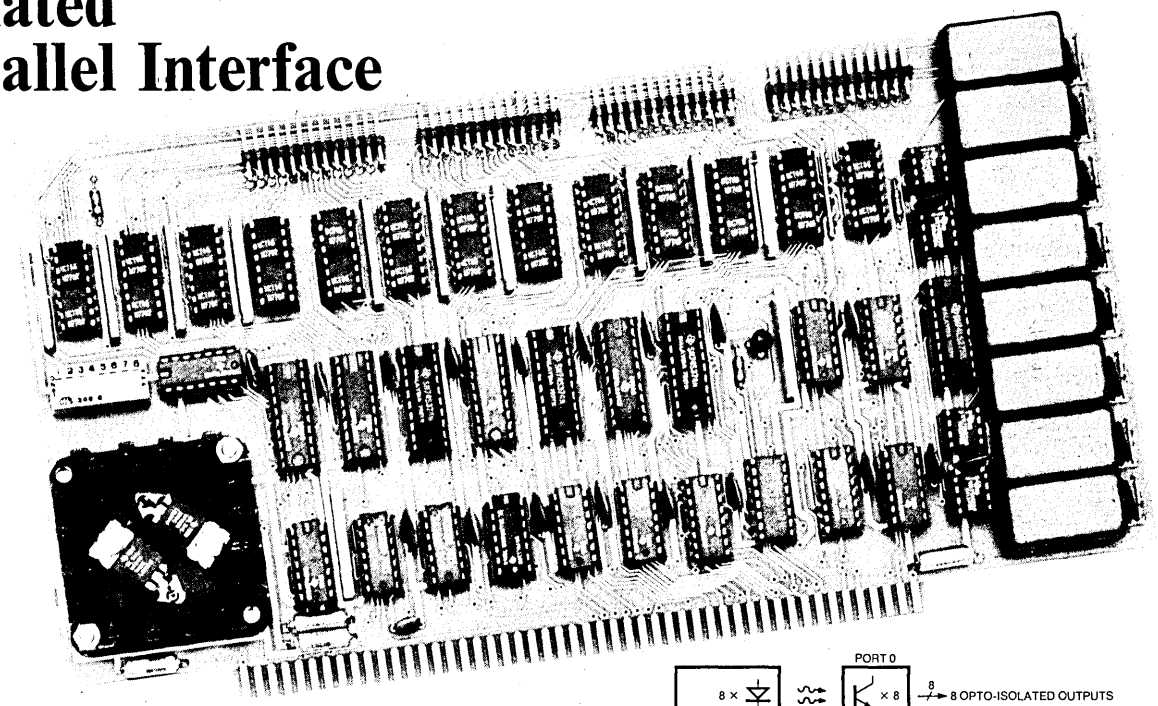
4 Port I/O Isolated Parallel Interface



- Complete electrical isolation
- Eliminates ground loop problems

Now your interfacing can be achieved with complete electrical isolation from your microcomputer.

Electrical isolation means that problems with ground noise and ground loops can be completely eliminated in your instrumentation, communications, or process control systems.

Electrical isolation also means that potentially damaging transients can be safely isolated from your computer system.

The new Cromemco 4PIO parallel interface card includes:

24 opto-isolated input channels
16 opto-isolated output channels
8 relay-isolated output channels
11 opto-isolated strobe/handshake lines
1 opto-isolated reset line

The 4PIO services these isolated I/O channels through four parallel, 8-bit I/O ports. The addresses of these I/O ports are switch selectable (in blocks of four) by means of a switch located conveniently on the 4PIO interface card.

ISOLATED CONNECTOR PINS

The isolated I/O channels of the 4PIO are brought to four connectors on the top edge of the card. NO PIN ON ANY OF THESE CONNECTORS IS DIRECTLY CONNECTED TO THE COMPUTER CIRCUITRY. Every active pin is electrically isolated either by means of an opto-isolator or relay.

TECHNICAL SPECIFICATIONS
Model 4PIO Isolated Parallel Interface

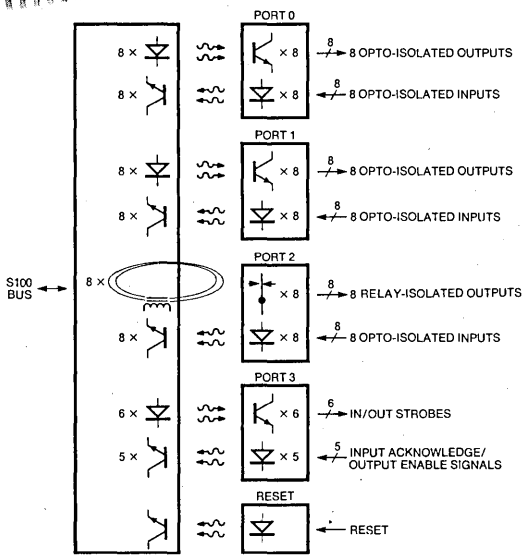
Parallel I/O ports:
- Number of bidirectional ports: 4
- I/O port width: 8 bits wide.
- Number of opto-isolated input ports: 3
- Number of opto-isolated output ports: 2
- Number of relay-isolated output ports: 1

I/O strobe signals and reset:
- Number of I/O strobe bits: 11
- Strobe signal isolation: opto-isolated
- Reset line: opto-isolated

Opto-isolated I/O:
- Number of opto-isolators: 52
- Opto-isolator type: MCT66
- Signal levels: TTL

Relay outputs:
- Number of relay outputs: 8
- Contact type: SPDT
- Contact voltage: 28 V AC or DC
- Contact current: 1 A

General information:
- BUS: S-100
- Power requirements: +8 volts @ 2.3 A
- Operating environment: 0-55°C



Cromemco 4PIO interface. Note that all lines are either optically or magnetically isolated from the computer circuitry.

Cables are available in two convenient lengths to couple from these top connectors to a standard DB-25S socket. Cable model CBL-2 is 62 cm in length and can be used in our Z-2 computer. Cable model CBL-3 is 110 cm in length for use in our System Three computer.

Like all Cromemco cards, the 4PIO is designed to meet the most demanding standards of industrial performance.

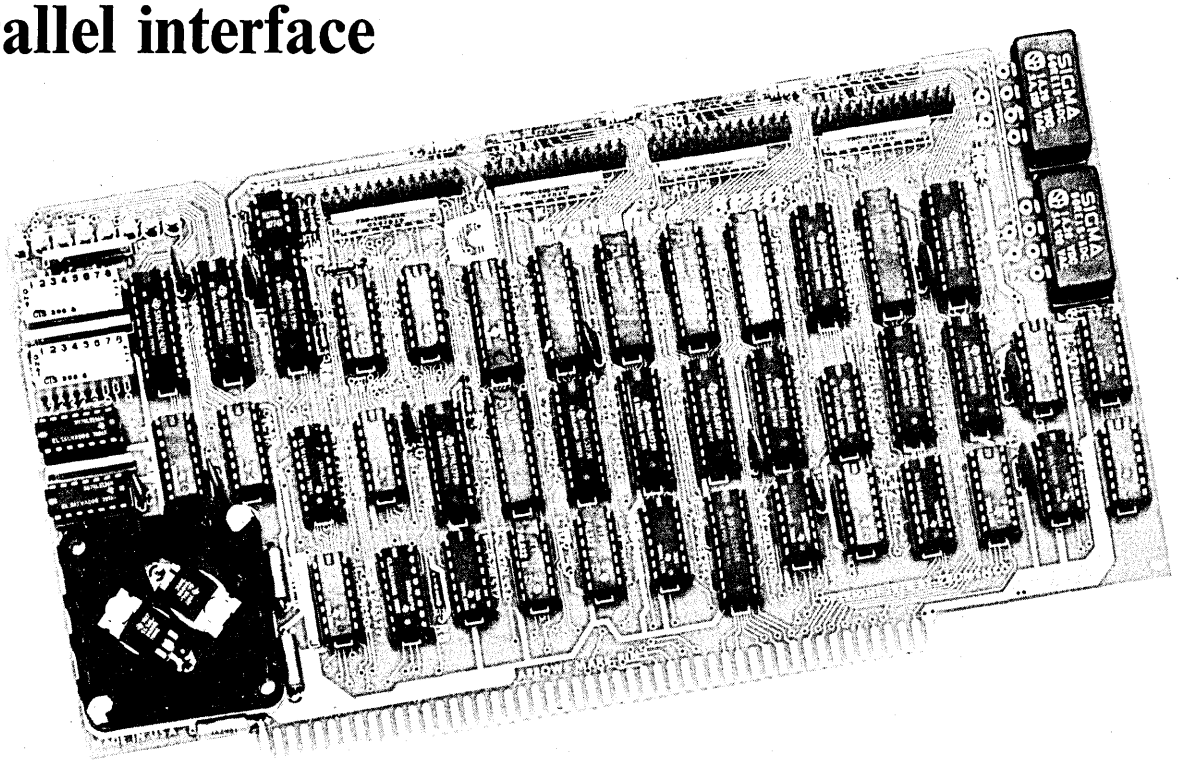
8 Port I/O Multi-channel microcomputer parallel interface



SIMPLIFIED PARALLEL INTERFACING

Parallel interfacing was never easier than with the Cromemco 8PI/O Parallel Interface Card.

You get 8 bidirectional 8-bit I/O ports that can be used either singly or coupled together to form longer word lengths.

For convenience, input and output status flags for handshake purposes are grouped together on one port and may be accessed with one input or output statement.

Strobe pulses can be issued after each 8-bit transfer or may be delayed until the proper word length has been formed.

Other features include 8 sense switches and 8 LEDs on the highest selected I/O port on the card, and 2 bits of opto-isolated input and 2 bits of relay-driven output.

The 8 I/O ports may be located on any 8-port I/O boundary.

MODEL	
8PI/O assembled	Model 8PIO

TECHNICAL SPECIFICATIONS
Model 8PI/O
8-Channel Parallel Interface

Parallel I/O Ports:
- **Number of bidirectional ports:** 8
- **I/O port width:** 8 bits wide.
- **Input load:** 4 TTL loads.
- **Output drive:** 4 TTL loads.

Input strobes: latched.

Output strobes:
- **Delay:** 1 μsec after new data valid.
- **Width:** 1.5 μsec; negative true.
  1 strobe pulse per port.

Opto-Isolator input:
- **Number of Opto inputs:** 2 bits, TTL level inputs.

Relay Outputs:
- **Number of relay outputs:** 2 bits.
- **Contact voltage:** 28 V AC or DC.
- **Contact current:** 1 amp.
- **Contact type:** SPDT.

General information:
- **BUS:** S-100.
- **Power requirements:** +8 volts @ 1.5 A
- **Operating environment:** 0-55°C.

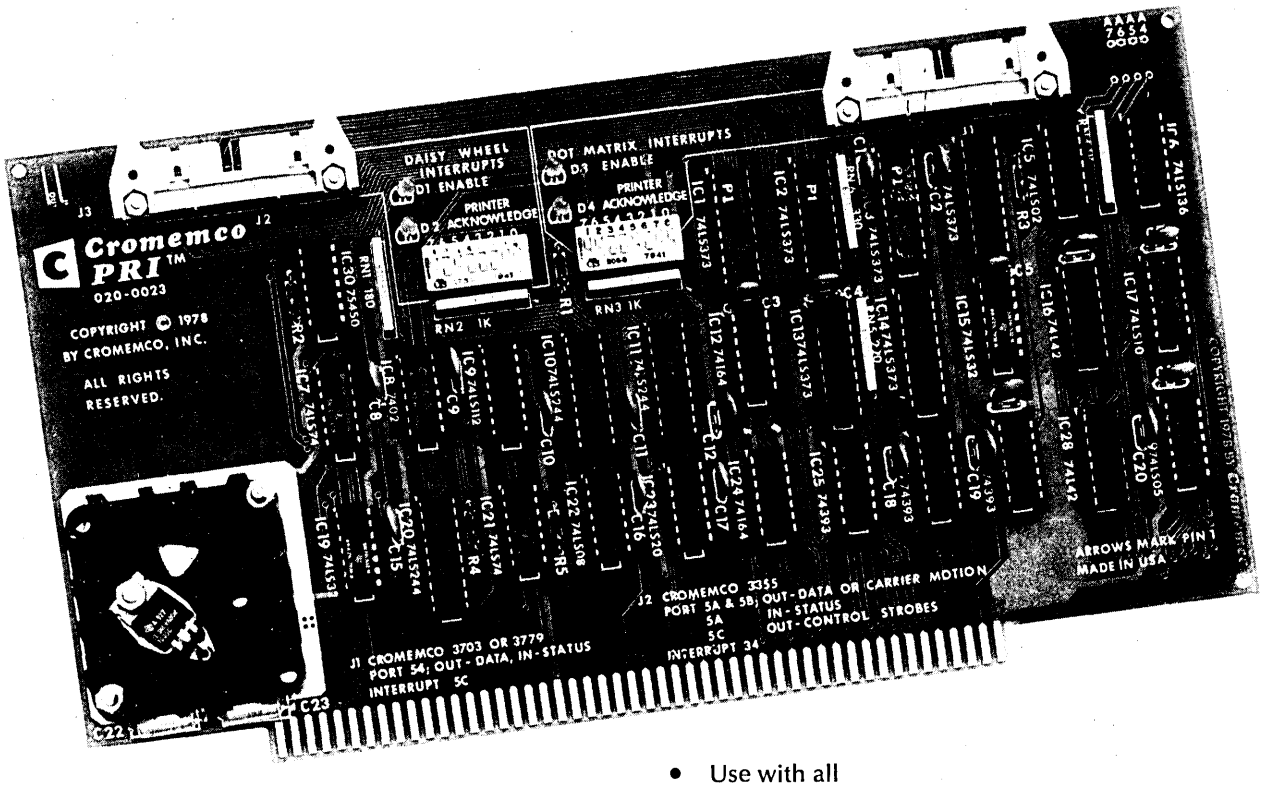
Printer Interface



- Use with all Cromemco printers

A VERSATILE CARD WITH TWO INTERFACES ON ONE CARD

With this new interface card, it's easy for you to interface either dot-matrix or full letter printers to your computer system.

To be suited to these printers, this card is designed with two actual interfaces. One uses the "Centronix parallel" convention and interfaces the Cromemco Models 3715 or 3703 dot-matrix printers.

The card's second interface interfaces the Cromemco Model 3355B Full-Letter printer.

This second interface has built-in ribbon-lift and ribbon-lowering circuitry to free the software overhead normally required for this function.

NOTE TO CROMEMCO SYSTEM TWO AND SYSTEM THREE PURCHASERS:

The Model PRI interface card described here is now supplied as standard equipment in your system.

You need not purchase this card separately unless you are adding additional printers to your system.

Each of the two interfaces has an individual cable connection on the top edge of the card.

The Cromemco PRI card now also includes full interrupt capability for use in multi-user systems.

MODELS

Printer Interface Card assembled, burned-in and tested ..... Model PRI
Cables for PRI interface: 25-conductor ribbon cable connects from top card connector to DB-25S socket. Lengths as follows:
Cable 62 cm in length for use in Cromemco System Two computers ..... Model CBL-2
Cable 110 cm in length for use in Cromemco System Three computer ..... Model CBL-3

TECHNICAL SPECIFICATIONS

Model PRI
Printer Interface

Output port addresses: 54, 5A, 5B, 5C
Input port addresses: 54, 5A
Alternate port addresses: Optional DIP switch
Software support: Cromemco CDOS
BUS: S-100
Power requirements: +8 volts @ 1.0A
Operating environment: 0-55°C

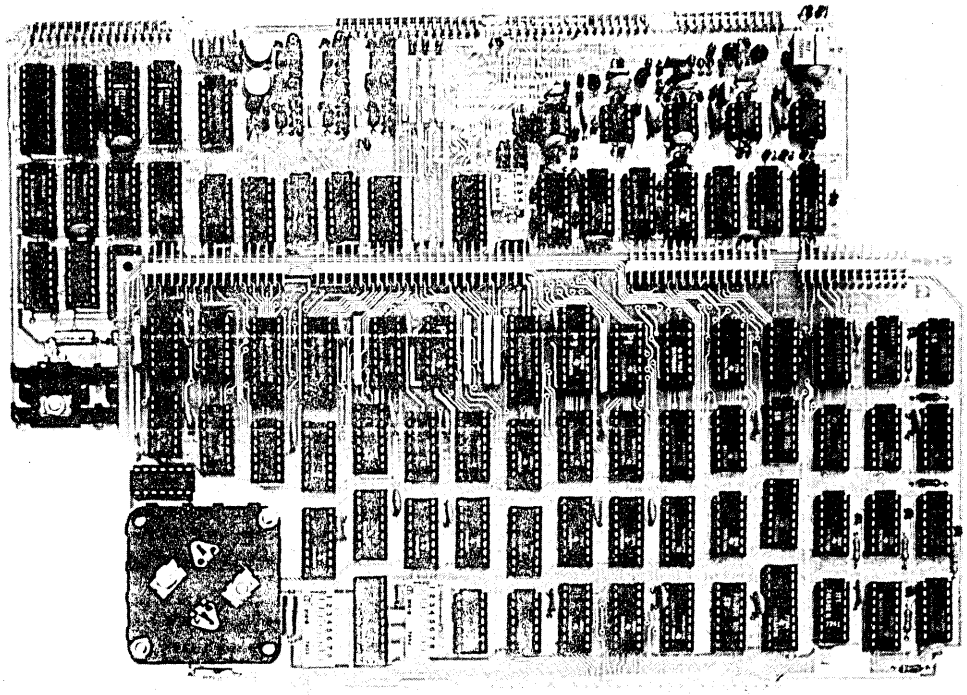
Model SDI
Color Graphics Interface

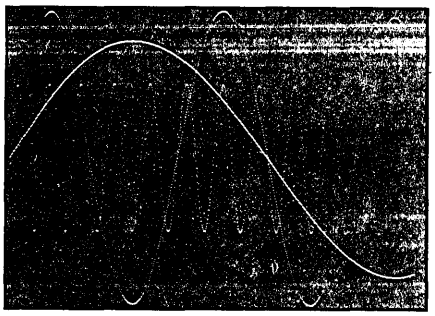


Here's a graphics interface that gives you high resolution, simplicity and an enormous range of color choices unmatched in the industry.

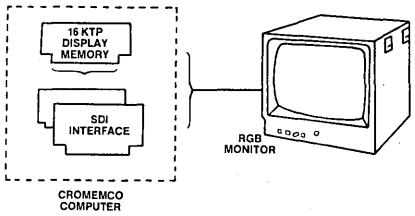
The new Cromemco Model SDI Color Graphics interface is a fully-integrated way to display the memory content of Cromemco computer systems in beautiful and meaningful color choices. Use of color and the high resolution of the image facilitate reading the display by researchers in the field. To simplify examination or discussion, various parts of the scan can be displayed in any of a wide range of colors — 4096 to be specific.

The interface consists of two circuit cards that plug directly into any Cromemco computer. No alteration of the computer is required. All necessary outputs to the monitor are provided by the interface.

The display device is typically an RGB Monitor, used in the industry or available from Cromemco (Model RGB-13).



Very high resolution provided by the new color graphics interface is apparent in this plot of sinusoids.



HIGH RESOLUTION

The new SDI interface can be used to display images with up to 754 x 482-point resolution. As discussed later, this resolution is at least the equal of a high-quality broadcast-TV picture.

COLOR OR B/W

The new interface can be used to display an image in either color or black-and-white — or in both simultaneously.

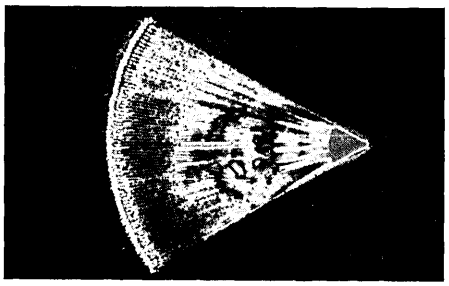
In color any 16 colors from a palette of 4096 colors can be used in the picture. In black-and-white any 16 shades of gray can be used.

HOW THE SDI MAPS

The SDI uses direct memory access to display the content of a display memory. Each pixel of the display may be mapped either from one nybble (4 bits) or one bit of the display memory. The mapping mode (nybble or bit) is software-selectable — in fact, part of a picture may be displayed in one mode and part in the other.

The display memory may consist of either a 12K or 48K memory.

© IC MASTER 1983



Display of cross section of human heart imaged by a 2.25 MHz ultrasonic sector scan through body's intracostal space. The image is displayed using the new SDI interface on an RGB Monitor. This medical application involving the new interface was done at Stanford University.

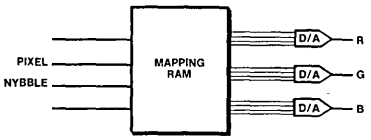
The combination of mapping modes and memory result in four basic modes of operation as shown below.

MODEL SDI RESOLUTION (HORIZONTAL x VERTICAL) IN EACH OF FOUR MODES OF OPERATION.

	Display Memory Size	
	12K	**48K**
Nybble-Mapped	189x121	378x242
Bit-Mapped	377x241	754x482

SDI OUTPUTS

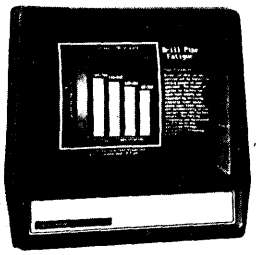
The Model SDI provides three separate analog output signals to drive the Red, Green, and Blue guns of a high-quality RGB monitor. The three separate outputs, rather than one composite output, are used to preserve the full resolution of the picture.



In nybble mapped operations each 4-bit nybble can select one of 4096 colors as determined by a mapping RAM. The contents of the mapping RAM can be changed dynamically, under software control, by issuing OUTPUT instructions to the SDI.

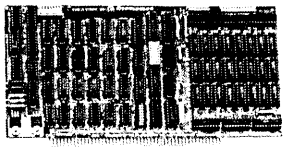
TV COMPATIBILITY

The Model SDI also provides all signals required to serve as input to a colorizer or color modulator in a TV broadcast studio.



RGB MONITOR

New Cromemco RGB (red/green/blue) Color Monitor is specially adapted for use with SDI Interface. Photos shown herein are from this monitor.



48K DISPLAY MEMORY

A new 48K two-port memory card has been developed for use with the SDI. Picture information is accessible by the SDI through a connector on the top of the memory cards. The cards plug directly into the Cromemco computer.

The computer resident memory may also be used as the display memory, although at the expense of mapping speed. This reduction occurs because the CPU must suspend operation when the SDI accesses the resident memory. The result is approximately 55% CPU utilization for a 12K-memory picture and 6% utilization for a 48K-memory picture.

Use of the special two-port memory, however, assures 75% to 100% CPU utilization, depending on the application software.

DESIGNED TO SURPASS TV QUALITY FOR LONG-TERM APPLICATION

In its high-resolution mode, the SDI* displays a picture having a 754 x 482-pixel resolution. This format corresponds to and is compatible with NTSC TV systems practice in that 482 lines are normally displayed in a nominal 525-line system. The 754 points in the horizontal direction give a resolution equal or better than that of the vertical direction.

The horizontal resolution itself far exceeds that of conventional TV displays which have relatively limited bandwidth.

The result of the above approach is that the high-resolution picture displayed using the SDI interface is at least equal in resolution to a 525-line color TV picture.

*U.S. Patent No. 4121283

TECHNICAL SPECIFICATIONS

Model SDI
Color Graphics Interface

Mapping modes: Bit or nybble; software selected.
Resolution: 754 x 482 pixels maximum using 48K display memory. 12K display memory may also be used at lower resolution; see text.
Color: Any 16 of 4096 colors or any 16 shades of gray may be displayed.
Outputs: Three analog outputs for R.G.B. monitor.
Recommended Display Memory: Cromemco **48** KTP two-port memory.
Sync signal: Composite Sync signal is switch-selectable. Separate RS-170 Sync signal available.
System Bus: Industry Standard S-100.
Operating Environment: 0-55°C.

Model RGB-13 Color Monitor

Max. effective screen size: 255 mm x 190 mm
Technology: All solid state except for CRT.
CRT: 13" shadow mask, delta gun
Video signal input: RGB 0.3 - 2.0 v., 75 ohm. Fully compatible with Cromemco model SDI interface outputs.
Video amplifier bandwidth: 50 Hz to 15 MHz ± 3db
Power requirements: 120 or 220 volts, 50/60 Hz.
Power consumption: 250 VA
Dimensions: 18" x 15¼" x 14¾"
Weight: 23 Kg
Operating Environment: -5° to 40°C

Model 48 KTP
Two-Port Memory
Memory Capacity: 48K bytes
Bus: Industry Standard S-100
Operating Environment: 0-55°C

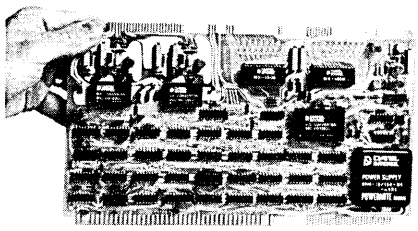
SineTrac™

MICROCOMPUTER A/D-D/A BOARDS

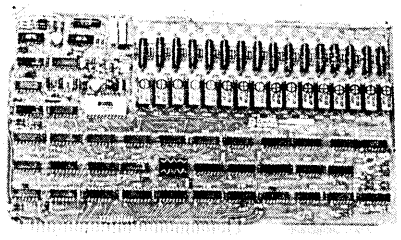
FOR iSBC®-80 MULTIBUS®



iSBC-711/732 PIN-FOR-PIN

- Operates from Intel RMX-80 Software
- ST-711: 32S/16D A/D, no D/A
- ST-732: Same as ST-711 plus 2 4-20 mA D/A loops
- 12 bits binary, 20 μS A/D conversion
- Crystal Pacer interrupt clock, differential PGA

ST-711
ST-732

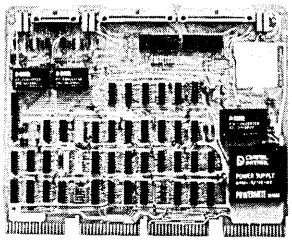


ISOLATED LOW-LEVEL A/D

- 8 or 16 differential A/D channels
- 126 dB CMR, ±250V Isolation
- 10 mV to 2V PGA ranges
- Crystal Pacer Interrupt Start Clock
- Operates from Intel RMX-80 Software

ST-711RLY8D
ST-711RLY16D

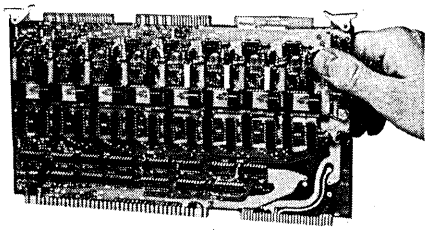
FOR LSI®-11, 11/2 AND PDP®-11/23



HALF AND FULL QUAD A/D-D/A

- ST-LSI: 32S/16D A/D, 2 D/A loops, Full Quad
- ST-LSI2: 16S/8D A/D, Half Quad
- 12 binary bits, 20 μsec A/D
- Pacer Vector Interrupt Start Clock
- X1 to X1K Differential PGA

ST-LSI
ST-LSI2

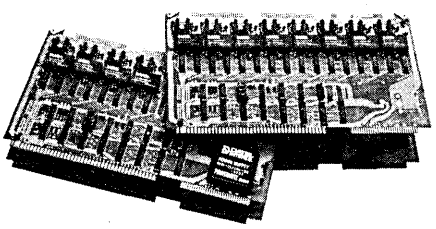


INDUSTRIAL D/A BOARD

- 4 or 8 D/A channels with choice of supplied 4-20 mA loops or voltage output ranges, selectable per channel.
- Directly replaces iSBC-724, 8 or 16 bit bus width, 16 or 20 bit addressing.
- Operates from Intel RMX-80 software.
- Floppy disk Diagnostic and program listing available.
- 12 bit resolution, 0.05% accuracy.

ST-728

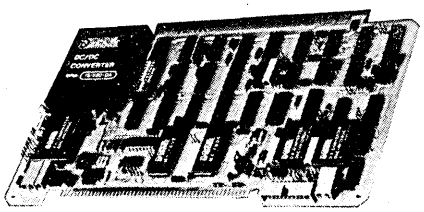
FOR MULTIBUS® iSBC-80 MICROCOMPUTERS



MULTIBUS AND iSBC COMPATIBILITY

- 4 or 8 D/A channels
- Compatible with both 8 and 16 bit CPU's
- 20 bit addressing
- 16 bit resolution, 0.005 accuracy

ST-716



INDUSTRIAL PGA A/D-D/A BOARD

- 32S/16D A/D plus 2 D/A 4-20 mA loops.
- Software-programmed Pacer or event-triggered interrupt/ start clock.
- Software-programmed X1 to X8 or X1 to X1024 instrumentation amplifier.
- Includes diagnostic program manual.

ST-6832

Systems Manuals and Diagnostic Programs are included with all models.

iSBC-80, MULTIBUS and RMX-80 are INTEL Corp. trademarks. LSI and PDP are Digital Equipment Corp. trademarks. Micromodule and EXORciser are Motorola Corp. trademarks.

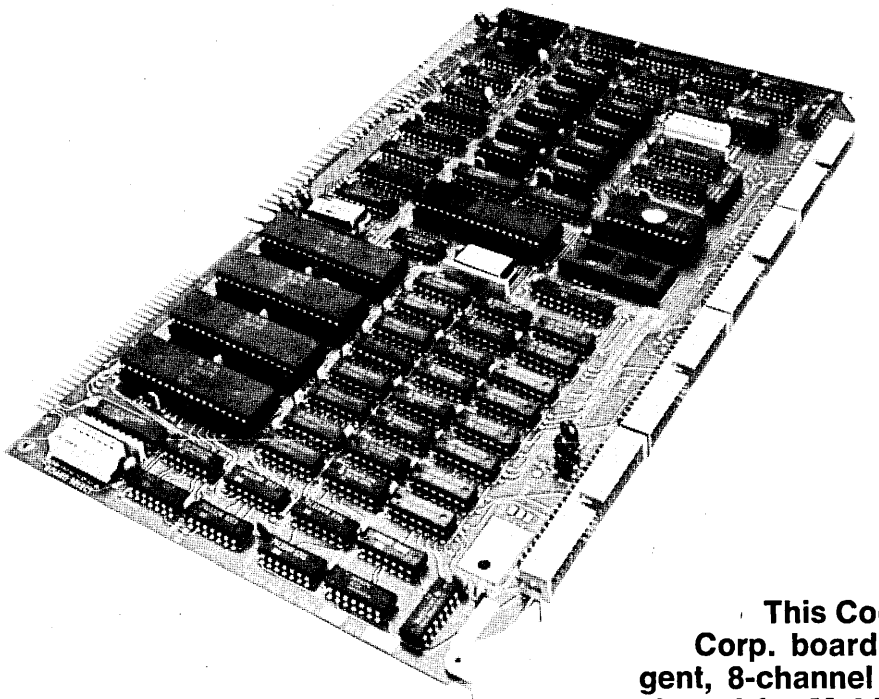
For Key Data On Every IC On This Board, The Place To Look Is...



This Codata Systems Corp. board is an intelligent, 8-channel serial input/output board for Multibus systems.

Equipment and system design often require the use of a wide variety of integrated circuits in order to obtain optimum performance. One way for an engineer to be certain that he hasn't overlooked the best device for his application is to refer to the pages of IC MASTER.

Surveys conducted by IC MASTER, integrated circuit manufacturers, and independent research agencies confirm that four out of five IC MASTER users have specified one or more products as the result of using IC MASTER.

Device No.	Description
AM25LS2521	8-Bit, Equal-to Comparator
AM26LS29	Line Driver, Single-Ended
AM26LS32	Line Receiver, Differential
74LS02	Quad 2-Input NOR Gate
74LS08	Quad 2-Input AND Gate
74LS32	Quad 2-Input OR Gate
74LS74	Dual D-Type Positive Edge Triggered Flip-Flop with Preset and Clear
74LS138	3 Line to 8 Line Decoder/Demultiplexer
74LS164	8-Bit Gated Serial-In, Parallel-Out Shift Register
74LS244	Octal Bus Driver (Schmitt trigger) Non-Inverting, 3-State, Complementary Control
74LS273	Octal D-Type Edge-Triggered Flip-Flop
MBM2716	Fujitsu 248 by 8 PROM
SN74LS04	Hex Inverter
SN74LS133	13-Input NAND Gate
SN74S240	Octal Buffer/Line Driver/Line Receiver Inverted 3-State Outputs
Z80A	Zilog 8-Bit Microprocessor
Z8530	Zilog Serial Communications Controller

Representative list of ICs on Codata Systems Corp. board for data communications equipment.

VMEmodules

VMEmodules from Motorola incorporate the high performance MC68000, the internationally accepted Eurocard format, the defacto industry standard 16-bit VMEbus, and the new and flexible I/O Channel, all combined in the most versatile and latest state-of-the-art approach to the modular systems concept.

The MC68000 MPU

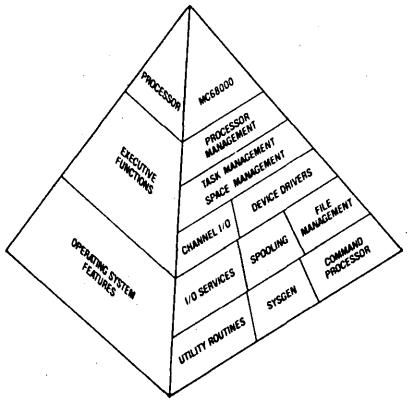
You've seen the benchmarks, and the results — MC68000 has emerged as the acknowledged microprocessor leader in the 16/32 bit performance class. Its architecture is designed for optimal support of the latest high-level languages, and it directly addresses 16 Megabytes of memory (instead of one Megabyte for most of the competition). Its 32-bit internal features mean easy growth to full 32-bit capability as your needs grow into the future. VMEmodule products put the MC68000 MPU to work in a modular structure that has achieved worldwide acceptance and support, both by users and manufacturers of microcomputer subsystems.

Worldwide Standard Package: Eurocard

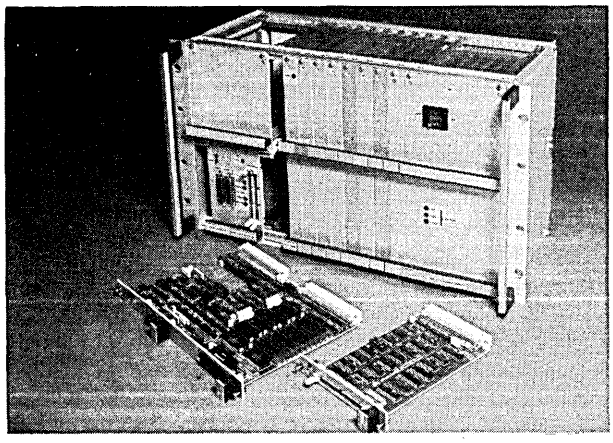
Developed as a de facto standard in Europe, the Eurocard mechanical format is rapidly gaining worldwide acceptance of modular applications in a broad range of laboratory and industrial automation environments. And for good reason — the Single and Double Eurocard circuit boards and card cages in the VMEmodule product line offer a convenient size, plus pin-and-socket bus connectors to give you an extra margin of confidence of reliability in the more severe application environments.

Multiprocessing 16/32 Bit VME Bus

The VME bus doesn't lock you into today's technology. It has the inherent power and capabilities to adapt to any number or types of popular processors for true multiprocessing applications; and, you can use as many bus masters as you need.



BASIC-M, I/Omodule, RMS68K, VMEbus, VERSAbug, VERSAdos, VERSAmodule and VMEmodule are trademarks of Motorola Inc.



With the VME bus, you can mix 8, 16, and 32-bit processors in the VME backplane. It operates asynchronously at high speed, and provides 7 interrupt plus 4 bus arbitration priority levels to allow total flexibility.

I/O Channel Expands Capabilities

The VMEmodule system architecture supports the I/O Channel feature described elsewhere in this publication. Briefly, the I/O Channel is a buffered extension of the on-board processor bus, allowing the system to be easily custom-tailored with the addition of input/output functions in small modular amounts both within and external to the VME card cage. The I/O Channel promotes efficient system utilization by allowing I/O transfers to proceed at rates up to 2 megabytes per second, independently of other on-going activity in the higher-speed VMEbus system interconnect.

Powered by High Performance Software

VMEmodule products are designed for demanding lab and industrial automation environments where quick, accurate response to multiple random events is essential — and Motorola's RMS68K Real-Time Multitasking Executive software for the VMEmodule Monoboard Microcomputer provides the nucleus around which complete real-time applications can be built. For those applications where large data files and mass storage resources must be handled efficiently, there's the full-featured VERSAdos Operating System. Standard device drivers are provided with both VERSAdos and RMS68K for interfaces and devices supplied by Motorola, and both systems make provisions for easy addition of user-supplied device drivers. Both the RMS68K Executive and the full VERSAdos System are rapidly emerging as the standard real-time system structure for MC68000-based applications.

To provide diversified programming capabilities for VMEmodule-based projects, Motorola supplies not only an advanced Structured Macro Assembler, but also efficient Pascal and FORTRAN Compilers.

© IC MASTER 1983

VMEmodules

And to offer streamlined debugging capabilities, the VMEbug Debug Monitor firmware is available either in ROM or on disk for use with the VMEmodule Monoboard Microcomputer.

Modular Subsystems elevate the starting point for microcomputer system design from the "components" level to the board level. And, just as there are variations in microprocessors for different end-use requirements, there are families of modular subsystems to best serve these varying demands. Thus, the VMEmodule family joins the existing Motorola Micromodule 8-bit family and the VERSAmodule 16-bit family of modular microsystem products to let the user tailor his system to his specific needs.

VMEmodules provide a degree of performance and flexibility that bridges the gap between the lower-level 8-bit processing tasks (the Micromodule domain) and the highend computation and memory-intensive challenges that are the domain of the physically larger and more complex 16/32-bit VERSAmodules. This spectrum of microsystem products offers the most cost effective solution to complex systems — perhaps distributed control systems — with the right performance elements at each processing node of the system.

The Intangible Extras —

When you select Motorola microsystem products for your system design, you get not just the hardware and software, but a host of built-in benefits of almost equal importance. Among these:

- A field-proven line of thoroughly tested products that assure highly reliable system operation.
- A time-tested set of support tools and documentation that simplify system design and operation.
- A nationwide field-sales and service network that offers design and applications support before, during and after the sale.

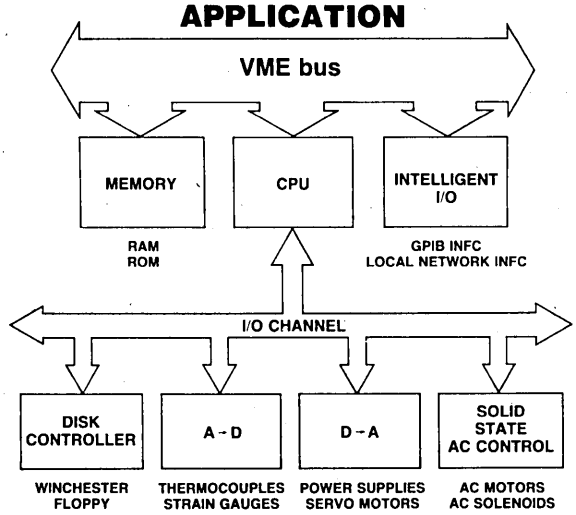
A mature training program at various levels that offers group training at specified locations as well as in the customer's own establishment.

A product line that continues to expand to take full advantage of new developments for increasing capabilities, improving performance and allowing more efficient operation.

Multiple Sources of VME Compatible Products — Worldwide

Development of the VME bus structure represents the combined technical efforts of Motorola and a number of other major international electronics companies. The initial announcement in Europe met with very positive reactions from potential users and vendors the world over, with the result that the original participants are being joined by increasig numbers of companies planning to supply such products. These sources are united through the activities of the VME Bus Manufacturers Group, which meets four times a year in technical forum to help assure the user community of a high degree of technical compatibility between products, and to make available to the public a comprehensive list of suppliers.

TYPICAL VMEmodule APPLICATION



VMEmodule Line*

VMEmodules — VMEbus compatible, Double Eurocard Format.
MVME110 — MC68000 Monoboard Microcomputer with I/O Channel support for extended I/O functions.
MVME200/201 — 64K byte and 256K byte Dynamic RAM Modules with data parity check.
MVME210 — Static RAM/ROM Board providing up to 128K bytes storage capacity.
MVME300/301 — GPIB Controller meeting full IEEE 488-1978 standard.
MVME930 — VMEbus Extender Board
MVME931 — VMEbus Wirewrap Board

*See also the list of I/O modules on another page in this catalog for additional I/O functional elements supporting the VMEmodule line.

Software

MVMEBUG — Debugging Packages for VMEmodule Monoboard Microcomputer with single-line Assembler/Disassembler.
M68KORMS68K — M68000 Real-Time Multitasking Executive provides task scheduling and synchronization for any number of tasks.
M68KOVDOS — OEM VERSAdos Operating System is a real-time multitasking MC68000 based system oriented to hard disk operation.

Packaging

VMEmodule and I/Omodule Card Cages, Chassis, Power Supplies and Backplanes.

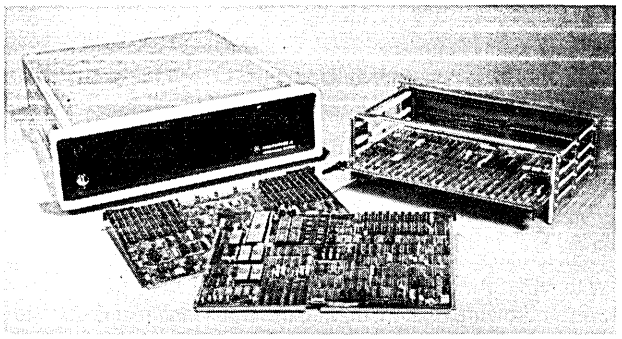
VERSAmodules



VERSAmodule circuit boards are microcomputer building blocks from Motorola, based on the state-of-the-art 16-bit MC68000 Microprocessor. They are part of a family of modular building block products that provide the system designer ready-to-run hardware and software. VERSAmodule building blocks drastically reduce the total cost of bringing together a fully configured custom microcomputer-based system . . . by saving development time, engineering talent, and money as well.

With VERSAmodule products, you minimize the risks of design limitations and system obsolescence while keeping your system tied to the leading edge of technology. Your system is built around the most advanced 16-bit microcomputer available today . . . incorporating sophisticated architectural features to enhance system performance. The full range of available software products and applications development tools assure early system completion. And Motorola's experienced support staff is available to help, any time.

Use Today's Most Advanced 16-Bit Microcomputers

The VERSAmodule Monoboard Microcomputers (VM01A and VM02) are the most powerful and versatile 16-bit single-board microcomputers available. They achieve a higher degree of computing power, memory capacity and tailorability by combining the MC68000 MPU with other on-board features. Such on-board features as I/O Channel interface, VERSAbus interface, bus arbitration logic, dual port RAM, multiprotocol serial I/O, parallel I/O, programmable timer/counters, and RAM with battery back-up capability enable these VERSAmodule Monoboards to handle applications ranging from those using a single processor through those requiring complex multiprocessing structures.

VERSAbus Architecture Enhances System Performance

VERSAmodule boards are interconnected in a system using the VERSAbus interconnect standard. The high-speed VERSAbus interconnect is characterized by asynchronous operation supporting direct memory addressing and true multiprocessor operation. Unlike other popular bus structures, VERSAbus architecture does not limit the number or types of processors that can be used in multiprocessing applications. The number of "bus masters" or main processor boards is limited only by the number of card slots in the particular VERSAbus backplane being used. Furthermore, several lines within the VERSAbus structure enhance system reliability and integrity by providing for efficient self-diagnosis . . . resulting in minimum system downtime.

BASIC-M, I/Omodule, RMS68K, EXORmacs, EXORbus, VERSAmodule, VERSAbus, VERSAdos, and VERSAbug are trademarks of Motorola, Inc.

Cost-Effective I/O Channel Increases System Flexibility

The I/O Channel is an advanced architectural feature of VERSAmodule Systems that allows greater system flexibility and low incremental cost for I/O expansion. The I/O Channel has a 12-bit address bus, 8-bit bidirectional data bus, 4K Bytes of memory-mapped I/O, and a data transfer rate of up to 2 Megabytes per second.

VERSAdos Real-Time Disk Operating System

The VERSAdos Operating System Software employs modular design of its major programs to allow easy addition of user functions with minimal cost. It contains a file management package and additional device-independent I/O support. The VERSAdos System is available with software drivers for both floppy and hard disk storage, and incorporates redundant safeguards against system failures. Optimum processor and memory utilization are achieved through true multitasking and dynamic memory allocation/deallocation.

RMS68K Real-Time Multitasking Executive

For real-time applications that do not require auxiliary mass storage (disk), and efficient Real-Time Executive may provide all the required systems functions.

The RMS68K Real-Time Multitasking Executive provides the nucleus around which real-time applications can be built. It allows a wide variety of application systems without large expenditures for complex real-time and multitask control functions. RMS68K is ROMable, meaning that the executable code for your entire system could be placed in ROM. In addition, the RMS68K System customizes your system by allowing you to add your own device drivers and select only those functions that you need. Compatibility with VERSAdos and debug software packages helps reduce the cost of software maintenance over the life of your system.

VERSAbug Debugging Packages

The VERSAbug debug package provides a powerful evaluation and debugging tool for VERSAmodule Systems. It permits full-speed execution of system and user-developed programs operated in a VERSAmodule Monoboard Microcomputer environment under complete operator control.

VERSAbug software is available as a system debug monitor, in a pre-configured EPROM resident package, or as source and relocatable object modules, packaged on diskette or cartridge disk, allowing you to easily create your own application-specific version in a matter of hours. In either package, VERSAbug software gives you a powerful tool for reducing system development and continuing maintenance costs.

© IC MASTER 1983

VERSAmodules

Complete Your System . . . On Schedule

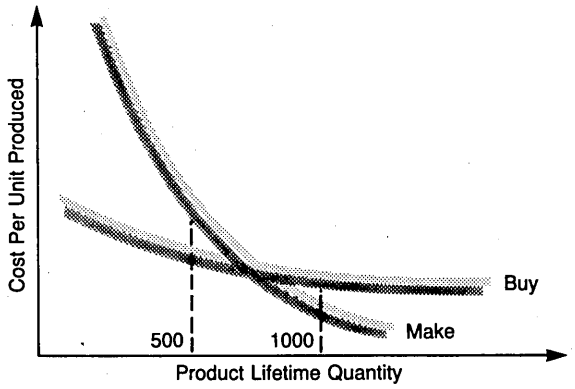
With VERSAmodule products, the lion's share of your system's hardware design, debug, assembly and test is done for you. The mature operating system software is already developed and debugged, too. You can begin developing your applications software immediately, in order to respond faster to customer requirements, penetrate fast moving market windows, or automate a critical activity sooner. The result . . . higher profitability.

Use Your Resources Efficiently

Since your costly and often limited technical resources are not needed to design or debug the basic computer system hardware, you can concentrate on the value-added areas of applications software and any unique hardware requirements. In other words, you apply your scarce resources to the area you know best . . . your application.

Lower Your Non-Recurring Costs

The rising costs to design, develop and debug basic system hardware are reduced by using VERSAmodule products. But the cost savings don't stop here. The powerful applications development tools supporting the VERSAmodule family greatly facilitate the development and debugging of your applications software and any specialized hardware. This allows you to get it right the first time . . . avoiding costly redesigns and project delays.



VERSAmodule CIRCUIT BOARDS

Monoboard Microcomputers

VM01A Monoboard Microcomputer — MC68000 MPU, 32/64K Byte RAM, Sockets for 64K Byte ROM, 4 parallel I/O ports, 2 serial I/O ports.

VM02 Monoboard Microcomputer — MC68000 MPU, 128K Byte dual-port RAM, Sockets for 64K Byte ROM, 2 Multiprotocol serial I/O ports. I/O Channel Interface.

Memory Modules

VM10 Random Access Memory — 64/128K Byte Dynamic RAM, Byte Parity, 16-bit data/word length.

VM11 Random Access Memory — 256/512K Byte Dynamic RAM, Error detection and correction, 16/32-bit data word length.

VM80 Combination ROM/RAM/I-O — 0/128K Byte Dynamic RAM, Sockets for 256K Byte ROM, 6 parallel I/O ports, 2 Multiprotocol serial I/O ports.

Controllers

VM40 Color Graphic Controller — 512 x 384 pixel, Graphics primitives, 8 basic/400 shading colors, I/O Channel Interface.

VM20 Floppy Disk Controller — Up to 4 floppy disks, 2M Byte formatted floppy capacity, On-board IPC with data buffer.

VM60 Universal Intelligent Peripheral Controller — 4K Bytes on-board RAM, Up to 32K Bytes ROM, DMA data transfers, Wire wrap area for custom user interface.

VM21 Universal Disk Controller — Up to 4 floppy disks, Up to 2 SMD compatible hard disks, Up to 516 M Byte formatted disk capacity, On-board IPC with data buffer.

VM30 Multi-Channel Communications Module — 4 RS-232C serial I/O ports, One parallel printer port, On-board IPC with data buffer.

VM31 Eight Channel Intelligent Communications Controller — 8 multi protocol RS-232 serial ports with MC68000 intelligence and 128KB RAM for down-loaded protocol and data buffering, ROM/EPROM initialization and self test.

Support

RSC1 Remote Serial Conversion Module — RS-232C to RS-449 or multidrop port, Synchronous or asychronous operation, Half or full duplex, Eurocard form factor.

System Packaging and Accessories — 5-¼ inch Chassis, Stand-Alone Card Cage, Power Supplies, Cabling Options, I/Omodule Card Cage, Mass Storage Enclosure, Industrial Card Cage System Package, VERSAbus Adapter Module.

Addition I/O

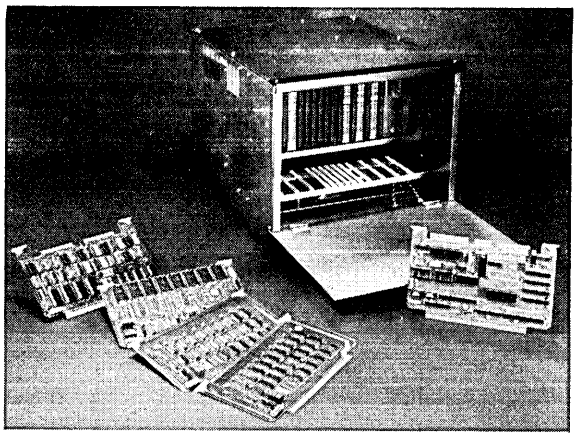
All of the I/Omodules described under I/Omodules in this catalog are compatible with the I/O Channel on VERSAmodule 02 and VM40, thus extending many additional I/O and control functions to the VERSAmodule product family.

FUTURE VERSAmodule PRODUCTS

Motorola currently offers more than 20 individual hardware and software products in the VERSAmodule and I/Omodule product lines. But beyond these, Motorola engineers are at work planning and designing future products to ensure continual expansion of the VERSAmodule product line. New hardware and software products will incorporate the latest technology in easy-to-use building-block form. Future family members will include higher-performance single board computers, higher-density memory modules, and new intelligent device controllers . . . all of which take advantage of advancements in LSI technology. I/Omodule products will expand the offering of popular industry interfaces and new software will bring advanced tools like applications-oriented languages and multiprocessor capability for the VERSAdos Operating System. Other announcements from Motorola, plus those from independent vendors offering VERSAbus-compatible products, will assure an even broader selection of useful products in the future.

© IC MASTER 1983

Micromodules



The Motorola line of Micromodules offers a selection of modular subsystems that permits a high degree of end-product customization. It is supplemented by a sophisticated library of development software with high-level language interface to simplify man-machine interaction. An array of packaging accessories provides the proper physical environment for the system assembly.

Utilizing Motorola's extensive family of 8-bit MPU-compatible chips, Micromodules are tailored to meet the performance objectives of most industrial automation and data acquisition applications. They are priced to compete favorably with in-house development and manufacturing costs and, in many instances, they represent the most cost-effective means for rapid, reliable system implementation (or even for prototyping chip-implemented systems.)

The Modular Building Blocks

The Micromodule Family is based on a selection of differently configured *single-board microcomputers.* These vary in capabilities and applications as a result of differences in on-board microprocessors, as well as memory and I/O content. For some requirements, a single monoboard microcomputer module, supplemented by a suitable enclosure, a power supply and your applications program, will adequately serve your total needs. For other more demanding applications, the Family offers a wide range of expansion modules which tailor the system to your ultimate requirements.

Software Support

To ease programming load and allow programmers to concentrate on the end product application, incorporate the **M6809 Real-time Multitasking System (RMS09)** as the executive kernal around which a real-time applications system can be built. RMS09 is a flexible collection of systems routines from which the user can customize or 'sysgen' supervisor routines and interrupt handling routines tailored as simple or as complex as the application system requires.

Also available for MC6809-based systems is SUPERbug, a high performance monitor which also provides the facility for linking relocatable modular software routines that can be independently written and executed from EPROM, ROM or RAM. For MC6800-based Micromodules, there is MICRObug Monitor, with system software and hardware debugging capability. Also available are Editor/Assembler and Basic Interpreter packages.

MONOBOARD MICROCOMPUTER SELECTION GUIDE

Part No.	Parallel I/O	Serial I/O			Memory		Options
		RS-232C	RS-422	20mA	ROM Capacity	RAM (Bytes)	
MC6800/MC6802 Based, 1 MHz Clock Rate							
M68MM01B	1 PIA 1 PTM				To 4K**		Low Cost, Self-contained Not Expandable
M68MM01	3 PIAs				To 4K**	1K	
M68MM01A2	2 PIAs	1 ACIA		*	To 8K**	1K	
M68MM01B1A	1 PIA 1 PTM	1 ACIA		*	To 4K**	384	Cassette I/O
M68MM01D	Printer Port 1 PTM	1 ACIA	(Opt) +	*	To 10K**		Use 2K RAMs in ROM Sockets
MC6809-Based; Clock Rate 1 MHz, except M68MM19A1-2MHz							
M68MM17	1 PIA 1 PTM	2 ACIA		*	To 64K**	To 64K**	Use RAMs in ROM Sockets
M68MM19-1 19A1	1 PIA 1 PTM	1 ACIA or SSDA	(Opt) +	*	To 32K**	2K	Replace ACIA With SSDA +

NOTES:
+ = Option requires minor board modifications
* = Option requires addition of Micromodule MM11 (RS-232C to 20-mA Current-Loop Adapter)
** = User supplied

D-A Converters—All inputs are TTL compatible.

Part No.	No. of Channels	Input	Analog Output Range		Comments
			Voltage	Current	
M68MM05C	4	12-Bit Binary	0-5, 0-10 ± 2.5, ± 5 ± 10		Output Voltage Range option is strap selectable.
M68MM15CV	1 to 4*	12-Bit Binary or two's complement	0-5, 0-10, ± 5, ± 10		Input Code and Output Voltage Range Options are strap selectable.
M68MM15CI	1 to 4*	12-Bit Binary or two's complement	0-5, 0-10, ± 5, ± 10	4 to 20mA	Voltage or Current output device with strap selectable current or voltage range options.

*Add suffix 1 through 4 to part number to denote number of channels required.

A-D Converters

Part No.	No. of Channels		Resolution	Input Voltage	Comments
	Diff.	S.E.	No. of Bits	(full scale, dc)	
High Level M68MM15A	8	16	12	0-5 Vdc, 0-10 Vdc, ± 5 Vdc, ± 10 Vdc,	V_{in} is strap selectable
M68MM15A1	16	32	12	same as above	
M68MM05A	8		12	± 10mV to ± 10V	
M68MM05B		16	12	same as above	
Low Level M68MM15B	1		15 plus sign	± 25 mV, ± 55 mV, ± 80 mV	Expandable to 16 channels with Expander Circuits
M68MM15BEX	1 to 4		Channel Expander for above

EXORbus-Compatible Memory Modules

	Capacity (K Bytes)	Features
RAM-Static, NMOS		
M68MM06	2	Clock Speed—1 MHz
MEX6808-22	8	
MEX6816-22S	16	With Parity, Clock speed = 1 or 2 MHz (with stretched Phase 2)
RAM-Static, CMOS		
M68MM09	4	Clock speed = 1.5 or 2 MHz (with stretched phase 2) On-board ckt. for user-installed parity.
M68MM21	8	Optional parity.
M68MM21-1	16	Optional parity.
RAM-Dynamic, with parity		
MEX6816-22D	16	Jumper selectable 1-, 1.5-,
MEX6832-22	32	or 2- MHz speed;
MEX6848-22	48	Row-addressable in 16K byte blocks.
MEX6864-22	64	
RAM-Dynamic; with hidden refresh; clock speed = 1 MHz; all with parity.		
MEX6816-1HR	16	
MEX6832-1HR	32	Organized into independently addressable rows of 16K bytes each.
MEX6848-1HR	48	
MEX6864-1HR	64	

Unpopulated Modules—User supplies chip set

	Number Of Sockets	EPROM/ROM CAPACITY (Memory Chip Number)	OPTION RAM CAPACITY (Memory Chip Number)
MEX68RR	20	16K (MCM68708/6830)	512 (MCM6810)
M68MM04	16	16K (MCM68708/6830)	0
M68MM04A	16	64K (1K, 2K or 4K capacity)	8K (1K or 2K capacity)

Serial-Format Digital I/O

ACIA Modules — MEX6850, 50-2

Offers both TTY and RS-232C data terminal interface, with eight switch-selectable baud rates between 110 and 9600 baud. MEX6850 operates at 1MHz and is configured with Modem output; 6850-2, at 2MHz, is configured with 20 mA TTY output.

Quad Serial I/O — M68MM07

Supplied with four MC6850 ACIAs, or with user supplied MC6852 SSDAs for either asynchronous or synchronous operation. Strap options permit RS-232C, RS-422, RS-423 or 20mA interface and baud-rate selection for each of the four ports.

RS-232C to TTY Adapter — M68MM11

Converts RS-232C output to 20 mA TTY operation.

8 Channel Serial I/O Module — M68MM18

Provides eight asynchronous RS-232C channels. Each channel is strap selectable to baud rates from 75 to 115K BPS. Memory location is strap selectable in a block of eight channels.

GPIB Modules

Provide interface between various MPUs and the IEEE STD 488-1978 interface bus. MM12A provides Listener/Talker functions for sending and receiving data bytes, requesting service and responding to parallel and serial polls. MM12 and 12-1 add the controller function that permits the system to send commands and conduct serial and parallel polls.

Listener/Talker for MC6800-type systems **M68MM12A**

Listener/Talker/Controller for MC6800-type systems **M68MM12**

Listener/Talker/Controller for MC6809-type systems **M68MM12-1**

Memory-I/O-Timer Expansion Module — M68MM16-1, 2, 3

Provides functional expansion of Monoboard MM01 (version 16-1), or MM19 (version 16-2), and can be used as MM19 Emulator in an EXORset Development System (version 16-3). Includes asynchronous serial data port with strap-selectable RS-232C, RS-422, or RS-423 interface, parallel interface port with 16 data lines and 2K of static RAM, four control lines, three 16-bit programmable counter/timers, and four sockets for user installed, single 5-volt-supply MOS or bipolar memories.

Parallel-Format Digital I/O

Universal PIA-Controlled I/O — MEX6820, 21-2

Contains two MC6820 Peripheral Interface Adapters (PIA's) for a total of four separate 8-bit I/O ports for peripheral interfacing.

32-In/32-Out Expansion Module — M68MM03

Contains 32 bits of parallel input and 32 bits of parallel output in four continguous 8-bit bytes. Used for simultaneous transfer of 4 bytes of informtion between an MPU and an external system to speed up the data transfer cycle.

16/32-Channel Relay Output — M68MM13A, B

Contains 16 (MM13A) or 32 (MM13B) on-board reed relay output channels to isolate the microcomputer from the system(s) being controlled.

24-Channel Optically Isolated Input Modules — M68MM13C, D

Provides three byte-oriented (8-bit) input channels that have high electrical isolation between microcomputer and equipment being monitored. Input voltages in excess of 17 volts are read as logical "1"; 4 volts or less represent logical "0." MM13D provides an on-board wetting source for applications requiring switch and relay inputs.

Quad Parallel Interface Adapter — M68MM22

Utilizes four PIAs in a versatile buffered I/O configuration that allows up to 64 high-voltage (200 Vdc or 280 Vac) or high-current (to 3A) signals to be monitored or controlled.

Packaging Hardware

Part No.	Description
M68MMCC05	5-Card Cardcage
M68MMCC10	10-Card Cardcage
M68MMFLC1	Front Load Chassis, 14 Card, 110 Vac
M68MMLC1	Long Chassis, 10 Card, 110 Vac
M68MMSC1	Short Chassis, 5-Card, 110 Vac
M68MMPS-1	Power Supply, 110 Vac

I/Omodules

The I/O Channel is a new system architectural concept supported in Motorola Microsystem products which allows modular I/O expansion on the local processor bus.

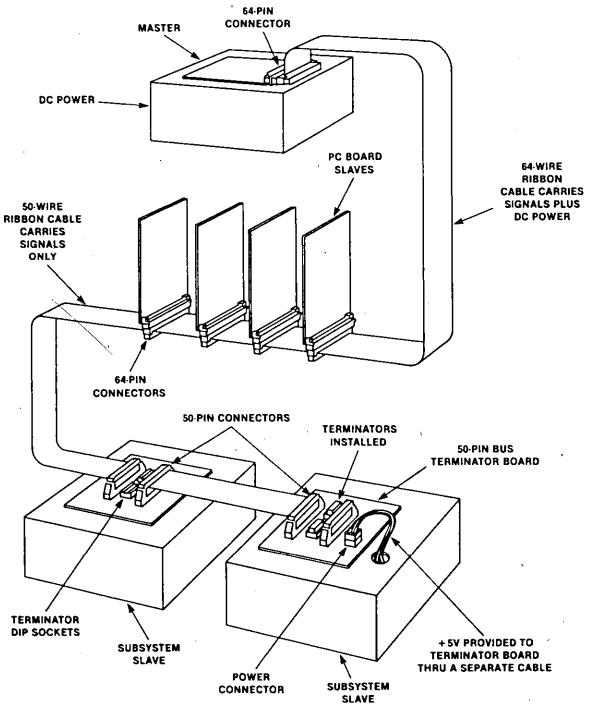
This frees the system bus to handle simultaneous high-speed data exchange and multiprocessor access requirements while permitting most lower speed system I/O activity to take place through the local I/O Channel. Thus, the advanced I/O Channel architecture affords great flexibility in I/O intensive applications such as high speed data acquisition and distributed control.

More than a dozen defined I/Omodule products already support the Motorola modular product line. The family will grow into the future with additional offerings from Motorola, and with a variety of I/O Channel compatible products from other vendors. Should you desire to design custom I/O Channel modules for your specific needs, that task is made easier by a comprehensive I/O Channel Specification Manual available from Motorola. (M68RIO1/D1)

The I/O Channel provides the following features:

- 12-bit address bus
- 8-bit bidirectional data bus
- Asynchronous operation
- Up to 2 megabyte transfer rate
- Four interrupt lines
- Reset line
- 4 MHz free running clock line

The figure below illustrates how a system might be configured using a ribbon cable bus I/O Channel. The bus master is typically a computer, but may also include a DMA controller for transferring blocks of data to or from a slave device at high speed.



I/Omodule Product Line

A. **I/Omodules** — I/O Channel Compatible, Single Eurocard Format.

MVME400 — Dual Channel RS-232C Serial Port providing two independent, full-duplex serial input/output ports.

MVME410 — Dual Channel 16-bit Parallel Port, four independent 8-bit ports jumper or software configurable as inputs or outputs.

MVME420 — SASI™ Peripheral Adapter provides interface to SA1400 Shugart Associates SASI Bus.

MVME435 — Buffered 9-Track Magnetic Tape Adapter to interface industry standard 800/1600 BPI, ½" Magnetic Tape Formatter.

MVME600 — Analog Input Module with 16 channel single-ended or 8 channel differential operation.

MVME605 — Analog Output Module with 4 independent channels and 12-bit resolution.

MVME610/615/616 — Opto Isolated 120V/240V AC Input/Output modules with eight independent I/O Channels.

MVME620/625 — Opto Isolated 3VDC Input/Output modules with eight channels and isolation to 2500 Volts.

MVME932 — I/O Channel Extender Board.

MVME933 — I/O Channel Wirewrap Board.

B. **I/Omodules** — I/O Channel Compatible, Non-Eurocard Format.

M68RWIN1-1, M68RWIN1-2 — Winchester Disk Controller for 5-½" or 8" Winchester and Floppy Disk drive combinations.

M68RFDC1 — Floppy Disk Controller for up to two 5-¼" or 8" daisy-chained double density single or double sided drives.

M68RI01 — Remote Input/Output Module provides parallel I/O operations and will accept up to 16 compatible solid state relay input and output modules.

M68RAD1 — Remote Intelligent Analog-to-Digital Conversion Module controlled by an on-board Intelligent Peripheral Controller.

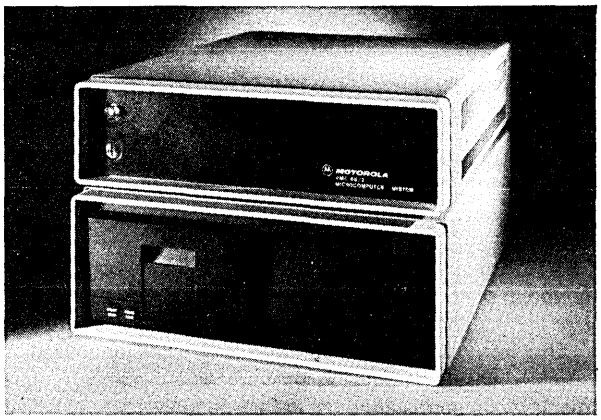
VMC 68/2 Microcomputer



The VMC 68 Series is a high performance microcomputer system family intended for application by OEM's and system integrators starting from a product integration level formerly available only to the minicomputer user. The VMC 68 System Family will find wide application in industrial process control, automated testing, data acquisition, supervisory control, and many other factory and lab automation uses. The VMC 68 Series is based on the 16-bit M68000-based VERSAmodule Family of modular microcomputer products utilizing the industry and IEEE proposed VERSAbus standard system interconnect providing multiprocessing and intelligent peripheral controller architecture.

Also featured is the I/O channel which provides for the use of a broad selection of I/O modules for I/O flexibility.

VMC 68/2 System Features and Capabilities

Hardware-Only Package	Complete System Package
• MC68000-based VM02 Monoboard Microcomputer — Direct Addressing to 16 Megabytes — 128K Bytes Dual-Port RAM — Multiprocessor Architecture with System Controller Features — I/O Channel Interface for Functional Tailoring — Dual Multiprotocol RS-232C Serial Ports for System Flexibility • Dual 16-Bit Parallel Port I/Omodule — Centronics compatible Printer Interface — General Parallel I/O Applications • VERSAbug Firmware — Debug — Disk Bootstrap Load — Self-Test — Up/Downline Load • MC68120-based VM21 Universal Disk Controller — High-speed DMA data transfer to/from 1 or 2 SMD interface compatible disk drives AND Up to 4 EXORdisk II or III Floppy Disk Drives • VM11 Dynamic RAM Module with 256K Bytes of "global" RAM for program development and efficient multitasking system operation • 4 or 8-slot VERSAbus compatible VMC 68/2 Chassis — Power Fail/Restart Circuitry — 5 or 10 I/Omodule card slots for I/O Channel functional tailoring (Dual Parallel Port module occupies one of these slots) • 0°C to 50°C (32°F to 122°F) Operating Temperature Range • For 115 Vac 60 Hz Operation	In addition to all features of the Hardware-Only package: • MLD-16 Mass Storage Unit incorporating Disk Drive, SMD interface electronic module, and Disk Power Supply • 16 Megabyte (unformatted) 8-inch SMD interface compatible Disk Drive — 8M Bytes Fixed, plus 8M Bytes Removable Cartridge for storage and one-to-one System Backup — Embedded Servo Information to eliminate cartridge interchange problems and the need for head alignment — Simple Installation — Quiet Operation — High Performance — Disk Compartment sealed during operation — Exceptional Reliability (7500 Hour MTBF) — Long Service Life requiring no preventive maintenance in a benign environment • VERSAdos Real-Time Multitasking Operating System with Assembler and Utilities, including: — MC68000 Structured Macro Assembler — Text Editor, Linkage Editor, and Multitasking Debugger — System Diagnostics — System Generation (SYSGEN) capability for feature tailoring of the VERSAdos System • +10°C to +40°C (50°F to 104°F) Operating Temperature Range

SYSTEM 3000

SEMICONDUCTOR MASS MEMORY . . . MUCH MORE THAN JUST BITS IN A BOX

MEMORY INTENSIVE

The System 3000 is a general purpose memory system that is a standard product designed with flexibility for user customizing. It utilizes Motorola's 64K HMOS dynamic RAM technology. Up to 16 memory array cards, containing 288 64K RAMs each, can be installed into a system giving the user a maximum of 32 megabytes of memory.

UNIQUE BUS ARCHITECTURE

The bus architecture of the System 3000 is unique. There are two internal bus structures offering the most efficient and flexible memory system. These are the MEMbus and array bus. The MEMbus is the communication link between the address control card (ACC)/error correction card (ECC) and the intelligent user card (IUC)/user I/O cards. Separate signal lines allow communication between the ACC and ECC. The array bus handles all the timing, control, and data for the memory array cards, based on 64 data bits and 8 error correcting bits. The user simply interfaces to the MEMbus via user I/O cards. This is the only customizing necessary to use the System 3000 for many applications.

BLOCK TRANSFER

The System 3000 has the capability of auto accessing at the rate of 80 megabytes per second.

SCRUBBING AND ERROR LOGGING

There is one address control card (ACC) required for each System 3000. The ACC generates the appropriate addresses, timing control signals, and refresh information. Sequential accesses such as high-speed block transfer are also controlled on the ACC. A scrubber circuit for correcting single bit failures during refresh and an error logger for pinpointing failure locations are other features of the ACC.

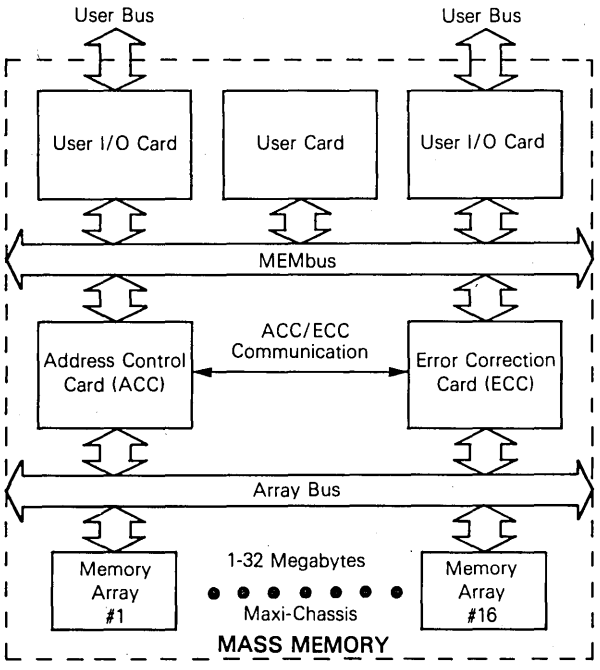
SELF CORRECTING

One ECC card is provided with each system for buffering and detection and correction of errors. A modified hamming code is used to correct all single bit errors and detect all single/double bit errors.

INTERFACING

Interfacing is accomplished with user I/O cards (up to three), and can be customized to handle any word width up to 72 bits. Each user I/O card provides 350 I/O lines. There is no need for extender cables, since 200 of these lines are connected through the motherboard.

SYSTEM 3000 BLOCK DIAGRAM



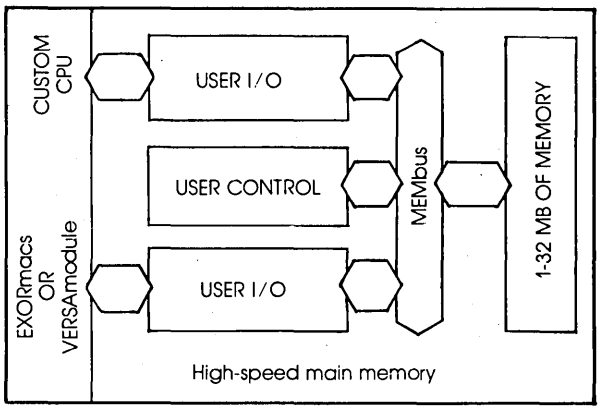
© IC MASTER 1983

SYSTEM 3000 FOR INNOVATIVE APPLICATIONS

Utilizing "standard customizing" for specific applications, the System 3000 becomes much more than just bits in a box. It has flexibility features designed for ease of user customizing.

MAIN MEMORY ADD-ON

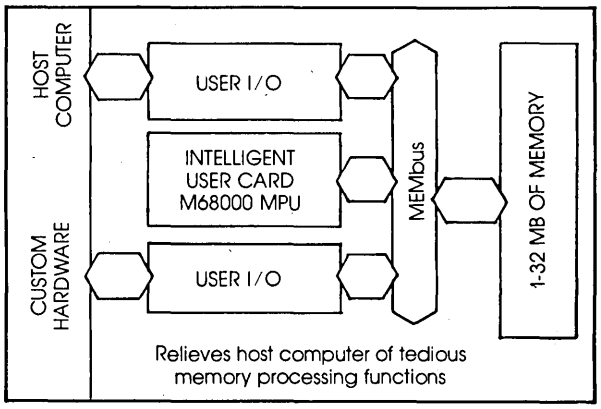
- Cost savings over custom design
- Flexible interface via User I/O boards
- Data integrity through Error Correction Card (ECC)
- Error Logger for preventive maintenance



High-speed main memory

INTELLIGENT MEMORY

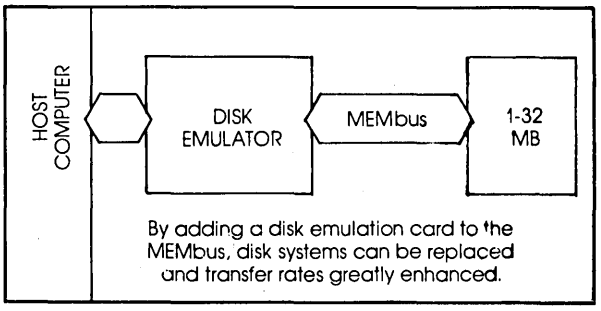
- Distributed processing
- Parallel processing
- Data formatting
- File manipulation
- Data reduction



Relieves host computer of tedious memory processing functions

DISK REPLACEMENT

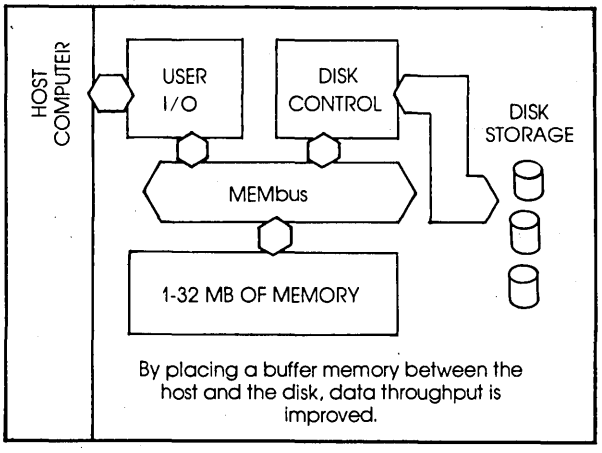
- CPU more efficiently utilized
- Improved reliability
- Random access (latency) improved (x 10,000)



By adding a disk emulation card to the MEMbus, disk systems can be replaced and transfer rates greatly enhanced.

DISK CACHE (DISCACHE™)

- Data transfer rate increased
- Efficient use of CPU
- Special functions such as data formatting and file manipulation



By placing a buffer memory between the host and the disk, data throughput is improved.

DISCACHE, EXORmacs, MEMbus, and VERSAmodule are trademarks of Motorola Inc.

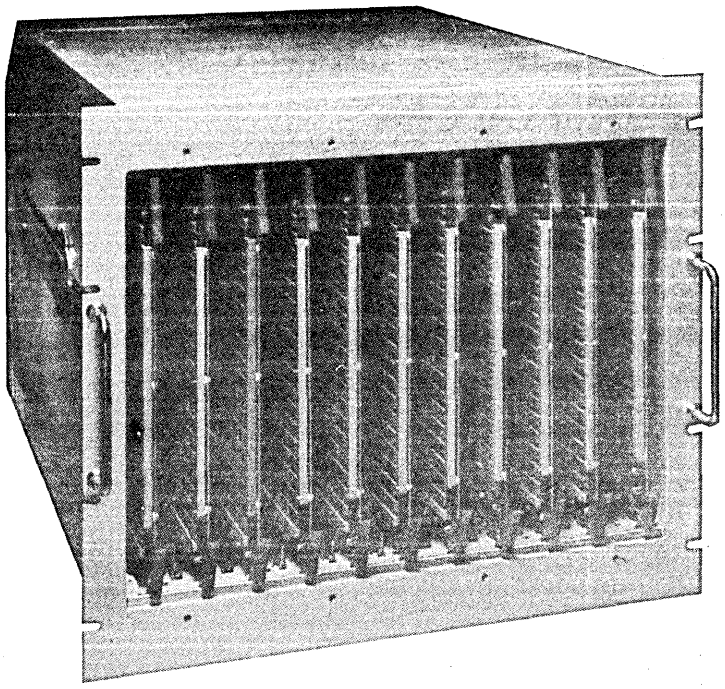
"RUGGEDIZED"
MASS MEMORY

Product Preview

SEMICONDUCTOR MASS MEMORY FOR MOBILE ENVIRONMENTS



- 1 to 32M Byte Capacity Utilizing Motorola's 64K Dynamic RAM
- 1 to 128M Byte Capacity Utilizing Motorola's 256K Dynamic RAM
- Meets Vibration and Shock MIL-STD Spec for Mobile Environments
- Block Transfer Rates up to 80 Megabytes/Second
- Customizing Ability with Three Interface Cards
- Flexible Interface via Standardized MEMbus
- Single Bit Error Correct and Double Bit Error Detect
- Error Logger Accessible Through Front Panel Keypad/Display
- Remote Analysis of Error Logger with RS232 Port
- Self-Test Capability with the System Diagnostic Module
- Utilizes the Same Interface and Options as the Commercial SYSTEM 3000

"RUGGEDIZED" MASS MEMORY

The SYSTEM 4000 contains up to 128M bytes of dynamic RAM for use in a mobile environment where reliability is a must, "Ruggedization" is a requirement in applications such as:

- Geophysical Data Acquisition
- Radar Data Analysis
- Communications "Mailbox" Buffers
- Medical X-ray Body Scanners

80 MEGABYTES PER SECOND

For high speed applications, the Block Transfer mode offers a sequential data transfer of a 64 bit data word every 100 ns (80 megabytes per second). This transfer rate is maintained without refresh interruptions creating a smooth synchronous data flow.

This document contains information on a product under development. Motorola reserves the right to change or discontinue this product without notice.

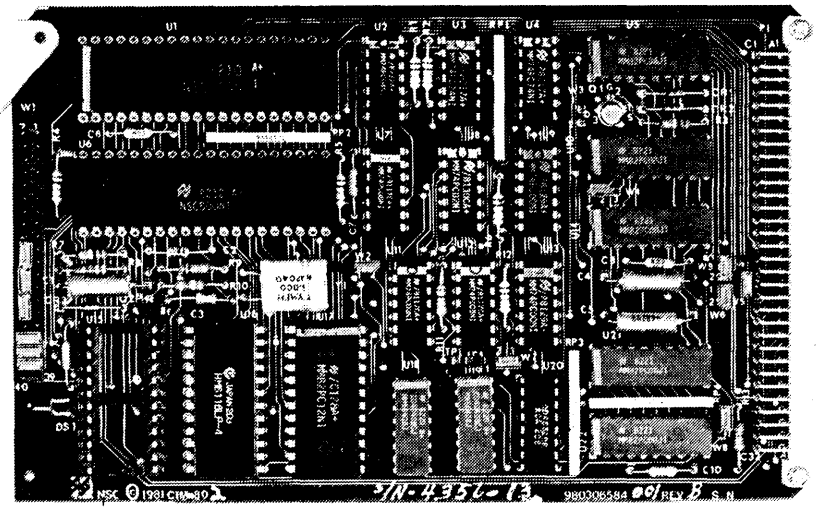
CIM™-802
Industrial Microcomputer



- **NSC800™-based computer board**
- **P²CMOS™ technology gives NMOS performance at CMOS power consumption levels**
- **NSC800 CPU—more than 158 instruction types programmable in Z80® code**
- **2 MHz operation in harsh environments**
- **−40°C to +85°C (−40°F to +185°F) operating temperature range**
- **Battery backup/operation**
- **2 16-bit counters/timers with prescalers**
- **16 programmable I/O lines**
- **System-level fail-safe timer**
- **2K bytes static RAM; 2K or 4K bytes PROM**
- **12 vectored interrupts**
- **Built solely with components burned in to A+ levels**

Product Overview

The CIM™-802 Microcomputer Board is a member of the SERIES/800™ line of CMOS Industrial Microcomputers (CIM) from National Semiconductor Corporation. SERIES/800 is a complete family, including CPU, memory expansion, and digital and analog I/O boards. Also included is a real-time, multitasking operating system, BLMX-80C. The line uses the P²CMOS™ NSC800 microprocessor, which combines the benefits of the execution speeds of NMOS microprocessors with the power dissipation and environmental characteristics of CMOS, and executes the Z80® instruction set. The complete line is compatible with the CIMBUS™, a documented scheme for board interconnection (see the CIMBUS specification). The CMOS technology employed, combined with the single-wide Eurocard form factor of the boards, makes the SERIES/800 line appropriate for many applications in harsh environments, such as numeric machine control, pipeline monitoring and control, robotics, industrial instrumentation, and uninterruptable power supplies.

The CIM-802 is the board level computer that is the heart of the SERIES/800 CMOS Industrial Microcomputer board line. Featuring NSC's P²CMOS technology, this computer provides highly reliable performance over a wide range of harsh environmental conditions at low power consumption, and is eminently suitable for remote station and process control applications.

SERIES/800™, CIM™, CIMBUS™, DIBTM, P²CMOS™ and NSC800™ are trademarks of National Semiconductor Corp.

Z80® is a registered trademark of Zilog, Inc.

CIM™-802

National Semiconductor

The CIM-802 is a complete computer based on the NSC800 central processing unit, and includes sixteen programmable I/O lines, twelve priority vectored interrupts, 2K bytes of static RAM, provisions for 2K or 4K bytes of ROM, and two 16-bit programmable timers. The NSC800 CPU, which is programmable in Z80 code, has an instruction set containing more than 158 instruction types. The CPU board is easily expandable via the CIMBUS for operation with other products in the SERIES/800 line, such as memory expansion, A/D and D/A conversion, serial I/O, and a battery charger. See the CIMBUS specification manual for a description of CIMBUS characteristics (order as CIMBUSM or Manual #420306681-001).

Power consumption of the computer is very low (less than three-tenths of a watt), which results in increased reliability and eliminates the need for separate cooling fans and filtering systems. CIMBUS connections are made through two-piece, pin-in-socket DIN 41612 connectors, which are highly resistant to vibration and corrosion, and eliminate the card edge connector, a primary failure source in many systems. The CIM-802 board is small, measuring only 100 mm x 160 mm (3.9" x 6.3"), and fits into the CIM-602 (8-slot) or CIM-604 (18-slot) CIMBUS card cages to make a tidy, durable system.

Functional Description

Central Processor

- CPU—NSC800 microprocessor
- Maximum addressing range—64K bytes
- Data word—8 bits
- Instruction word—8, 16, or 24 bits
- Addressing modes—direct, register, indexed register, register indirect, and immediate
- Instruction types—more than 158, programmable in Z80 code
- Registers
  - —14 general purpose, A, B, C, D, E, H, and L and A', B', C', D', E', H', and L'; A (accumulator) and F (flag), A' and F' selected separately. Other registers may be used singly or in pairs; AF, BC, DE, HL and A'F', B'C', D'E', H'L'.
  - —2 16-bit index register pairs IX and IY may be indexed ±255 from symbolic location
  - —1 16-bit program counter (PC)
  - —1 16-bit stack pointer (SP) used discretely or automatically to implement subroutine CALL and RETurn instructions
  - —1 8-bit refresh register (R)
  - —1 8-bit interrupt register (I)

Memory

The 2K private static RAM (6116) is a byte-wide, low power device requiring only a few microwatts to retain data, and uses special write inhibit logic to protect its contents in a power-down or standby mode. An additional 128 bytes of RAM are available from the NSC810 RAM I/O Timer. The 2K static RAM is mapped at addresses F000H-F7FFH; the additional 128 bytes at F800H-F87FH.

Sockets are provided on the CPU board for either the 27C16 (2K bytes) or the 27C32 (4K bytes) EPROM. Two Berg jumpers provide all the logic changes necessary for using either type of EPROM. Assigned addresses for ROM are 0000H-07FFH (27C16) or 0000H-0FFFH (27C32).

Memory expansion to a maximum of 64K bytes is possible using the CIM-100 Series Memory Expansion Boards.

Input/Output

All on-board input/output functions are memory mapped through the NSC810 RAM I/O Timer with a base address of F8XXH.

- Interrupts—arbitrated through a priority interrupt controller
  - —1 nonmaskable interrupt
  - —3 restart maskable interrupts available to user
  - —8 priority vectored interrupts
- Three programmable I/O ports
  - —Port A, 8 lines available to user
  - —Port B, 8 lines, 4 generally reserved for CPU board use
  - —Port C, 6 lines, 2 generally reserved for CPU board use

  (Some system configuration may allow use of all 22 I/O lines)
- Timers
  - —2 16-bit programmable counters/timers; timer prescale 1/2/64 (64 on timer TO only)
  - —8 msec. and 0.5 second timers jumperable as interrupts

Fail-Safe Timer

The fail-safe timer is a software timer implemented through Port B of the NSC810. If the user chooses to implement this feature, the CPU must be programmed to toggle bit 4 of Port B based on the 0.5 second on-board timer. This provides a one Hertz signal to the CIMBUS that is used to retrigger a monostable multivibrator (one-shot) on any expansion board. If the CPU should fail, the CIMBUS signal TMRFS will no longer be output. The expansion board(s) will then set their outputs to a known quiescent state, ensuring an orderly shutdown without a CPU. An on-board LED indicates the state of TMRFS and also allows for a quick visual inspection of the health of the CPU board.

CIM-660 Firmware Monitor

The CIM-660 Firmware Monitor is available in a preprogrammed NMC27C16 EPROM. This compréhensive monitor includes facilities to load, execute, and debug programs based on the CIM-802 CPU board. The monitor allows the user to examine and modify any RAM location or CPU register. It also allows the movement of blocks of data within memory and initiation of user programs with optional breakpoints. The user can employ the monitor to search memory to find the location of an eight- or sixteen-bit string. The CIM-660 will calculate the sum and difference

© IC MASTER 1983

of any four-, eight-, or sixteen-bit set of numbers. Additionally, the monitor can be used to exercise all available I/O ports within the system. The CIM-660, in conjunction with a CIM-201 Serial I/O Board, incorporates a baud rate search to determine the rate at which the CRT/TTY is running. The following commands are supported in the CIM-660 Firmware Monitor:

- D — Display contents of memory
- E — Examine CPU registers
- F — Find bit stream in memory
- G — Execute program (with optional breakpoints)
- H — Calculate the sum and difference of two hex values
- I — Input data from I/O port
- M — Move block of data
- O — Output data to I/O port
- S — Examine and/or substitute value in memory
- V — Verify result of move command

Real-Time Software

The BLMX-80C real-time multitasking executive requires only 2K bytes of EPROM and 512 bytes of RAM in its minimum configuration. Facilities such as the following are included: priority-based system resource allocation, intertask communication and control, interrupt-driven control for standard I/O devices, time-of-day clock, free space memory manager, and interrupt and event handling. Optional linkable and relocatable modules for console control (CRT or TTY), fail-safe timer interface, analog I/O board interface, and interactive system-level debugging are provided with the BLMX-80C package. User configurability is aided on the STARPLEX Development System by the menu-driven SYSCON System Configuration program that is also provided with BLMX-80C.

System Development Capability

The development cycle for CIM-802-based products may be significantly reduced using the STARPLEX Development System from National Semiconductor Corporation. The convenience of a comprehensive operating system combined with system prompts that guide even inexperienced users through complex tasks creates an ideal software development environment. An In-System Emulator (ISE) available for the NSC800 allows the development and debugging of software directly on the CIM-802 board.

Specifications

Microprocessor

CPU — NSC800

Data word — 8 bits

Instruction word — 8, 16, or 24 bits

System Clock — 4 MHz

CPU speed — 2 MHz

Minimum instruction execution time — 2 μsec.

Registers — 14 general purpose
2 index
Program counter
Stack pointer
Refresh register
Interrupt register

Number of instructions — 158 instruction types, providing for more than 600 executable instructions (Z80 code compatible)

Address capacity — Memory - 64K bytes
I/O - 256 input
256 output

Memory

RAM — 2K bytes static RAM (6116) plus 128 bytes in NSC810 RAM I/O Timer

ROM — sockets for 2K bytes (27C16) or 4K bytes (27C32) ROM

Expansion — via memory expansion boards to 64K

Access time — 350 nsec.

Address assignments —

Address Range	Assignment
0000H-07FFH	On-board PROM (using 27C16)
0800H-0FFFH	Off-board (unassigned) if 27C16 PROM is used. On-board EPROM if 27C32 PROM is used
1000H-EFFFH	Off-board (unassigned)
F000H-F7FFH	On-board RAM (2K byte RAM, battery backup available)
F800H-F87FH	On-board RAM (NSC810 128 byte RAM, not backed up during power failure)
F880H-F8FFH	NSC810 I/O port and timer control access (memory-mapped)
F900H-FFFFH	Reserved

For more information on this and other CIM products, contact your local sales office.

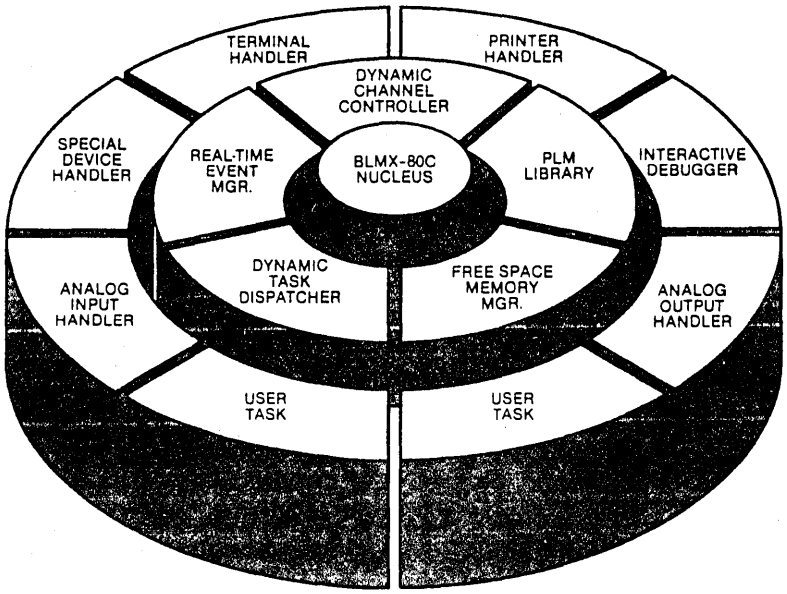
BLMX-80C
Board-Level, Multitasking Executive for NSC800™-Based Systems



- **Configurability**
  - Fully user configurable
  - Menu selection procedure
  - Hardware independent
- **Compatibility**
  - NSC800, Z80®
  - Bus-like structure
- **Reliability**
  - Small, efficient nucleus
  - Simple user interface
  - Standard data structures
- **User-Oriented Support**
  - Extensive I/O handlers
  - Analog handlers
  - Linkable interactive debugger
- **Easy-to-Use**
  - Prompting menus guide system configuration
  - Comprehensible system functions
  - Functional similarity for internal and external calls
  - Reconfigurable

Product Overview

The BLMX-80C software system is a real-time, multitasking executive, specifically designed for use with National Semiconductor Corporation's CMOS Industrial Microcomputer (CIM™) products, but is equally usable for any NSC800-based system. It has been optimized for real-time applications such as process control, manufacturing monitoring, and data acquisition systems. The BLMX-80C Executive is fully modular and can readily be configured to suit applications needs. It is completely hardware and location independent, thereby providing a fundamental base upon which users can build a wide range of applications systems. In addition, BLMX-80C provides a bus-like structure that helps to integrate software with its underlying hardware through predefined data structures and interconnect procedures. This concept of software-bus architecture ensures maximum quality of standardization for compatibility and future expandability.

The BLMX-80C nucleus requires only 512 bytes of RAM and 2K bytes of ROM. The system contains all major real-time functions including task scheduling, intertask communication and synchronization, interrupt handling and I/O control, as well as many optional features.

BLMX-80C provides support for all CIM CPU boards: CIM-801, CIM-802, and CIM-804, as well as the CIM-201 Serial I/O Board and the CIM-411 and CIM-421 Analog I/O Boards. Real-time modules include a handler for the System-Level Fail-Safe Timer and cold/warm start initialization. A linkable, interactive, system-level debugger is also supplied.

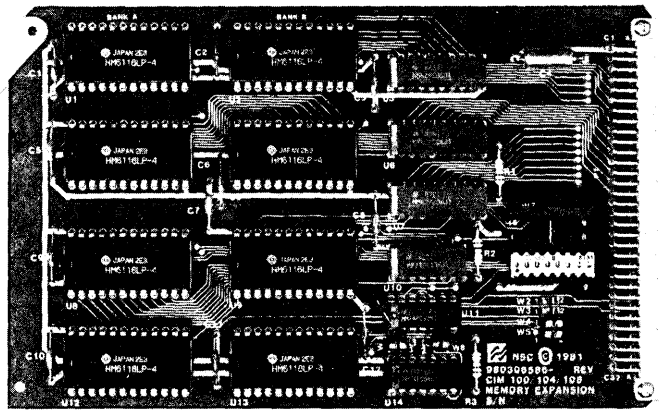
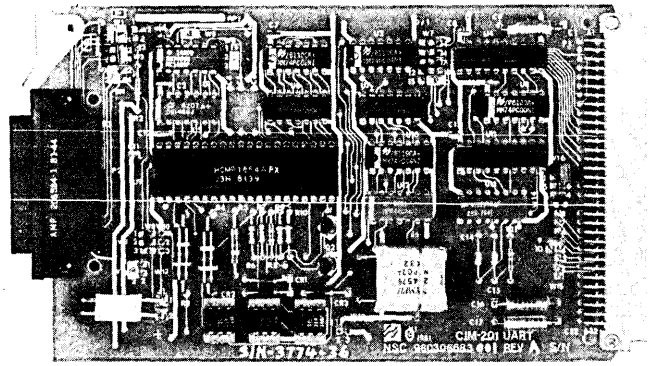
CIM™-100/104/108 Memory Expansion Boards



- Adds RAM and/or PROM to a SERIES/800™ system
- Supports 2k x 8 PROM/RAM and 4k x 8 PROM devices
- Address-assignable on 16k boundaries
- High performance, low power P²CMOS™ and CMOS technology
- Fits CIM-602/604 card cage
- All required connections for CIMBUS™ compatibility provided on-board
- Single 5 V_{DC} power supply
- −40°C to +85°C (−40°F to +185°F) operating temperature range
- Built solely with components burned in to A+ levels

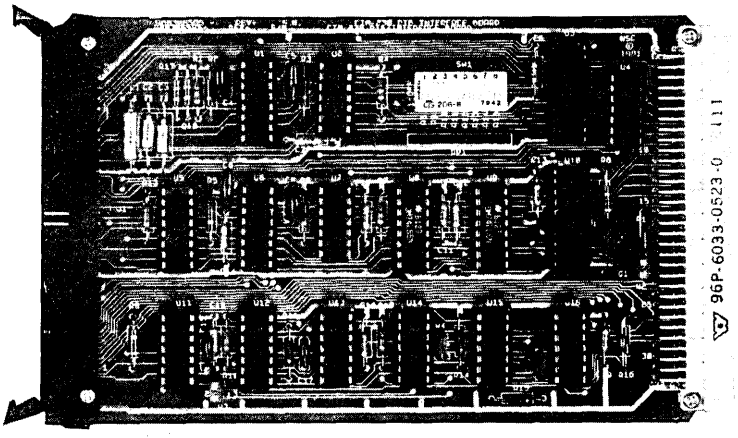
CIM™-201 Serial Input/Output Board



- Single-channel asynchronous transfer of serial data
- RS-232C or optically isolated 20 mA current loop operation
- Interfaces with wide variety of terminals, computers, printers, and other peripheral equipment
- May be configured as either data set (DCE) or data terminal (DTE)
- Can be used in pairs in demand/response mode
- User-selectable baud rates from 50 to 153600
- Standard 25-pin "D" connector for serial data
- CIMBUS™-compatible with SERIES/800™ line
- Small 100 mm x 160 mm Eurocard form fits directly into CIM-602/604 card cages
- P²CMOS™ and CMOS technology give high reliability at low power consumption
- −40°C to +85°C (−40°F to +185°F) operating temperature range
- Designed for demanding use under harsh environmental conditions
- Built solely with components burned in to A+ levels

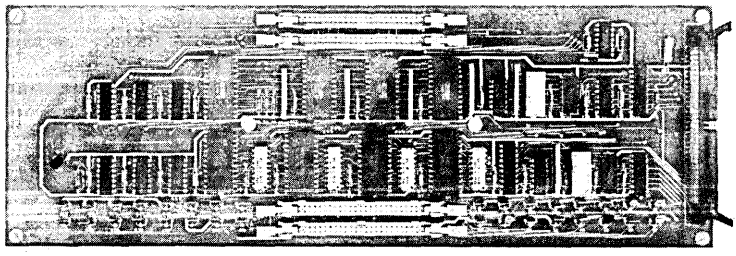
© IC MASTER 1983

CIM™-230
Distributed I/O Bus (DIB™) Interface Board



- **Provides the interface between the CIMBUS™ and the DIB**
- **Small (100 mm × 160 mm) single-wide Eurocard form fits CIM-602/604 card cages**
- **P²CMOS™ and CMOS technology give high reliability at low power consumption**
- **−40°C to +85°C (−40°F to +185°F) operating temperature range**
- **Built solely with components burned in to A+ levels**
- **DIB offers advantages for many applications**
  - —Software I/O routines are the same for all DIB I/O
  - —Single 60-pin flat cable used to interface/multi-drop up to 256 input ports and 256 output ports
  - —Polarized interface hardware ensures correct connections
  - —Switched high voltage/current interfaces remote from card cage
  - —Form factor and mounting method for user-designed DIB boards dictated only by application convenience

CIM™-311
Power I/O DIB™ Board

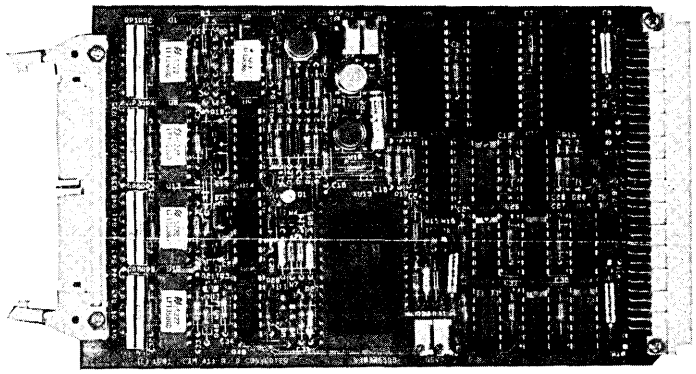


- **Allows the instant addition of popular solid state relay racks to a CIMBUS™ system**
  - Provides high voltage/current switching
  - Isolates switching-induced noise from the computer bus
  - Provides terminal strips for interface connections
- **Four maskable interrupts on positive or negative-going signals, or on any change of state**
- **Interfaces to a CIMBUS system via the Distributed I/O Bus (DIB)**
- **−40°C to +85°C (−40°F to +185°F) operating temperature range**
- **P²CMOS™ and CMOS technology provides high reliability**
- **Built solely with components burned in to A+ levels**

© IC MASTER 1983

National Semiconductor

CIM™-411 Analog Input Board



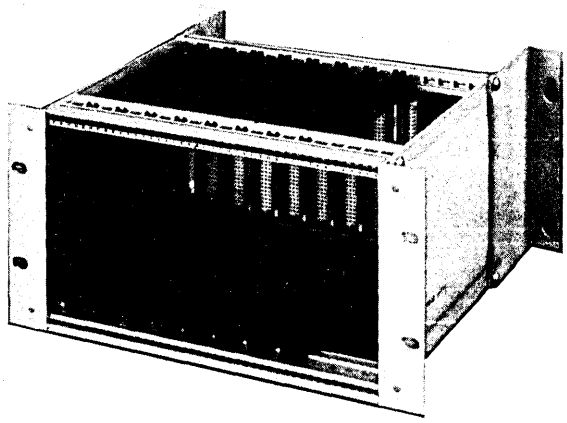
- 32 single-ended, 16 differential, or 8 differential and 16 single-ended channels
- CPU program scan control: interrupt, hold, poll, or hold and poll
- Continuously adjustable input ranges between 1 to 2 and 10 to 20, or 4 mA to 20 mA current loop
- 12-bit resolution
- 50 μs conversion time
- P²CMOS™ and CMOS technology give high reliability at low power consumption
- −40°C to +85°C (−40°F to +185°F) operating temperature range
- CIMBUS™-compatible with SERIES/800™ line
- Small (100 mm × 160 mm) single-wide Eurocard form fits CIM-602/604 card cages
- Built solely with components burned in to A+ levels

CIM™-421 Analog Output Board

- Two output channels
- 12-bit resolution
- Voltage or current-mode outputs
  —0V to +10V
  — −10V to +10V
  —4 mA to 20 mA current loop
- P²CMOS™ and CMOS technology give high reliability at low power consumption
- −40°C to +85°C (−40°F to +185°F) operating temperature range
- CIMBUS™-compatible with SERIES/800™ line
- Small (100 mm × 160 mm) single-wide Eurocard form fits CIM-602/604 card cages
- Built solely with components burned in to A+ levels

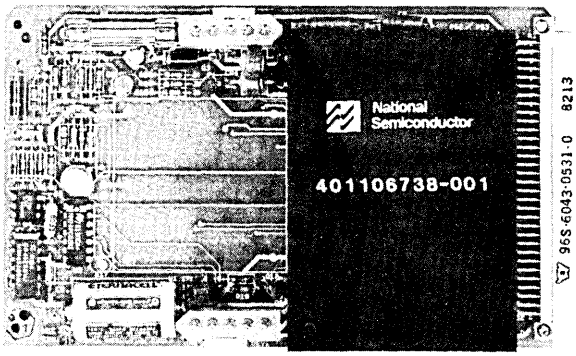
© IC MASTER 1983

CIM™-602/604 CIMBUS™ Card Cages



- Two versions
  - CIM-602: 8 slots, 10.5 inches wide
  - CIM-604: 18 slots, 19 inches wide
- Backplane and power supply connectors included
- Prototyping slots included in CIM-604
- Full access to active system components/ signals available with CIM-640 Extender Board
- Provisions for front or rear mounting
- NEMA enclosure and RETMA chassis-compatible
- −40°C to +85°C (−40°F to +185°F) operating temperature range
- CIMBUS-compatible with SERIES/800™ line

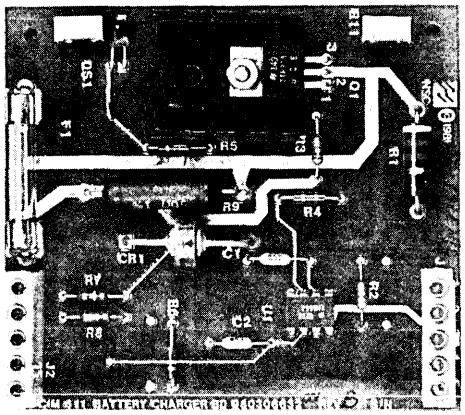
CIM™-610 Voltage Regulator Board



- Supplies +5, +15, and −15 V_{DC} to CIMBUS™ interface
- Accepts unregulated DC input from 10.5 to 17.0 volts
- Detects both AC and DC power failures
- Provides RAM backup power from on-board lithium battery
- Self-protects against overloads, transients, and shorts
- Provides connectors for direct mounting of CIM-611 Battery Charger Board
- P²CMOS™ and CMOS technology give high reliability at low power consumption
- Operating temperatures range from −40°C to +85°C (−40°F to +185°F)
- CIMBUS-compatible with SERIES/800™ line
- Small (100mm x 160mm) single-wide Eurocard form fits CIM-602/604 card cages
- Built solely with components burned in to A+ levels

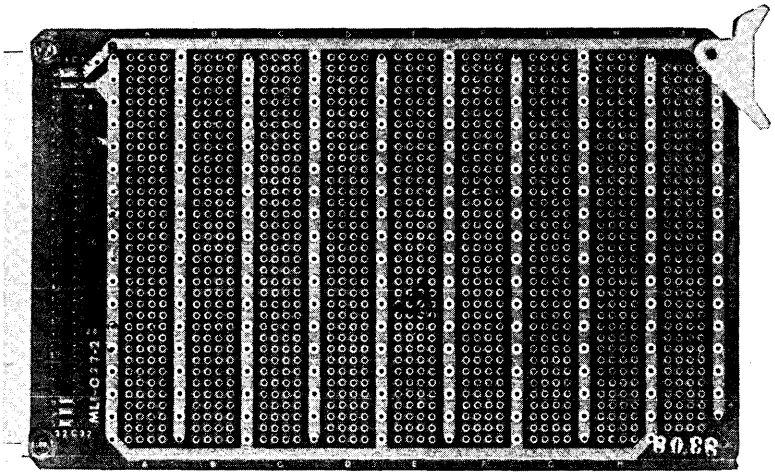
© IC MASTER 1983

CIM™-611
Battery Charger Board



- Mounts directly on CIM-610 Voltage Regulator Board
- Automatically adjusts charge current to state of battery discharge
- Two charge rates — trickle and "fast"
- Operating temperature range from −40°C to +85°C (−40°F to +185°F)
- Built solely with components burned in to A+ levels

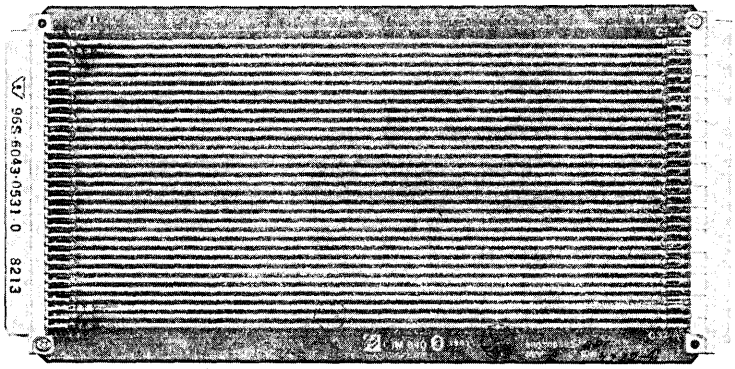
CIM™-630
Prototyping Board



- Permits addition of user-designed circuitry to a CIMBUS™ system
- Capacity for 32 16-pin DIPs
- Plugs directly into CIM-602/604 card cages

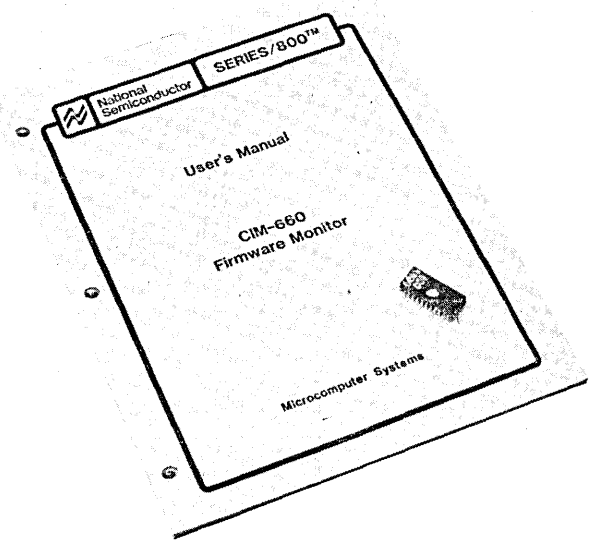
© IC MASTER 1983

CIM™-640 Extender Board



- Complete access to a CIMBUS™ board for troubleshooting or debugging
- Power isolation allows removal/insertion of boards without loss of data or functions as well as current measurement in a powered system
- Easily accessible test points for fast examination of bus and control signals

CIM™-660 Firmware Monitor



- Single-chip system monitor for CIM-800 boards
- Display contents of memory or processor registers
- Modify contents of memory or processor registers
- Modify user programs dynamically
- Move blocks of data
- Perform hexadecimal arithmetic
- Search memory for specified data byte
- Execute user programs from monitor
- Insert breakpoints in user programs
- Input or output a byte of data
- Resides in a single NMC27C16 EPROM

Microboard Computer Modules

The RCA CDP18S600 series includes a line of single-board computers plus a variety of expansion memory and I/O boards and accessory hardware. These boards may be combined to provide customized microcomputer systems for specific applications.

The CDP18S601 through CDP18S605 are functionally identical to the CDP18S606 through CDP18S610, respectively, except that the latter group of Microboard computers have the CDP1805 CPU which includes a timer/counter.

- **Simple to use**
- **Low-cost power supply**
- **Compact universal bus**
- **Excellent noise immunity**
- **100% testing and burn-in**
- **Wide operating temperature range (-40°C to +85°C for most types)**
- **Low-power operation**
- **Development-system capability**

Microboard Computer Development Systems

The Microboard Computer Development Systems (MCDS), economical and highly versatile, facilitate the design of hardware and software for applications based on the CDP1802 CMOS microprocessor.

The CDP18S693 comes complete with an audio-type cassette unit and full-floating point interpreter BASIC 3 (in firmware).

The CDP18S694 includes the following additional features, (also available as options for the CDP18S693): ROM-based Assembler Editor, a second cassette unit for memory storage, and a PROM programmer module.

The CDP18S695 color MCDS is a complete stand-alone software development system for any CDP1802 application. This system, like the CDP-18S694, offers the user the option of developing with Assembler Editor or in BASIC3 high-level language.

MCDS Systems	CDP18S 693	694	695
System Includes:			
• CDP18S601 Computer	X	X	X

MicroDisk Development System MS2000

The RCA MicroDisk Development MS2000 is a new microprocessor computer system utilizing 3½-inch, high-density microfloppy disk drives. The disks provide 645 kilobytes of on-line mass memory storage. Featuring higher speeds than its predecessors, the MS2000, with its new DMA controller, has reduced system load time from 45 seconds to 0.6 second. The MS2000 is designed to facilitate the development of hardware and software for applications based on the RCA 1800 series of CMOS microprocessor products.

The MicroDisk Development System is contained in a 20-slot Microboard Industrial Chassis. The chassis is 5.76 x 10.08 x 14.7 inches and contains not only the four Microboards provided, but also the power supply and the complete Dual Microfloppy Disk Drives. The chassis provides four additional spare slots for expansion and enhancements with any of the extensive line of RCA Microboards.

The memory includes 62 kilobytes of RAM, 2 kilobytes of ROM and 645 kilobytes of on-line mass memory storage on microfloppy disks. Software provided includes an augmented resident monitor program UT70 and the MicroDOS operating system. MicroDOS includes an Editor and a MacroAssembler ASM8 that operates not only with all the RCA CMOS Microprocessors CDP1802A, CDP1802AC, CDP1802BC, CDP1804AC, CDP1805C, CDP1805AC, CDP1806C, and CDP1806AC, but with RCA Microprocessors to be added to the expanding line.

Conversion programs are included that provide transportability of source code from all other RCA Development Systems to the MS2000.

Optional add-ons include a PROM Programmer package, BASIC1 and BASIC2.

Hardware Features

- **CMOS Microboard Computer with UART Terminal Interface**
- **CMOS Microboard 32-Kilobyte Memory Modules (2)**
- **Microfloppy Disk LSI Controller with DMA CDP18S651**
- **Dual 3½-Inch, High-Density Microfloppy Disk Drive Module (645 KB) MSIM 50**
- **Switching Power Supply Module with Power-On Reset and Control Functions MSIM 40**
- **20-Slot Industrial Microboard Chassis**
- **4 Spare Slots for Expansion with the Extensive RCA Line of over 70 Microboard Products**
- **Two-Kilobyte ROM for Monitor**
- **Two Spare Diskettes**
- **Interface Cables**
- **Operates with Any Standard Data Terminal**
- **Combining with CDP18S040 CRT Terminal Provides Full-Screen Editing**
- **Combining with MSE3001 MicroEmulator Provides Full-Screen Editing plus Debugging Capabilities for All RCA Microprocessors**

Software Features

- **MicroDOS File Management and Operating Systems**
- **MacroAssembler for All RCA Microprocessors**
- **Editor**
- **Higher Operating Speeds**
- **Expanded Monitor Functions**
- **Self-Test Capability**

© IC MASTER 1983

MicroEmulator MSE3001

The RCA MicroEmulator MSE3001 is a powerful, self-contained, portable emulator for simplifying and augmenting the development of microprocessor software and hardware systems. Its modular design enables it to support other 8- and 16-bit microprocessors by simply changing the personality module. As a debugging tool it is used to stop on a condition, check the status of the system under test, modify its state, and continue executing. It operates without the use of any other equipment. As a data terminal, it provides full-screen editing capability and is particularly suited for operation with the new RCA 3½-inch MicroDisk Development System MS2000.

The MicroEmulator has an 80-character by 24-line **cathode-ray** tube that displays sufficient data for a full analysis. It has a full ASCII keyboard plus special-function keys for full-screen editing and soft keys for command entry. The soft keys are defined on the bottom row of the screen and change labels and functions to suit each new task.

The MicroEmulator is a **"user-friendly"** system. It provides the user with several options for entering commands including full-screen editing. It detects errors instantaneously, flags them with English error messages, and restores the original data for reentry. The user may enter a command word by striking one soft key or, if touch typing is preferred, by abbreviating the command word. The MicroEmulator always prompts the user for command data. Experienced users, however, need not wait for prompts and may proceed as rapidly as desired.

The MSE3001 is a versatile, self-contained instrument that can be used very efficiently not only in system design and development, but also in factory testing and field servicing.

Features

POWERFUL EMULATOR

- **Extensive Set of Debugging Facilities**
- **Debug Software Either With or Without System-Under-Test**
- **Handles Multiple Number Bases**
- **16 Real-Time Breakpoints Definable, 4 Active at Any One Time**
- **Disassembly while Executing**
- **Real-Time Memory Map Option**
- **Logic Analyzer Option**

USERS FRIENDLY

- **Full-ASCII Detachable Keyboard plus Special-Function Keys**
- **Full-Screen Debugging**
- **Soft Key Command Entry**
- **Instantaneous Error Detection**
- **9" by 5" CRT**
- **80-Character by 24-Line Display**
- **CRT Data Terminal Capabilities**

SUPPORTS ALL RCA MICROPROCESSORS

- **Modular**
- **Self Contained**
- **Download and Upload from Most Development Systems and Computers**
- **Portable**

DISPLAYS

Following is a listing of the available screen displays. Each features **full-screen editing** and **soft-key command entry** to modify any and all displayed data.

REGISTERS — All internal CPU registers
MEMORY — Displays full page (256 bytes)
I/O SIGNAL STATUS and control
COUNTER/TIMER — For CDP1804, CDP1805, CDP1806
BREAKPOINT — 4 active breakpoints up to 64 bits wide
RUN — Real time
STEP EXECUTION — Displays address bus, disassembled data bus
CLOCK — Three sources including internal frequency synthesizer
TERMINAL — For any external system including RCA MicroDisk MS2000
MEMORY MAP OPTION — Write-protect capability
LOGIC ANALYZER — Real-time trace data displayed in multiple bases, disassembled or as waveforms

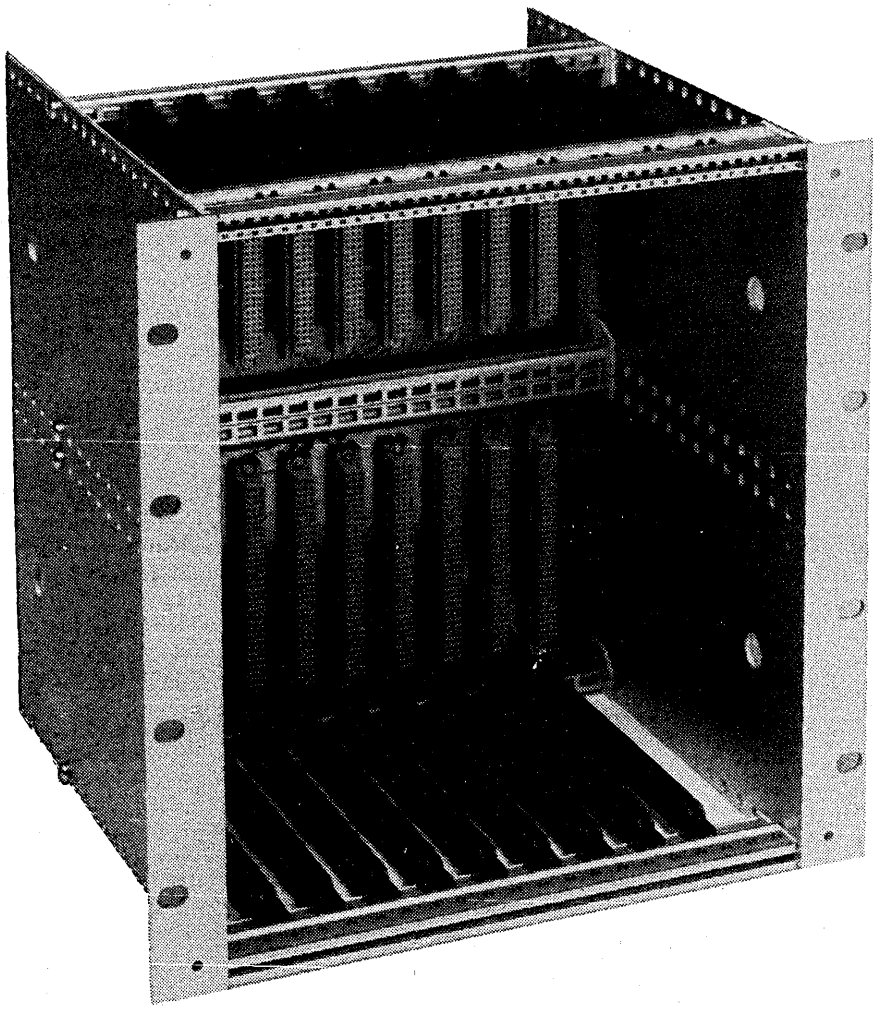
SMVME0500
CARD CAGE ASSEMBLY

PRODUCT BRIEF
PRELIMINARY



FEATURES

- **Meets all VMEbus specifications**
- **Accommodates up to nine double Eurocard size boards (160mm x 233.4mm)**
- **Includes low noise backplanes with 96 pin J1 and J2 connectors**
- **Compatible with standard VMEbus board front panels and card ejectors**
- **Side flanges for easy mounting**
- **Tapped strips in front permit securing board front panels to cage**

DESCRIPTION

The Signetics nine slot VMEbus card cage is an integral part of the entire Signetics VMEbus product line. It offers the OEM a reliable, low noise, mounting and interconnect facility for configuring VMEbus board based systems to meet the needs of nearly any application. The card cage and associated backplane accommodate up to nine double Eurocard format boards. The card cage allows standard board front panels to be locked in place with screws by utilizing the tapped strips on the front of the cage. The backplanes are resistor terminated at both ends and include both J1 and J2 connectors for all nine slots.

© IC MASTER 1983

SMVME0500 CARD CAGE ASSEMBLY

BACKPLANE FEATURES

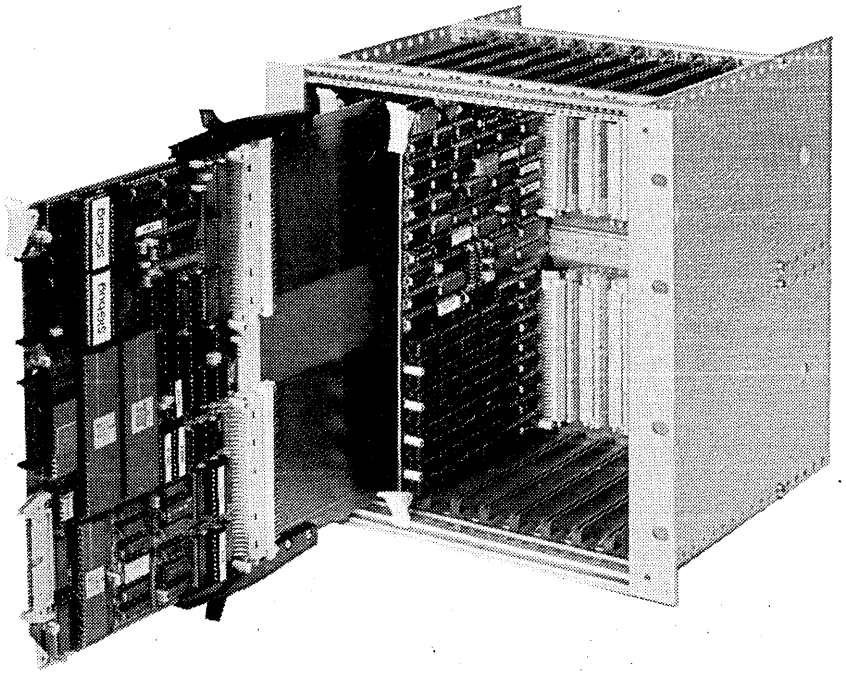
- Meets all VMEbus specifications
- J1 backplane implemented on a five layer board with Signal-Ground-VCC-Ground-Signal designed to insure uniform impedance
- J2 backplane implemented on a two layer board
- 64 pins of user-defined I/O on J2 connector
- Ground lines between adjacent signals to minimize crosstalk
- Terminated at each end as defined in VMEbus specification
- All holes plated through
- Pressfit DIN 41612 connectors with wire wrap tails at each connector position

J1 BACKPLANE SPECIFICATIONS

- Five layer epoxy glass construction
  nominal thickness 2.4mm
  Dialectric to BS4584EP-GC-CU-3 (FR4)
- Copper thickness 35μm finish-plated copper 50μm average
- Tin lead 8μm maximum
- Total 93μm outside layers only
- J1 backplane power connections
  1 - 3 pin polarized "mate-n-lock" (AMP P/N 350776-1)
  3 - 4 pin polarized "mate-n-lock" (AMP P/N 350779-1)
- Power handling capacity of 27 AMPs 5 volts for J1 backplane

J2 BACKPLANE SPECIFICATIONS

- Two layer epoxy glass construction
  nominal thickness 2.4mm
- Copper thickness 35μm finish-plated copper 50μm average
- Tin lead 8μm maximum
- Total 93μm outside layers
- J2 backplane power connections
  1 - 4 pin polarized "mate-n-lock" (AMP P/N 350779-1)
- Power handling capacity of 9 AMPs 5 volts for J2 backplane



CARD CAGE MECHANICAL SPECIFICATIONS

- Overall Dimensions
  Height 278.9mm 10.98 in. (includes wire wrap pins)
  Width 268.6mm 10.575 in. (includes mounting flanges)
  Depth 182mm 7.16 in.
- Number of card slots: 9
- Card format: Double Eurocard (160mm x 233.4mm)
- Weight: 5 lbs.
- Shipping weight: 7 lbs.

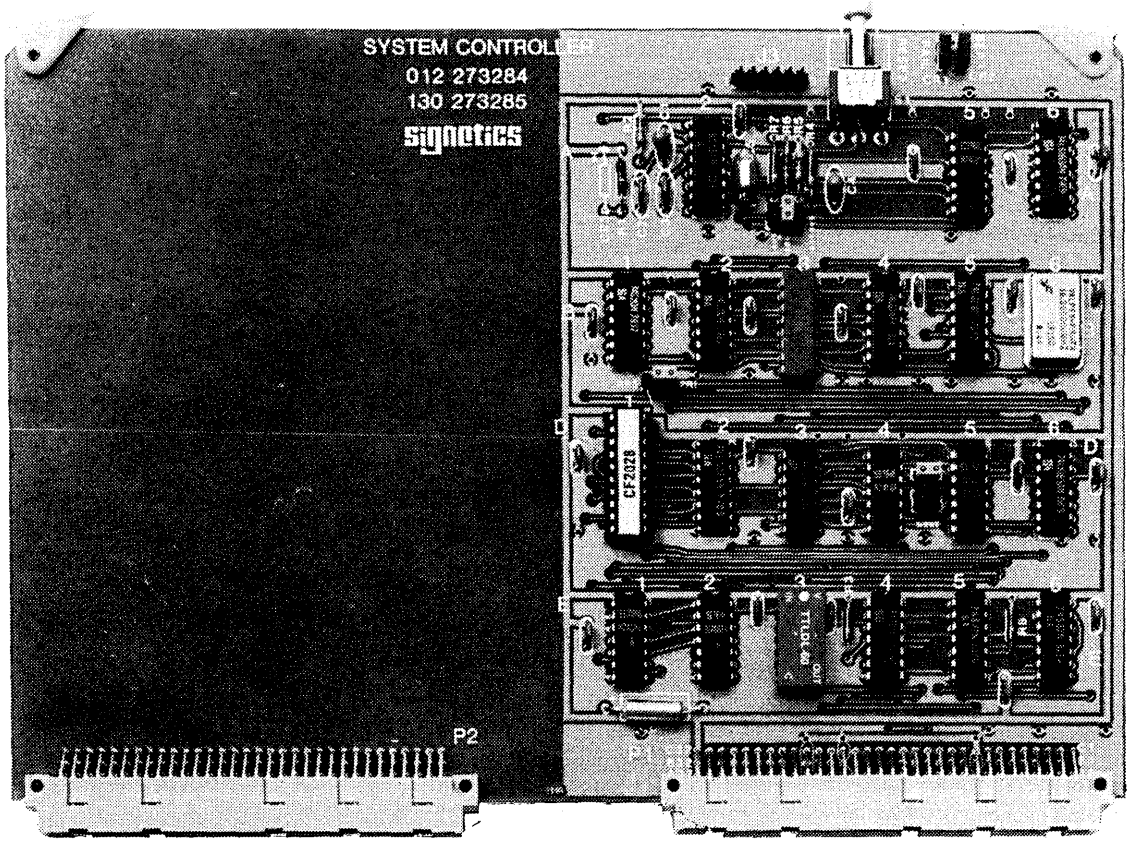
SMVME1500
VMEbus SYSTEM CONTROLLER

PRODUCT BRIEF
PRELIMINARY



FEATURES

- **PROVIDES TOTAL BUS ARBITRATION**
  Selectable for Priority and Round-Robin modes on all 4 arbitration levels
- **SUPPORTS ORDERLY SYSTEM SHUTDOWN**
  Provides early AC power fail notification
- **MONITORS SYSTEM OPERATION**
  Implements selectable watchdog timer and detects improper address conditions
- **PROVIDES ALL SYSTEM UTILITIES**
  Generates 16MHz system clock and 4MHz serial bus clock
- **VMEbus COMPATIBLE**

DESCRIPTION

The VMEbus System Controller Module is one of the fundamental building blocks in the Signetics Modular Board product family. It consolidates, in a single module, all of the bus arbitration, system utilities, and system monitors which the user finds needlessly replicated in other offerings. This implementation allows system designers the flexibility to utilize multiple Central Processing Modules, as their application dictates, without conflict or costly duplication of circuitry. The System Controller Module is particularly well suited to high performance microcomputer systems which require multiprocessing and intelligent DMA facilities.

This product has been specifically designed to provide system level functions for VMEbus based systems while complementing the proven reliability of the DIN connectors and DIN form factor. The System Controller Module provides user selectable options which give the system designer a high degree of flexibility in optimizing the system configuration for a variety of 8, 16, and 32-bit applications.

© IC MASTER 1983

SMVME1500 VMEbus SYSTEM CONTROLLER MODULE

BUS ARBITRATION

The System Controller Module includes all the circuitry necessary to support total bus arbitration in a VMEbus card cage. The arbitration protocol is user selectable for either Priority or Round-Robin modes of operation where the Priority mode grants preference to specific bus masters and the Round Robin mode uniformly distributes bus usage among several bus masters.

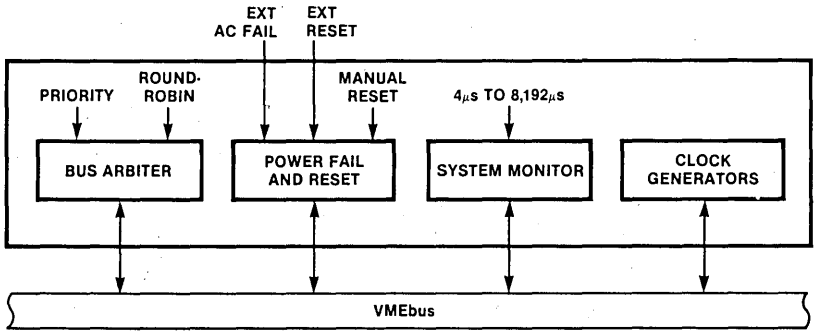
The Priority mode of operation is applicable in a multiple user system where some tasks need more access to the system resources than do others.

The Round-Robin mode of operation is applicable in a multiple user system where all tasks need relatively equal access to the resources of the system.

In either mode a new bus master typically gains control of the system bus within 100ns of release by its predecessor.

AC POWER FAIL AND RESET

In order for systems without battery back-up to support an orderly shutdown, advance notification of AC power loss is necessary. The System Controller module accepts an AC power loss signal as an input and generates the necessary VMEbus signals to allow an orderly and recoverable system shutdown to be implemented. System reset is coordinated with the AC FAIL signal or can be manually initiated by a switch located on the module or from an external source such as a front panel.



SYSTEM CONTROLLER MODULE

SYSTEM OPERATION MONITORS

Application software errors may occur in systems from time to time. These software errors often result in "system hang-up" due to the software accidentally attempting to access a non-existent module or attempting to access a module in an incorrect manner. To aid in recovering from these errors the System Controller Module contains a watch dog timer and address verification circuitry. The watch dog timer is user selectable for a range of timeout values from 4μs to 8,192μs in 12 steps by powers of 2 which, if exceeded, will notify the bus master of an error condition. The address verification function monitors the bus and notifies the bus master of an error condition if an illegal address combination occurs.

SYSTEM UTILITIES

The System Controller Module supplies the independent 16MHz system clock which is available for general clocking functions by other modules in the card cage. This product also supplies the serial bus clock which is required by systems utilizing the serial data communication channel for inter-module information exchange.

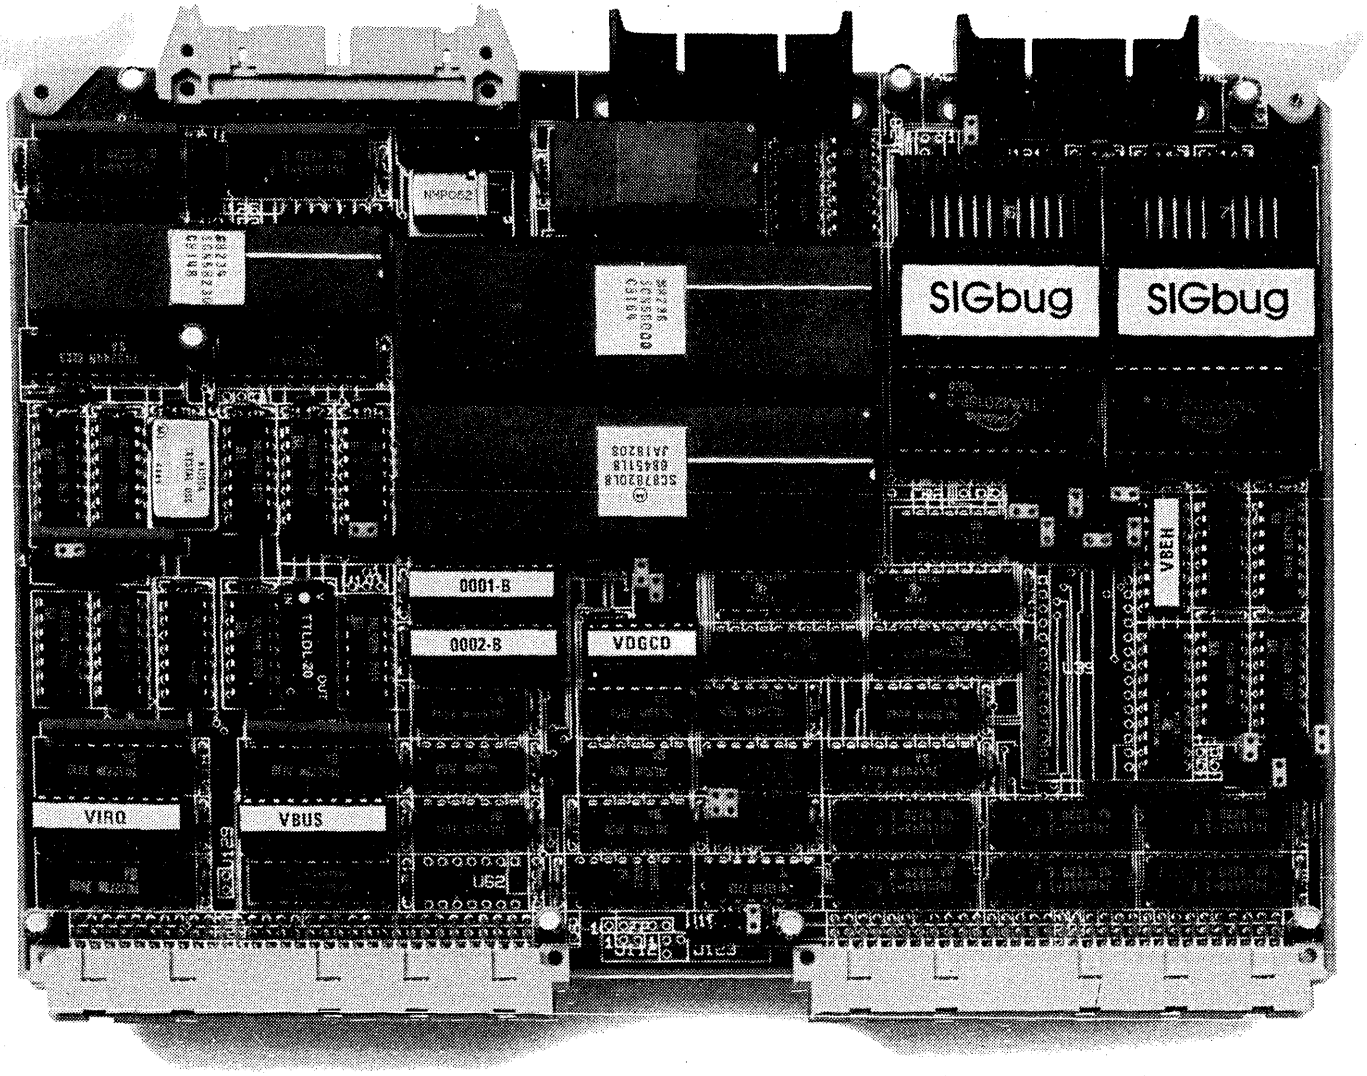
SMVME2000
VMEbus CPU MODULE

PRODUCT BRIEF
PRELIMINARY



FEATURES

- **8MHz SCN68000**
- **OPTIONAL MEMORY MANAGEMENT .SCN68451**
- **ON-BOARD MEMORY Up to 48Kb ROM-PROM-EPROM/8Kb RAM**
- **PERIPHERAL I/O PORTS 2 RS232 SCN2681/1-Parallel (SCN68230)**
- **PROGRAMMABLE REAL TIME CLOCK 1-24 bit timer**
- **7 LEVELS OF INTERRUPT**
- **VMEbus COMPATIBLE**

DESCRIPTION

The VMEbus Central Processor Module is one of the high performance building blocks in the Signetics Modular Board product family. It embodies, in a single module, a 68000 based computing function capable of supporting high speed data processing and control environments. This module is ideally suited for a wide range of applications. As a ROM based, single board computer, it is usable in a standalone application requiring no card cage or supporting modules. This provides the user with a compact computing nucleus for dedicated applications. The flexibility extends upward to include memory management for use in more general purpose, disc based, applications requiring multiprogrammed/multitasking solutions. All local I/O devices employ interrupt protocols for programming ease and fast response. This module is designed utilizing multilayer printed circuit techniques with internal power and ground planes in order to minimize noise and provide a reliable, industrial grade product. The Central Processor Module is easily configured to support a wide variety of applications.

© IC MASTER 1983

SMVME2000 VMEbus CPU MODULE

OPTIONAL MEMORY MANAGEMENT

Memory address translation and access protection are provided by the SCN68451 Memory Management Unit (MMU) for the entire addressing range of the SCN68000 CPU. The 16 megabyte address range is partitioned into 32 segments, where each segment can range from 256 bytes to 16 megabytes. The MMU can be bypassed for applications where a single, continuous address space is more appropriate.

CPU

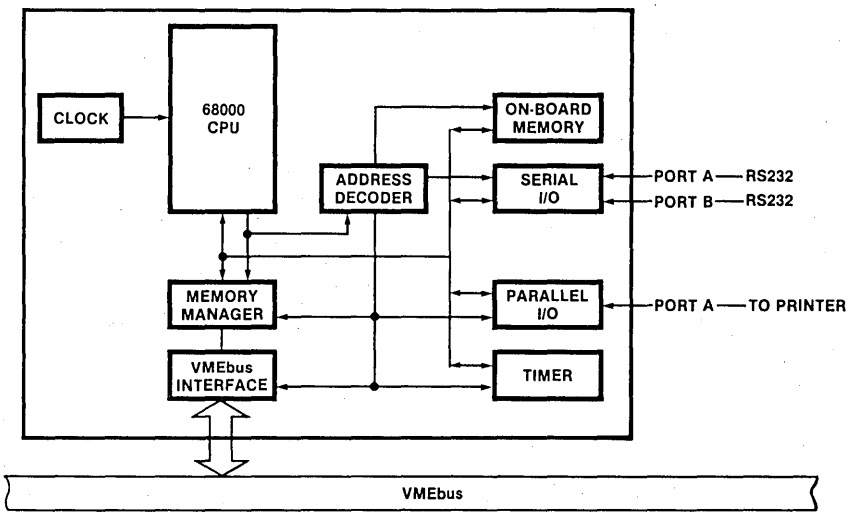
The Processor Module is available with a SCN68000 8MHz CPU. The CPU is configured to fully support up to 1,537 individual interrupting devices. This configuration will support the majority of the applications requiring high performance processing.

ON-BOARD MEMORY

The On-Board Memory is implemented as a local resource to the SCN68000 CPU and, therefore, is protected from other VMEbus modules. Three pairs of sockets are provided. Each pair of sockets are 28 pin JEDEC standard and have sufficient address and data lines for 16K words maximum. VMEbus battery back-up is selectable for each socket pair to support CMOS RAMs and the user can select the memory timing to appropriately match the memory devices used.

ADDRESS DECODER

A decoder PROM selects the on-board resources (Memory, Serial I/O, Parallel I/O, Timer). The PROM is socketed to allow the user the option of repositioning these devices in the address space.



CENTRAL PROCESSOR MODULE

I/O PORTS AND TIMER

Two serial ports are provided and supported by RS232 drivers and receivers. A Signetics SCN2681 DUART is employed. This device provides two independent, full duplex, asynchronous receiver/transmitter channels which are individually programmable for operating mode, data format, and baud rates from 50 to 38.4K.

A parallel port has been provided using a SCN68230 PI/T which is a general purpose, programmable parallel interface device. This interface is user configurable to select up to 16 bi-directional lines under local or external control. This port defaults to support a CENTRONICS printer interface. The SCN68230 also provides the 24-bit programmable timer function.

The timer is program selectable in numerous modes to provide flexible support as a real time clock and all I/O ports are implemented as local resources.

SYSTEM INTERRUPTS

The VMEbus CPU Module can respond to any or all of the seven priority levels of incoming interrupts from the VMEbus and on-board devices.

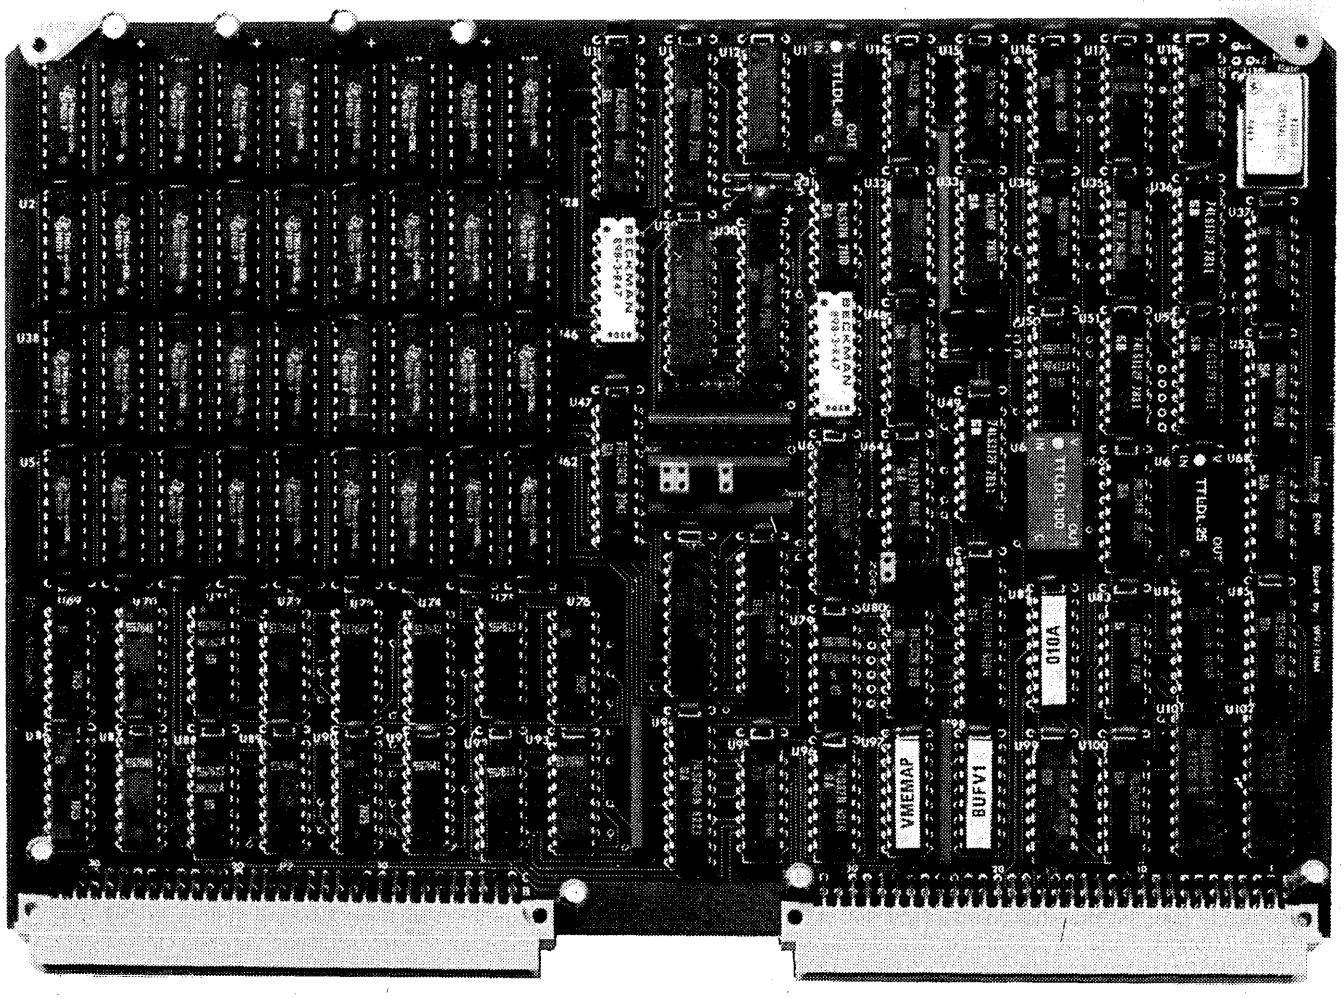
SMVME3100
VMEbus 256K MEMORY MODULE

PRODUCT BRIEF
PRELIMINARY



FEATURES

- **LARGE CAPACITY**
  256K bytes plus parity
- **FLEXIBLE DATA WIDTHS**
  Supports 8, 16, and 32 bit transfers
- **PROTECTION MECHANISMS**
  Selectable for supervisor access only
- **MODERN ARCHITECTURE**
  Supports 2-way interleaving
- **VMEbus COMPATIBLE**

DESCRIPTION

The VMEbus Memory Module is one of the high performance building blocks in the Signetics Modular Board product family. It provides, in a single module, 256K bytes of dynamic random access memory plus parity protection. This module was specifically designed to support 8 bit, 16 bit, and 32 bit data transfers automatically. This feature allows total software flexibility in mixed CPU systems and negates the need to replace memory modules in future system upgrades.

The Memory Module employs modern multilayer, printed circuit techniques with internal power and ground planes in order to minimize noise and provide a reliable, industrial grade product.

© IC MASTER 1983

SMVME3100 VMEbus 256K MEMORY MODULE

MEMORY ARRAY AND PARITY

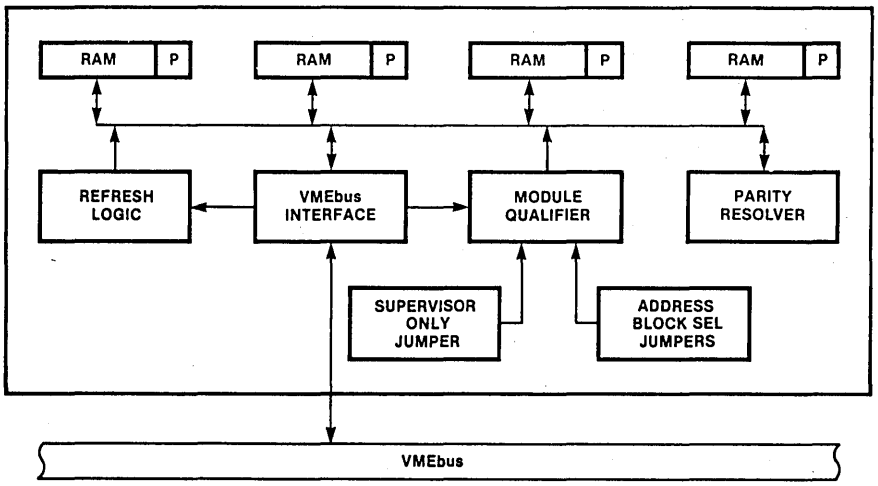
The 256K bytes of dynamic RAM are partitioned into four 64K byte arrays. Parity is generated or checked whenever an array is accessed on an array by array basis. In the D8 mode (byte transfer) only the appropriate array is accessed. In the D16 mode (word transfer) only the appropriate array pair is accessed. In the D32 mode (long word transfer) all arrays are accessed. In every case, the data byte from the accessed array is interfaced to its appropriate byte slot on the VMEbus data lines. Any parity error encountered will result in a bus error (BERR) being returned to the Master.

PROTECTION MECHANISMS

In order to support protected software methodologies, the user may select the supervisor only mode of operation. In this mode the module can only be accessed when the VMEbus address modifier field indicates a supervisor is initiating the access. All non-supervisor accesses will result in a bus error (BERR) return. The memory module may alternately be selected to the supervisor-user mode of access. In this mode the Memory Module will respond to either a supervisor or a user initiated access.

INTERLEAVING

The user may select 2-way interleaving in either the D16 or D32 mode. The effect of interleaving is to decrease the effective memory cycle time. Interleaving can provide a 50% to 100% memory thruput improvement depending on the application. The interleave is accomplished by steering sequential memory accesses to pairs of Memory Modules on an alternating basis. This allows a master (processor or DMA device) access to one of the module pairs while the other module is completing the present cycle and performing refresh. This feature requires Memory Modules using this mode to exist in pairs. The Memory Module is selectable for either D16 or D32 operation which is included specifically for the interleaving mode. Other Memory Modules residing in the VMEbus card cage which do not have the interleaving mode enabled are not affected.



MEMORY MODULE

ADDRESS BLOCK

The Memory Module provides user selection on any 256K byte boundary in the 16M byte address space.

REFRESH LOGIC

The memory arrays are refreshed in one of two modes. The primary mode is to perform a refresh immediately after a memory access cycle (often referred to as "hidden refresh"). In the backup mode, if no memory access occurs for 8 microseconds, the module then "forces" a refresh by self initiating a refresh cycle.

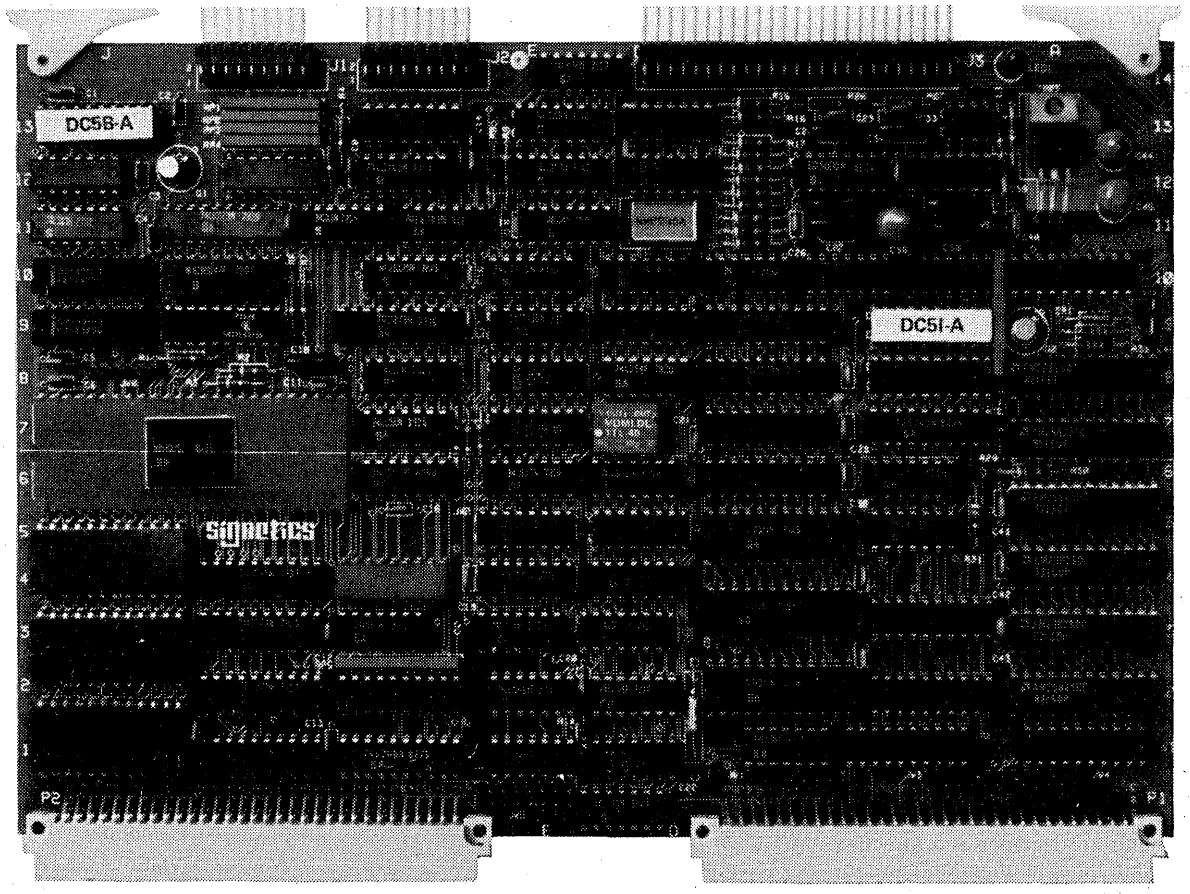
SMVME4300
VMEbus DISK CONTROLLER MODULE

PRODUCT BRIEF
PRELIMINARY



FEATURES

- **MIXED MEDIA MASS STORAGE CONTROL**
  Supports up to 4 5 1/4″ and 8″ Winchester and floppy disk drives per module
- **BUS MASTER**
  DMA between main memory and disk drives controlled by an on-board Signetics 8X305 bipolar microprocessor
- **FLEXIBLE FORMATS**
  IBM standard or user defined
- **ERROR RECOVERY MECHANISMS**
  Error correction and detection built-in
- **VMEbus COMPATIBLE**

DESCRIPTION

The VMEbus Disk Controller Module is another addition to the high performance building blocks in the Signetics Module Board product family. It contains in a single module, a high speed microprocessor supervised disk controller which interfaces to the industry's most popular hard and floppy disk drives. The Disk Controller Module provides a high performance data channel between multiple disk drives and the VMEbus system main memory. Intended as an intelligent peripheral interface, the Disk Controller includes a straight forward, high level interface to the system software by utilizing device control block (DCB) and direct memory access (DMA) protocols. Designed utilizing multi-layer printed circuit techniques with internal power and ground planes to minimize noise, the Signetics Disk Controller Module provides a reliable, industrial grade product.

© IC MASTER 1983

SMVME4300 VMEbus DISK CONTROLLER MODULE

MICROCONTROLLER

Intelligence for the Disk Controller Module is provided by a Signetics 8X305 low power Schottky microcontroller operating at 200ns per instruction. The 8X305 and associated support devices provide all data handling, DMA, disk drive, and error correction and control functions.

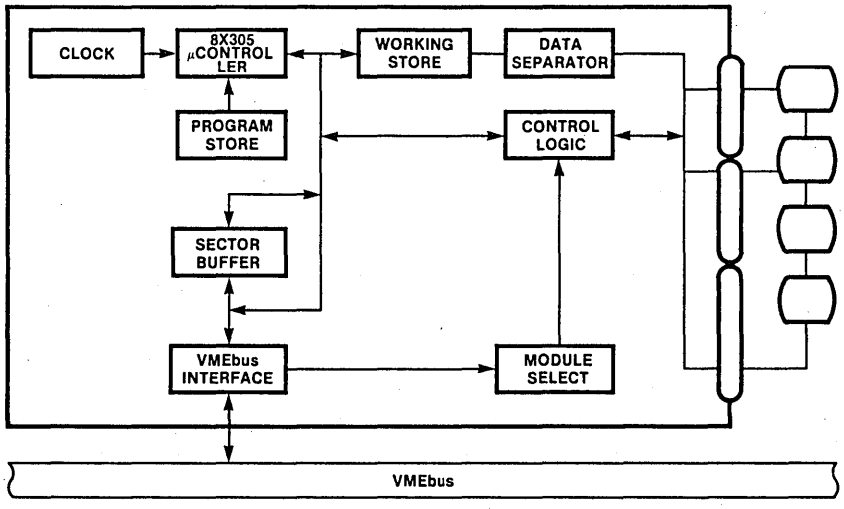
DISK DRIVE INTERFACE

Up to 4 disk drives in mixed configuration are supported. Of the 4 drives, up to 2 drives can be Winchester type 5 1/4" or 8" hard disks. Floppy drives, 5 1/4" or 8", single or double density, single or double sided are supported in any mix but hard drives can only be mixed if they provide the same data transfer rate.

All head positioning (up to 1024 cylinders/drive) and head selection (up to 16 heads/drive) is automatically provided by the Disk Controller in response to a high level command from the VMEbus system software. Serial data rates up to 8 Mbits/sec are supported.

DATA INTERFACE

Data is automatically transferred between any of the 4 disk drives and main memory for read and write operations. The read/write buffers may be located anywhere in the 16 megabyte main memory address space. Transfers can occur in the word (16-bit) or byte (8-bit) mode with odd byte boundary discontinuities automatically compensated for. Data is transferred directly for floppy type disks and buffered for hard disks in a 1024 byte on-board buffer. Multiple sector read/write is supported with automatic head switching and cylinder positioning as necessary.



DISK CONTROLLER MODULE

ERROR DETECTION/ CORRECTION

The user may choose either CRC-16 or ECC-32 to provide data integrity validation. For CRC-16 a data error will be flagged and status returned to the system software. For ECC-32, burst errors of up to 11-bits/sector are automatically corrected and indicated in the return status at the completion of the operation.

COMMAND SET

Read sector(s) with overlapped seek
Write sector(s) with overlapped seek
Write deleted data
Format a track
Read a track
Restore and Recalibrate (to track 0)
Read record ID
Read sector (transparently)

SMSFT51970
SIGbug MONITOR

PRODUCT BRIEF
PRELIMINARY

FEATURES

- **2764 EPROM Resident VMEbus System Debug Monitor**
- **More than 30 commands for debug**
- **Single line assembler/ disassembler for ease of program modification**
- **Full speed execution of system and user developed programs operating in the VMEbus system environment**
- **Virtual terminal capability for upload/download from a cross development host computer**
- **Powerful software and system debug command set allows access to all VMEbus I/O, control and memory facilities plus the full 16M byte direct address range of the 68000 processor**
- **Includes all required installation and operation documentation**

DESCRIPTION

SIGbug is an EPROM-based resident package ready for installation and immediate use with any Signetics VMEbus CPU installed in a VMEbus-based backplane.

SIGbug provides a powerful evaluation and system debugging tool for VMEbus systems. The 2764 EPROM-based package will operate in 16K bytes of ROM space. SIGbug uses the first 1024 words of system RAM storage for interrupt vectors and temporary storage. The package permits full speed execution and control of system and user developed programs in a Signetics VMEbus system environment. SIGbug may be utilized with a VMEbus CPU board or an entire VMEbus system in a stand alone environment with only a user provided standard RS-232C asynchronous ASCII terminal required as additional equipment. Alternately, it may be used with a second serial I/O port connected to a host computer for up/downline loading of programs in Motorola "S" record format. When connected to a host computer in this manner, the SIGbug console terminal appears as a normal asynchronous ASCII terminal to the host operating system. The second serial I/O port, the host computer interface, would be implemented through the second asynchronous serial I/O port provided on the CPU board.

© IC MASTER 1983

SMSFT51970 SIGbug MONITOR

OPERATIONAL DESCRIPTION

In a typical debug session, the user will download his program to a Signetics VMEbus-based system from the host computer used for software development. After loading, SIGbug commands may be used to examine and modify memory, set breakpoints to control program execution, and track program progress. The user may set up and examine a variety of conditions using any of the powerful commands listed in the table to the right, such as the register display/set series and the memory manipulation commands. The data conversion command serves as an aid in examining and modifying data by converting hexadecimal to decimal, and decimal to hexadecimal. If corrections or program patches are required, these may be performed and checked in the Signetics VMEbus-based board system. The user may save a corrected copy on the host computer file by using the memory dump command for upline load. Creating program patches may be aided by use of the display offsets command to assist with relocatable and position-independent code. The user may also obtain hard copy of all traffic to the SIGbug console terminal on a printer attached to the parallel port by use of the attach printer command. This may be useful for desk debugging following a debug session. The Centronics parallel printer interface is implemented through the CPU board parallel I/O facility.

The user may communicate with the host computer as a terminal for purposes other than up/downline load by executing the transparent mode command or the "send message to port 2" command. By using the port format command, the serial port may be reconfigured for such attributes as baud rate, stop bits and number of data bits. In the transparent mode, the two serial ports must operate at the same baud rate.

SIGbug may be used for debug in total systems environments which include other VMEbus compatible boards.

FEATURES

- Real-Time Multitasking Capability
- Task Scheduling Based on Task Priority Levels (0-255)
- Task Synchronization Capability Using Semaphores
- Resource Sharing Using Semaphores
- Support For Any Number of Tasks
- Inter-Task Communication
- Server Task Capability
- Memory Management and Allocation
- Fast Interrupt Response
- Serial, Parallel, and Disk Drivers Included
- Exception Monitoring Facility
- System Generation on Several Host Computers
- Trace Table Capability to Ease Debugging of System
- System Initialization Capability
- ROM or RAM Based

DESCRIPTION

The Signetics S68000 Real-Time Multitasking System Software, RMS68K, is a multitasking kernel around which real-time application systems can be built. The powerful and universal characteristics of RMS68K allow a wide variety of application systems without large expenditures for design and programming effort on the complex real-time and multitasking functions.

RMS68K can be used in systems which are built around the Signetics VMEbus board modules or in customer designed hardware incorporating the SCN68000 microprocessor.

See Page 1979 for Ordering Information.

© IC MASTER 1983

S68000 TARGET SOFTWARE RMS68K REAL-TIME MULTITASKING SOFTWARE

REAL-TIME SYSTEM CONCEPTS

A real-time system responds to external events as they occur. Since the precise time of these external events is an unknown factor, a real-time system is said to execute asynchronously.

Unlike a batch system where one operation is started, a real-time system can delay the completion of one operation in order for another operation to be started, continued, or completed. This mechanism (where more than one operation is in progress at a given time) is called concurrent processing. Even though only one operation can be executed at a given time using a single central microprocessing unit, the concurrent processing mechanism of a real-time system gives the illusion of several operations executing simultaneously.

A real-time application system can be broken down into several tasks. A task is a function (or operation) which can execute concurrently with other tasks/functions. A task can be written to process a single type of event, or it can process more than one type of event.

RMS68K FUNCTIONS

RMS68K is comprised of a task controller, an inter-task communication facility, an optional memory management facility, and an initialization facility. These facilities provide the following functions:

- Receive all hardware and software interrupts and dispatch them to the proper task for processing
- Dispatch tasks competing for use of the microprocessing unit
- Provide inter-task communication and synchronization
- Manage and allocate memory
- System initialization capability
- Diagnostic feedback during error conditions

RMS68K STRUCTURE

RMS68K is structured in six levels or layers (see Figure 1), with each level performing a particular range of functions.

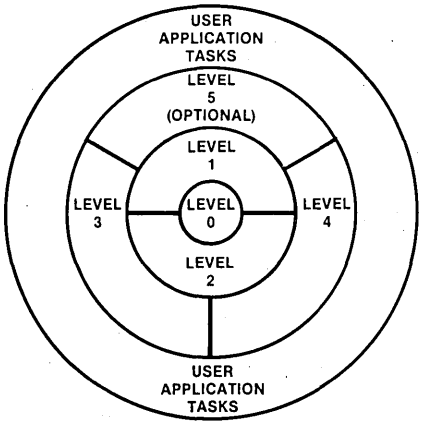

Figure 1 — RMS68K Functional Levels

Level 0 supplies processor management functions including task dispatching, primitive synchronization, exception handling and interrupt dispatching.

Level 1 supplies physical memory management functions.

Level 2 supplies utility functions.

Level 3 supplies task address space and memory segment management functions.

Level 4 supplies task creation, deletion, and execution controlling functions.

Level 5 (an optional layer of RMS68K) provides the channel-oriented, physical I/O functions.

The functions provided by Levels 3, 4, and 5 are directly available to user tasks. The functions provided by Levels 0, 1, and 2 are not directly available to user tasks, but provide support to Level 3, 4, and 5 functions. This multi-layering allows changes to be made within Levels 0, 1, and 2 without affecting the user interface to RMS68K.

User tasks can request RMS68K to perform Level 3, 4, or 5 functions by using executive directives. An executive directive contains all of the information needed by RMS68K to perform the desired function.

MEMORY REQUIREMENTS

RMS68K is supplied in two parts—one part is the Level 0 through 4 software; the other part is optional Level 5. The maximum memory requirements are given in Table 1. The user may elect to exclude certain functions in his particular application system, which would decrease memory requirements.

APPLICATION HARDWARE REQUIREMENTS

The hardware requirements for an RMS68K based application are:

- SCN68000 microprocessor
- Appropriate memory
- Optional real-time clock

The amount of memory required will vary from one application to another, depending upon the environment, user supplied code and data and the RMS68K functions configured in the user system. The maximum memory required can be decreased by including only the necessary RMS68K functions in the system.

If the system is to use the delay task and periodic task activation functions of RMS68K, a real-time clock must be provided. This can be accomplished by means of a software clock mechanism that the user configures as part of RMS68K, or by means of a hardware device such as the Signetics SCN68230 Parallel Interface and Timer.

The requirements listed may be satisfied through use of the Signetics VMEbus CPU module or a user designed SCN68000 microcomputer based board.

TASK CONTROL

Associated with each task existing in the system is a task control block (TCB). The TCB contains information about the task which allows RMS68K to maintain control of the task's execution, account for resources allocated to the task, and ensure task protection. The TCB remains asociated with one task throughout that task's existence.

Table 1 — RMS68K Memory Requirements

FUNCTION	RAM (Parameter Data)	ROM/RAM (Program Code)
Level 0 through Level 4	800 bytes	12K bytes
Level 5	See note below	4.5K bytes

NOTE: Dynamic system tables created by levels are not included

S68000 TARGET SOFTWARE RMS68K REAL-TIME MULTITASKING SOFTWARE

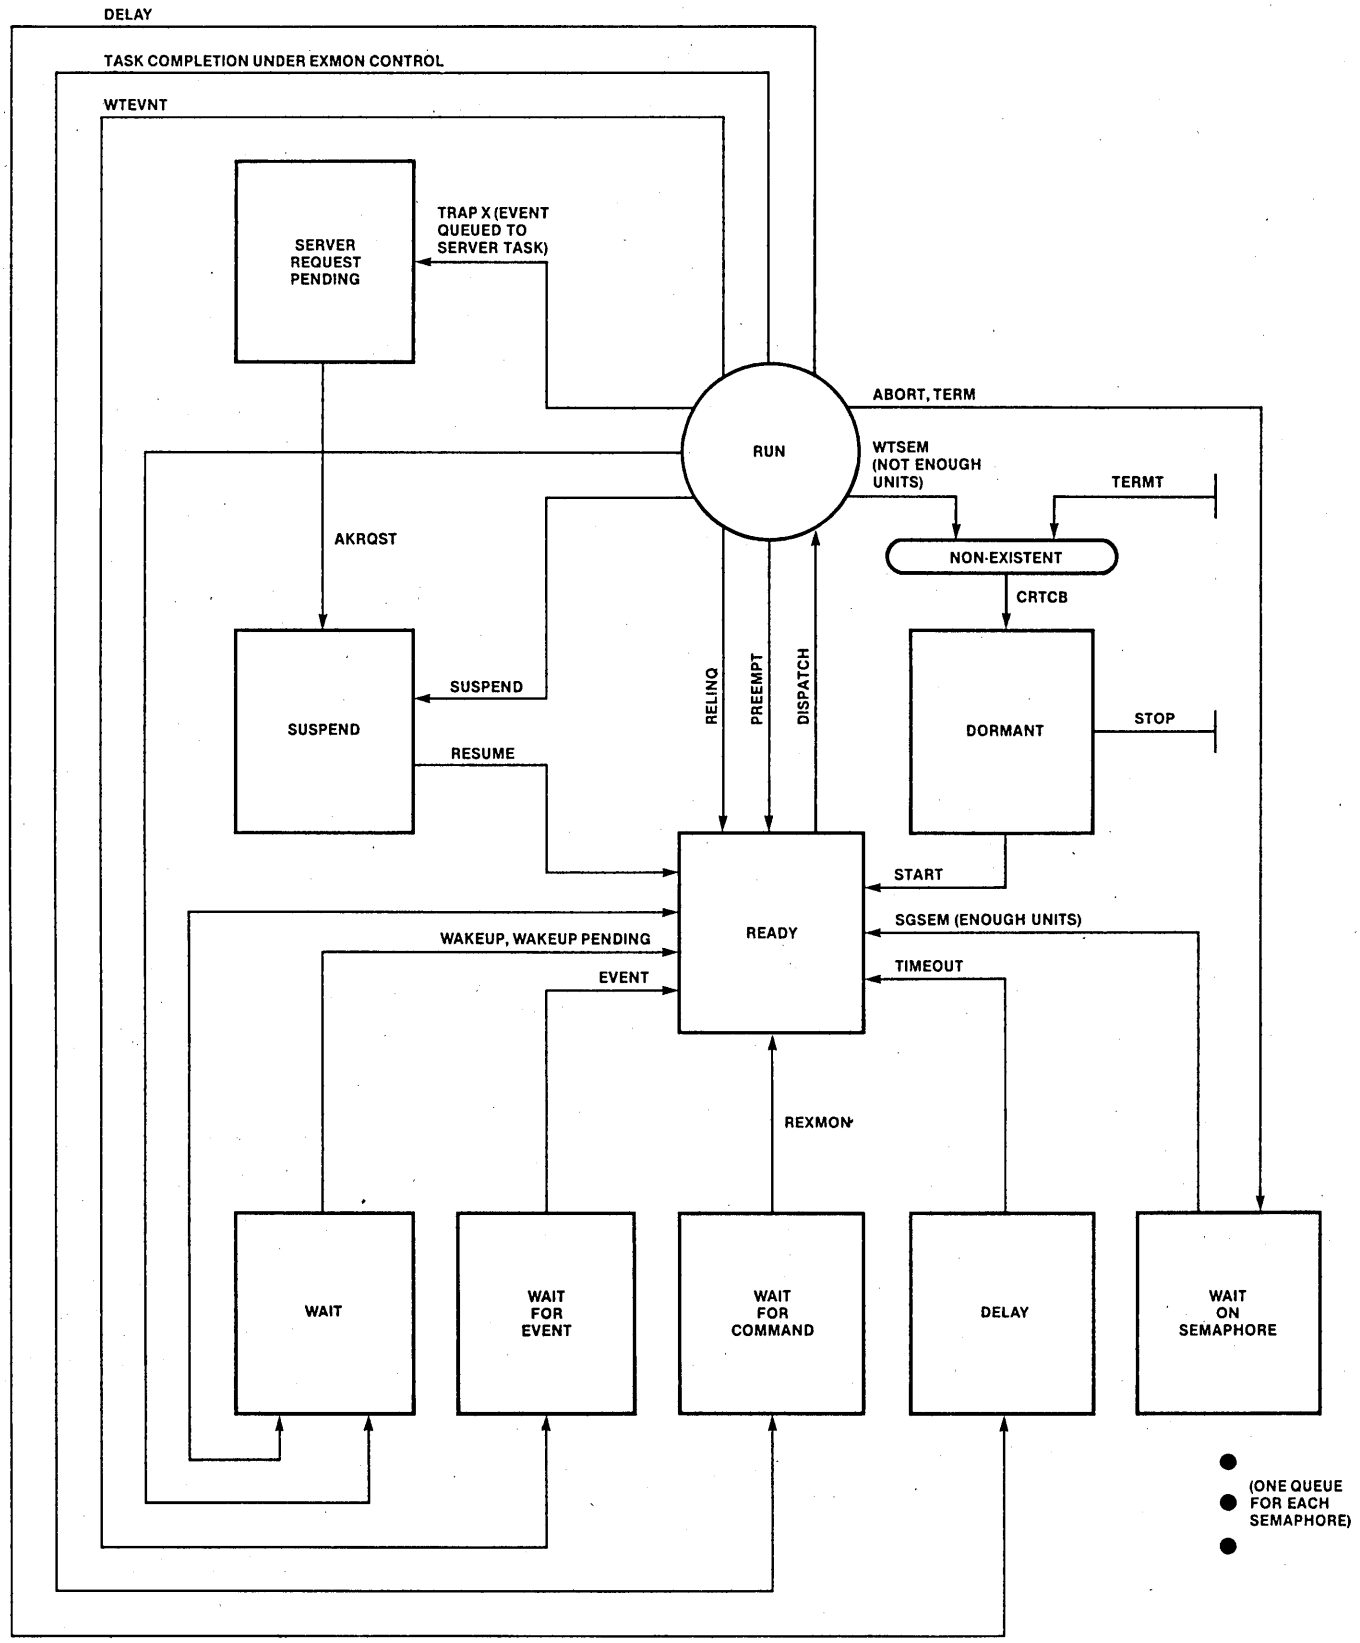

FIGURE 2 — RMS68K Task State Transition Diagram

Signetics

See Page 1979 for Ordering Information.

© IC MASTER 1983

S68000 TARGET SOFTWARE RMS68K REAL-TIME MULTITASKING SOFTWARE

A task can make a transition from one state to another when any of the following actions take place:

- A task control directive is issued by task while it is in the running state
- A task control directive is issued by another task while it is in the running state
- An event is placed in the task's asynchronous service queue
- An exception occurs in the task while in the running state
- Special function handling is initiated by RMS68K (such as timeouts, semaphore signaling, interrupt handling)

TASK MANAGEMENT

Task management is one of the broad functional areas of RMS68K. Levels 3 and 4 of RMS68K software provide this task management function. This task management functional area can be broken down into several smaller service areas:

1. Memory allocation and management
2. Task state control
3. Task event control
4. Task synchronization
5. Special function task control
6. Interrupt service management

There is a set of task management directives which tasks can use to request the performance of task management services by RMS68K.

1. Memory Allocation And Management Directives

A list and brief description of all the directives in the memory allocation and management category:

GTSEQ Allocate a new program code of data memory segment to the target task by placing it in the task's address space

DESEG Delete a program code or code memory segment from the target task

GTASQ Allocate an asynchronous service queue (ASQ) to the target task

DEASQ Deallocate the requesting task's ASQ

DCLSHR Make a memory segment available for shared access

ATTSEG Place an existing memory segment (shareable) into the requesting task's address space.

SHRSEG Place an existing memory segment (shareable) to another task's address space

TRSEG Remove a memory segment from the requesting task's address space and place it in the address space of another task

RCVSA Return a description of the specified segment to the requesting task

2. Task State Control

Directives are provided to control task execution by means of moving a task through various states. A task can control its own state transitions or another task's state transitions. Following is a list and brief description of each of the directives in the task state control category:

CRTCB Create a task control block (TCB) for a new task and place the task in the DORMANT state

START Move the target task to the READY state

TERMT Terminate task by releasing resources and deleting the TCB of the target task so that the task no longer exists in the system

STOP Move the target task to the DORMANT state

RESUME Move the target task from the SUSPEND state to the READY state

WAKEUP Move the target task from the WAIT state to the READY state

ABORT Initiate a task's own abnormal termination. Its TCB is deleted and the task no longer exists in the system

TERM Initiate a task's own normal termination. Its TCB is deleted and the task no longer exists in the system

SUSPND A task moves itself into the SUSPEND state

WAIT A task moves itself into the WAIT state

RELINQ A task moves itself to the READY state so that RTEX can perform a dispatch cycle

SETASQ A task changes the status of its ASQ and/or ASR

DELAY A task moves itself to the DELAY state for a specified period of time

WTEVNT A task moves itself into the WAIT-FOR-EVENT state until an event is placed in its ASQ

SETPRI A task changes its own priority or the priority of another task to the specified value

RQSTPA A task requests the timed periodic activation of itself or another task

EXPVCT A task announces the handling of its own exceptions

TRPVCT A task announces the handling of its own trap instructions

3. Task Event Control

These directives can be used by a task for event queueing and event servicing:

QEVNT An event is placed into the ASQ of the target task

RDEVNT The next event in the requesting task's ASQ is moved into the task's receiving area

RTEVNT Return to the point of interruption of a task upon completion of that task's ASR processing

4. Task Synchronization Directives

Tasks can use semaphores to synchronize activities and control resources. Several task synchronization directives, which tasks can use to control these semaphores, are available.

ATSEM A task attaches to a semaphore and acquires use of that semaphore. The semaphore is created and given an initial signal count if it does not already exist

CRSEM A task creates a new semaphore or resets the initial count of an existing semaphore

SESEM A task releases use of a semaphore

DESEMA A task releases use of all semaphores to which it is attached

WTSEM A task requests and, if necessary, waits for semaphore-controlled access or execution to be granted

SGSEM A task signals release of a semaphore controlled resource or execution

5. Special Function Task Control

The directives in this category are used to control server tasks and exception monitor tasks.

Server Task Control —
A server task is able to receive and process requests from any task in the system. A user task issues a request to a server task by executing a TRAP instruction: thus, a server task appears to function as part of RMS68K.

© IC MASTER 1983

See Page 1979 for Ordering Information.

S68000 TARGET SOFTWARE RMS68K REAL-TIME MULTITASKING SOFTWARE

SERVER A task establishes itself as a server task

AKRQST A server task acknowledges receipt or completion of a request by placing the requesting task into an appropriate state

DERQST A server task controls the receipt of requests for service

DSERVE A server task initiates orderly shutdown of service

Exception Monitor Task Control —
An exception monitor task provides execution control over a target task or emergency processing when a task fails. Exception events which will cause a target task to stop execution and notification to be sent to the target task's exception monitor task are specified in an exception monitor mask associated with the target task. An exception monitor task can also control the operation of a target task in a trace mode.

EXMON A target task becomes associated with an exception monitor task

DEXMON A target task detaches from an exception monitor task

EXMMSK Events of interest to an exception monitor task are specified

RSTATE An exception monitor task receives the current state of one of its target tasks

PSTATE An exception monitor task sets the current state of one of its target tasks

REXMON A target task executes as directed by an exception monitor task

6. Interrupt Service Management

A task can include one or more routines which are activated as the result of an external interrupt (or exception) and execute in the SCN68000 user hardware state at the priority level of the interrupt. Such a routine is called an interrupt service routine (ISR). This mechanism is useful in creating I/O device drivers.

CISR A task configures one of its ISR's to respond to a particular exception

SINT A task simulates an exception (interrupt)

RTE An ISR returns from execution

Miscellaneous RMS68K Functions

Thee are some miscellaneous RMS68K functions which do not fit into the categories discussed in the preceding paragraphs.

STDTIM A system task sets the system date and time

GTDTIM A task gets the current system date and time

MOVELL A task moves date from one logical address to another

PHYSICAL I/O HANDLERS

User tasks running under the control of RMS68K can use the Level 5 portion of RMS68K to interface with standard Signetics memory mapped I/O channels. The Level 5 software consists of a channel management request (CMR) handler and two I/O handlers. The CMR handler logically manages channels, and I/O handlers perform the actual physical I/O. A user device driver task could then be reduced to a processor of the I/O data, and would not have to perform the device management and actual data transfer functions.

The CMR handler and I/O handlers perform extensive validity checks to ensure address space protection against the user device driver tasks. The validity checks allow these device driver tasks to execute in the SCN68000 "user" hardware state.

Alternate methods include writing a device driver as an interrupt service routine (ISR) or as an extension of RMS68K which executes in the supervisor state.

CHANNELS

A channel is considered to be a single contiguous portion of memory mapped I/O space, associated with one or more types of interrupts. A single device may cause an interrupt under two or more different conditions. Up to four types of interrupts for that device could be associated with a single channel. The types of interrupts associated with a channel are defined when the channel is allocated. At least one type of interrupt must be defined to a channel.

Channels are classified into two main types: intelligent peripheral controller channels (IPC) and non-IPC channels.

CMR HANDLER

User task interactions with channels are performed through requests made to the channel management request (CMR) handler. The following CMR functions are available:

ALLOCATE Define a channel to the system

DELETE Remove a channel definition from the system

ATTACH Establish a logical connection between a task and a channel

DETACH Dissolve the logical connection between a task and a channel

PUT ON LINE Remove a channel from off line status, making it available for subsequent CMR ATTACH requests

TAKE OFF LINE Put a channel into off line status, making it unavailable for CMR ATTACH requests until a PUT ON LINE request is made

INITIATE Invoke the appropriate I/O handler which will perform the actual I/O

HALT Terminate the I/O in progress on a channel

RESET Reset interrupts on an IPC channel after an error

NON-IPC HANDLER

The non-IPC handler is invoked when a device driver task makes a request to the CMR handler to initiate I/O on the non-IPC channel. The I/O handler then interpretively executes a sequence of channel commands supplied by the driver task. These channel commands contain all of the device-dependent information required to operate the channel.

The non-IPC I/O handler manages four distinct memory spaces for each channel attached to a driver task. This distinction in memory spaces helps to protect the address spaces since the device driver task does not need direct access to all of the spaces. Only the I/O handler has access to all four memory spaces; i.e., memory mapped I/O space, command space, buffer space and transient space.

ICP I/O HANDLER

The IPC I/O handler is invoked when a device driver user task makes a request to the CMR handler to initiate I/O on an IPC channel. The I/O handler will accept one command packet from the user task, send the command packet to the IPC, supply the user task with an acknowledgment when the command packet has been accepted by the IPC, and inform the user of I/O completion. Essentially the IPC I/O handler performs the handshaking functions with the IPC.

The IPC I/O handler manages three distinct memory spaces for each channel attached to an IPC device driver task. These three memory spaces are: memory mapped I/O space, command space, and buffer space.

See Page 1979 for Ordering Information.

KTM-3

Keyboard Terminal Module

Features

- 110 to 19.2K Baud
- Choice of Character Screen Sizes:
  24 x 80 Character Screen Size (KTM-3/80)
  24 x 40 Character Screen Size (KTM-3/40)
- 7 x 9 Character Matrix in 8 x 10 Field
- Typewriter Style Keyboard — 58 Keys
- CAPS LOCK Key
- Upper and Lower Case Alphanumeric Character Set with Descenders
- Generates and Displays 128 ASCII Characters
- Full and Half Duplex with Modem Controls
- Built-in Power Supply with On/Off Switch
- Scrolling
- Blinking Cursor
- Full Cursor Control
- Absolute and Relative Cursor Positioning
- Clear to End-of-Screen, End-of-Line
- Even, Odd, or No Parity
- One or Two Stop Bits
- Framing and Parity Errors Displayed
- Auto Key Repeat
- Debug Mode (Displays Control Characters)
- Cables Included
- Built-in Diagnostics
- KTM-3/40 Will Attach to Standard TV Set Using RF Modulator
- 50/60 Hz Operation
- 220 Volt Version Available

Description

The KTM-3 uses the latest LSI technology with two microprocessors to provide a highly reliable, ready-to-use terminal minus the CRT monitor. The dual microprocessor design is highly cost-effective with great flexibility, providing more features at lower cost than other approaches used today. For volume usage, Synertek Systems can customize the KTM-3 to your O.E.M. specifications.

The display interface provides composite video output and complete video control including scrolling, full cursor control, and absolute and relative cursor positioning. A choice of screen sizes is offered — either 24 x 40 characters, or 24 x 80 characters.

The unit is now in stock and available from your local distributor.

MBC020-65
MBC020-68

Single Board Computer/ Video Board

Motorola and System 65 Compatible

Features

- 6512 Microprocessor — MBC020-65
- 1 MHz Crystal Controlled Clock Frequency
- Fully Buffered Data and Address Lines
- 3072 Bytes of Static RAM
- 4 ROM/EPROM Sockets that Accept 2716, 2732, 2316, 2332, 2364
- ACIA (6551) for RS-232 Serial Inteface: Crystal Controlled Programmable Baud Rate
- VIA (6522) Provides 20 I/O Lines and Two 16-Bit Counter/Timers
- Power-On Reset
- Reset Switch
- Refresh Control Logic for Dynamic RAMs
- Control Logic for DMA
- Seven Lines Optionally Buffered for Input or Output
- Full 64K Programmable Memory Map in 2K Increments Using 32 x 8 Bipolar PROM
- Single +5V Operation Using TTL Levels for RS-232. Jumper Option to Use ±12V for Full RS-232 Compatibilty
- Available with 6800 Microprocessor — MBC020-68

Video Features

- Incorporates Complete Video Interface Circuitry to Attach Directly to Video Monitor
- Composite or Separate Sync, Video Output
- Dual Intensity Video Levels
- SY6545 Programmable CRT Controller for User Definable CRT Screen Formats
- SY2316 Character ROM — Compatible with 2716 EPROM
- Light Pen Input
- Displays up to 25 Lines of 80 Characters (Programmable)

Description

The MBC020 provides a complete computer on a single board, including the video interface. In addition, the MBC020 is fully compatible with the Motorola EXORcisor™ and the micromodule buses, and supports all RAM, I/O, and analog boards in those families. The board may be used as a cost effective alternative CPU board, as an SBC or, with the video circuitry, the MBC020 can replace two or more boards and operates as a complete system.

Specifications

Power Requirements
+5 VDC @ 1.9A (max)
+12 VDC @ 50A (max)
-12 VDC @ 50 mA (max)

Bus Signals
Address Bus:
Three-state TTL-compatible buffered outputs
Data Bus:
TTL-compatible buffered inputs/outputs
Control Bus:
R/W, VMA, VUA: Three-state TTL-compatible buffered outputs
BA, REF GRANT, MEMCLK, SYNC, Baud Rate: TTL-compatible buffered outputs
$\overline{IRQ}$, $\overline{NMI}$, $\overline{RESET}$, Halt, $\overline{REF}$ $\overline{REQ}$, $\overline{RDY}$, $\overline{DMA}$: TTL-compatible buffered inputs with 3.3K ohm pull-up resistors
ϕ_1, ϕ_2,: TTL-compatible outputs

Operating Temperature
0°C to +55°C

Physical Characteristics
Width: 9.75 in.
Height: 6.00 in.
Board: 0.062 in.

Connectors
86 pins: Stanford Applied Engineering SAC-43 D/1-2
50 pins: 3M type 3415-0001
20 pins: 3M type 3461-0001

MBC01A2/MBC01A2-1

Single Board Computer Motorola Micromodule Replacement

Features

- Exact Replacement for Motorola M68MM01A2 Micromodule with additional RAM and ROM capacity
- EXORcisor™/Micromodule Bus Compatible
- Serial Communication Port using MC6850 ACIA with RS-232-C interface
- Four Parallel Ports using MC6821 PIAs
- 1 MHz operation (2 MHz available on special order)
- 1024 Bytes of Static RAM with Sockets for up to 4096 Bytes total
- Four ROM/EPROM/RAM Sockets for interfacing with 1K-8K ROM's; 1K-4K EPROMs; or compatible 1K and 2K RAM's
- Power-On Reset Circuitry
- Dynamic Memory Refresh Circuitry
- Four mating connectors supplied with MBC01A2-1

Description

The MBC01A2 board is a direct replacement for Motorola's M68MM01A2 Micromodule. Additional ROM and RAM capacity has been added for increased system requirements. Up to 4096 bytes of static RAM and 32K bytes of ROM can be utilized on the MBC01A2 Micromodule.

The MBC01A2 Micromodule includes a serial communications interface using the MC6850 and two MC6821 PIA's for parallel interfacing.

MBC016D/MBC048D
MBC032D/MBC064D
Dynamic RAM Boards

Features

- Available in 16K, 32K, 48K or 64K Memory Arrays
- 1 or 2 MHz Versions
- Hidden Refresh (without processor interruption)
- Fully Buffered Address, Data, and Control Lines
- Any 4K Block Memory can be Deselected by Jumpers
- 20 Pin Header for Implementation of Priority Interrupts, Multi-Paged Memory, and I/O Systems
- Even Parity Error Checking with Jumper Selectable Output
- Power Saving Selective Refresh During $\phi 1$ of Every Foruth Processor Cycle

Description

The Dynamic RAM Boards with hidden refresh are available in 16K, 32K, 48K, and 64K memory arrays in either 1 or 2 MHz versions. Memory refresh is performed on-board during $\phi 1$ when the processor is not accessing memory. On-board circuitry generates and detects even parity througth the use of an additional memory bit. Whenever a parity error is detected, a signal is output to the system which is jumper selectable as a parity error or non-maskable interrupt. The memory array can be deselected in 4096 byte blocks to meet any system requirements. As with all SSC Micromodules, the Dynamic RAM Boards are directly compatible with Motorola EXORcisor™-/Micromodule bus.

Specifications

Power Requirements (64K of RAM)
+5 VDC @ 0.7A (max)
+12 VDC @ 0.12A (max)
-12 VDC @ 8 mA (max)

Operating Temperature
0°C to +70°C

Physical Characteristics
Width: 9.75 in.
Height: 6.00 in.
Board Thickness: 0.0625 in.

Connectors
86 pin:
Stanford Applied Engineering
SAC-43D/1-2 or equivalent

Read Access Time
2 MHz operation —
210 ns after leading edge of $\phi 2$
1 MHz operation —
350 ns after leading edge of $\phi 2$

Write Data Available
2 MHz operation —
110 ns after leading edge of $\phi 2$
1 MHz operation —
220 ns after leading edge of $\phi 2$

BURR-BROWN®

Everything You Need For Precision Data Acquisition

Data Conversion/Data Acquisition

Analog-to-Digital Converters
8-, 10-, 12-, 16-bit; conversion times to 880nsec
Digital-to-Analog Converters
10-, 12-, 16-bit, linearities to ±0.00075% FSR
Voltage-to-Frequency Converters
0 to 1MHz; linearities to ±0.005% FSR
Data Acquisition Systems
Complete function in one IC package
Microprocessor Interfaced Data Acquisition Systems
Analog Input/Output Systems
Interfaced directly to μP bus
Sample/Hold Circuits – High speed - accurate
Multiplexers – To 16 channels - fast settling

High Performance Operational Amplifiers

General Purpose - FET, bipolar and wide temp range models
Low Drift – As low as 0.1μV/°C
Low Bias Current – To 75fA - voltage drift to 2μV/°C
Low Noise – Guaranteed noise spectral density
Wide Bandwidth – Cost effective wideband op amps
High Voltage – Outputs to ±145V
High Current – Outputs to ±5A peak
Unity-Gain Buffer
Versatile power boosters with impedance buffers

Instrumentation and Programmable Gain Amplifiers

Instrumentation – Accurately amplify low level signals
Programmable Gain
Digitally set gains cover wide dynamic input signal ranges

Isolation Products

Transformer-Coupled Amplifiers
Signal and power isolation in one IC package
Optically-Coupled Amplifiers
Excellent linearity - gain independent of LED output level
DC/DC Converters
1, 2, 4 output channels with high voltage isolation

Analog Circuit Functions

Multipliers/Dividers – Laser-trimmed to 0.25% accuracy
Dividers – High accuracy over wide signal range
Special Functions
Log ratio and logarithmic amps, rms-to-DC and multifunction converters, window and level comparators, peak detectors
Frequency Products – Oscillators and active filters

Modular Power Supplies

AC/DC Converters
DC/DC Converters
Easy to use power sources for Burr-Brown's converters amplifiers, etc.

Special Products

PCM A/D and D/A Converters for audio applications
Low distortion, high speed converters specified in audio terms

Military Products

D/A and A/D Converters
Multipliers
V/F Converters
Operational Amplifiers
All designed, manufactured to MIL-M-38510. Produced in a separate facility. Fully specified from -55°C to +125°C. 100% screened to MIL-STD-883, 10% PDA plus QCI.

Fiber-Optic Data Links

Transmitters/Receivers
Convert TTL or analog input to TTL outputs. Provide total noise immunity for accutrate signal transmission.

Data Entry and Display Terminals

13 Models - Numeric/Alphanumeric
RS-232-C and 20mA current-loop compatible

Microcomputer Compatible Analog and Digital Input/Output Boards

For Intel, DEC, Motorola, Zilog and others.

At Burr-Brown we put technology to work for you by selecting the most efficient, cost effective IC technology to meet a specific product performance goal. Our in-house facility produces superior thick and thin film hybrid IC's and multifunction monolithics under stringent quality control. You get high reliability products that deliver specified performance!

ADVERTISERS PRODUCT INDEX

This index shows the page and the line on that page of every device in the Master Selection Guide for manufacturers that have included detailed product information. It is organized alphabetically by manufacturer and for each manufacturer, alpha-numerically by device. Bold face listings lead to data on important products which has been supplied for you by the manufacturers.

how to use the product index

The Product Index includes many of the same references as the Part Number Index, but in this case the listings are sorted by manufacturer.

As in the Part Number Index, the model numbers are sorted alpha-numerically from **left** to **right**. Here the manufacturer's prefixes are included so that devices with alphabetic prefixes appear before those without them (i.e., LM101 would be before 1101). Application note pages are indicated by a ¶ sign and manufacturers' product information pages by a ☆ sign. The numbers preceding the dash are the page numbers, while those following the dash indicate the location of the device on the page.

When you use the Master to find data on a particular manufacturer's products, this index provides the fastest way to find all the information.

PRODUKT-VERZEICHNIS VON HERSTELLERN MIT EIGENEN DATEN-BLÄTTERN

Dieses Verzeichnis enthält die Seiten- und Zeilenangabe für jedes Produkt im Master Selection Guide, für das Hersteller ausführliche Produktinformationen übermittelt haben. Es ist alphabetisch nach Herstellern geordnet und, innerhalb jedes Herstellers, alphanumerisch nach Bauteilen. Eintragungen in Fettdruck verweisen auf Datenblätter wichtiger Produkte, die direkt vom Hersteller zur Verfügung gestellt wurden.

GEBRAUCHSANLEITUNG FÜR DAS PRODUKTVERZEICHNIS

Dieses Verzeichnis enthält viele gleichlautende Informationen wie im numerischen Typenverzeichnis, jedoch erfolgt hier die Auflistung nach Herstellern.

Wie beim Typennummern-Verzeichnis erscheinen die Bauteile in alphanumerischer Reihenfolge von links nach rechts. Die Kennbuchstaben der Hersteller sind jedoch mit enthalten, so daß Bauteile mit Buchstaben vor solchen ohne Buchstaben erscheinen (LM101 erscheint z.B. vor 1101). Die Seitennummern der Applikationsberichte sind durch ein ¶ Zeichen und Datenblätter von Herstellern durch ein ★ Zeichen angegeben. Die dem Trennstrich vorgestellten Zahlen sind die Seitenzahlen, die nachgestellten bedeuten die Zeile, in der das Bauteil auf der Seite zu finden ist.

Wenn Sie den Master benützen, um Kenndaten eines Produkts von einem bestimmten Hersteller zu finden, so geht es über dieses Verzeichnis am schnellsten.

INDEX DES PRODUITS FABRIQUES PAR LES SOCIETES AYANT PARTICIPE A LA COMPILATION DE CET OUVRAGE

Cet index indique à quelle page et à quelle ligne on a fait mention d'appareils fabriqués per les sociétés qui ont bein voulu inclure dans le Guide Général de Sélection des renseignements détaillés sur leurs produits.

Les fabricants sont énumérés par ordre alphabétique, et sous chaque nom se trouve une liste alphanumérique des produits. Les titres en caractères gras vous indiquent où trouver des renseignements sur des produits d'une certaine importance. Ces informations ont été fournies par les fabricants eux-mêmes pour votre usage personnel.

COMMENT SE SERVIR DE L'INDEX DES PRODUITS

Cet index comprend beaucoup de références apparaissant déja dans l'Index des Numéros de Pièces, il se singularise cependant par le fait que les renseignements sont donnés par fabricant.

Tout comme dans l'Index des Numéros de Pièces, les numéros de modéle sont classés alphanumériquement de gauche à droit. Dans ce cas là, les préfixes des sociétés fabricantes sont inclus de facon à ce que les produits avec préfixes alphabétiques apparaissent avant ceux qui n'en ont pas (par exemple LM101 se trouvera placé avant 1101). Pour renvoi, les numéros de page des notices d'application sont indiqués per le symbole (¶), et les numeros de page contenant les renseignements fournis par les fabricants par une étoile (☆). Les chiffres qui précèdent le titre sont les numéros de page, ceux qui suivent le titre indiquent à quelle ligne il a été fait mention du produit.

Lorsque vous utilisez le Guide pour trouver des renseignements sur les produits d'un fabricant donné, cet Index représente le moyen le plus rapide pour obtenir les renseignements nécessaires.

INDICE DEL PRODUCTO DE LOS PUBLICADORES

Este índice denota la linea y página de cada componente en la Guia Maestra de Selección para fabricantes que han incluído información detallada del producto. Está organizada en orden alfabético por fabricante, y para cada fabricante la pieza aparece en orden alfabético y numérico. Las letras más marcadas los conduce a datos de productos importantes suplidos por el fabricante.

MODO DE EMPLEO DEL ÍNDICE DEL PRODUCTO

El índice del Producto incluye muchas de las mismas referencias incluidas en el Indice del Número de Pieza, pero en este caso, la lista está ordenada por fabricante.

Así como en el Indice de Número de Pieza, los números de modelos están en orden alfabético y numérico de izquierda a derecha. Los prefijos del fabricante están includíos de tal manera que las partes con prefijos alfabéticos aparecen antes que las que no lo tienen. (Por ejemplo, LM101 estaría encima de 1101). Páginas con notas de Aplicaciones están identificadas por el símbolo ¶ y las páginas de información del producto del fabricante por el símbolo ☆. Los números que preceden al guión son el número de página, mientras que los que aparacen a continuación indican la ubicación de la pieza en la página.

Cuando usa la guía Maestra para encontrar datos sobre un producto en particular, este índice provee la manera más rápida de encontrar la información deseada.

広告掲載メーカー製品インデックス

このインデックスは各マスターセレクションガイドに記載されている詳細な製品情報をのせたメーカー全ての製品のページ数とそのページの行数を示しています。メーカーはＡＢＣ順に，製品はＡＢＣ順と若い数字順にのっています。太字で記載されている製品はメーカーがのせている主要機器のデーターがそこにのっていることを示しています。

使用法

製品のインデックスはパーツナンバーインデックスと同じですがここではメーカー毎に分類されています。パーツナンバーインデックス同様型番はＡＢＣ，若い数字順に左から右へ記載されています。ここではメーカーのプリフィックスがつけられており，アルファベットのプリフィックスが付いている製品がついていない製品の前になっています。（例えばLM101は1101より前に）アプリケーションノートページは　印で又メーカーの製品情報のページは☆印で示してあります。ダッシュ符号の前の数字はページ数，後の数字はそのページの製品の位置を意味します。

利用者皆様が特定メーカーの製品のデータを探される場合，このインデックスが一番速く情報を提供致します。

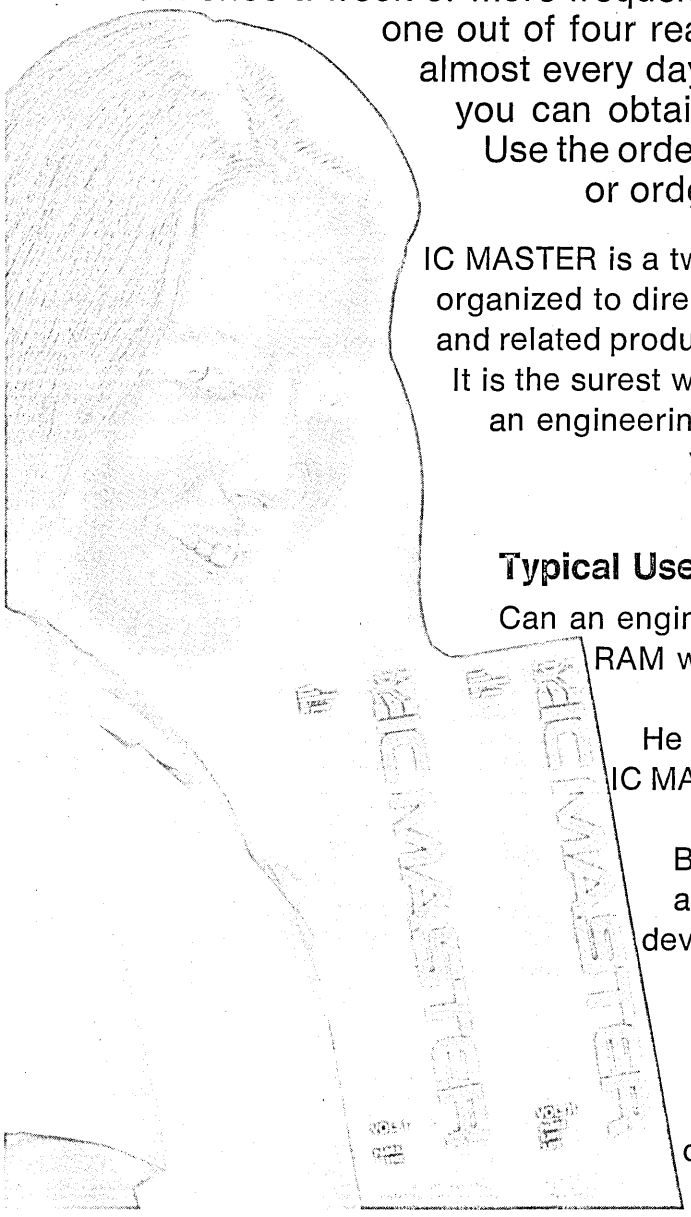
IC MASTER BELONGS ON YOUR BOOKSHELF; ORDER YOUR COPY NOW

A recent survey revealed that one out of two IC MASTER users refer to it once a week or more frequently. The survey also discovered that one out of four readers use IC MASTER every day or almost every day. If you use IC MASTER frequently, you can obtain your own copy by ordering now. Use the order cards contained in this publication, or order by telephone as described below.



IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest way to find the optimum device to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

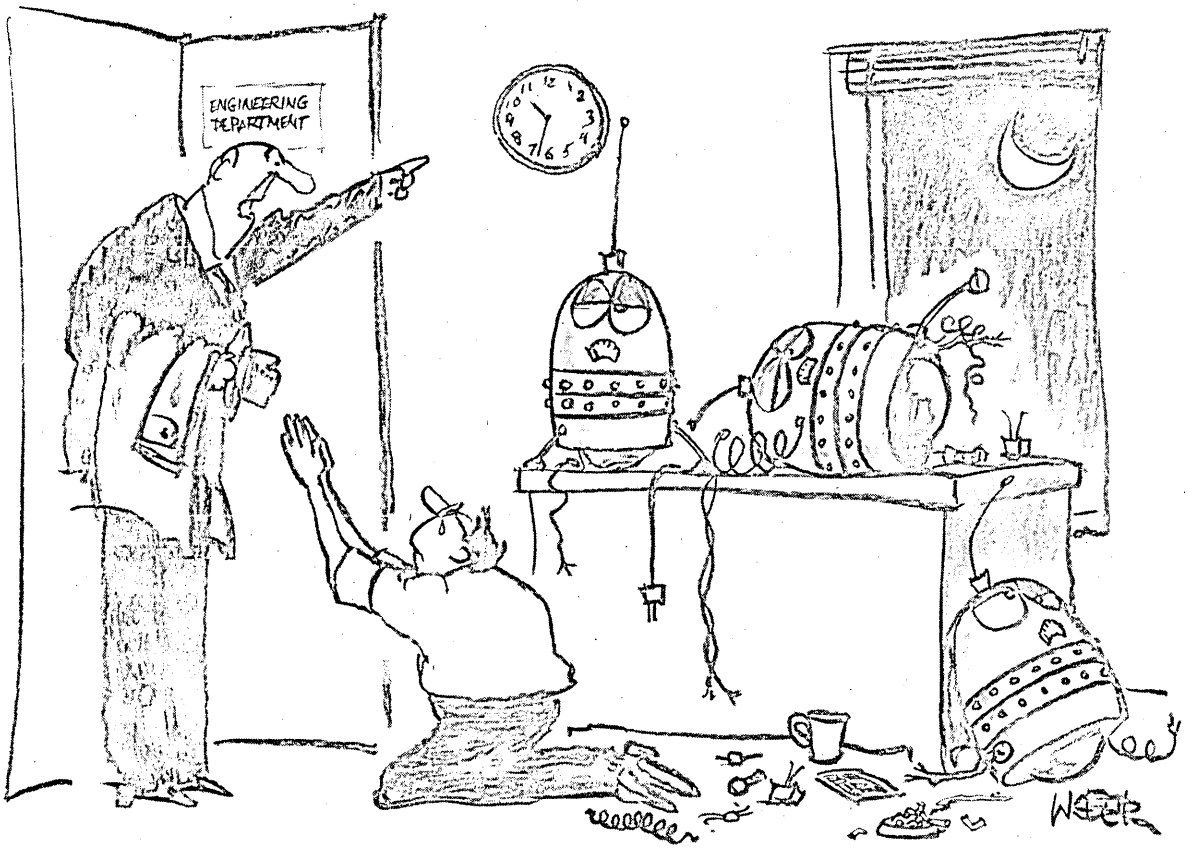
Typical Use of IC MASTER

Can an engineer find out who makes a 64K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 64K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.

In the United States only:

You can order IC MASTER simply by charging it to your VISA or Master Card credit card. To place your order, call now: (516) 222-2500. Ask for Extension 314.

GET HIGH TECHNOLOGY WITHOUT HIGH ANXIETY.



"DON'T GIVE ME EXCUSES ABOUT 'UNDELIVERED PARTS' McGINNIS! I WANT THESE ROBOTS COMPLETED AND READY FOR SHIPPING BY NINE O'CLOCK TOMORROW MORNING!"

ALTERNATE SOURCE DIRECTORY

The Alternate Source Directory is an industry-wide cross reference of those devices which manufacturers claim are pin-for-pin and functional equivalents to IC's made by other firms. It is a compilation of many individual references and shows literally thousands of alternates that are not implied by their model numbers, especially in the linear and memory areas. Unlike the usual alternate source guides, this directory leads you to many alternate sources for any particular device, not just one. Containing over 50,000 cross references, it is the most comprehensive alternate source directory ever published.

HOW TO USE THE ALTERNATE SOURCE DIRECTORY

The second column of this Alternate Source Directory shows devices which are replacements for those in the first column. Devices listed in **BOLD FACE** type have technical data in the Master Selection Guide. This information begins on the page listed to the right of the **BOLD FACE** part numbers. Products preceded by a ◇ have been discontinued by the manufacturer. This section does include devices not listed in the Master Section Guide; e.g., discontinued items, DTL and 54L devices.

In order to maintain this list within some reasonable bounds, the A and B suffixes indicating improved versions generally have been dropped. If this were not done, for example, every higher speed selection conjured up by a memory manufacturer would result in a device that could replace many equal or slower competitors and this directory would become highly involved in slight performance variations. Moreover, improved performance is only important if your circuits take advantage of it.

One of the difficulties with any cross reference is that devices meant to be alternates do not necessarily perform the same in all circuits. Thus, it will be necessary for you to check specifications, or even check circuit performance before deciding which alternates are right for you. A major benefit of this list is that it gives you more alternatives to study. But if you do not find what you need here, it may be possible to find additional alternates by locating the device in the Master Selection Guide. Particularly for digital circuits, the other products grouped with it will normally offer similar or identical performance.

VERZEICHNIS VON AUSTAUSCH-BAREN BAUELE-MENTEN

Das Verzeichnis von austauschbaren Bauelementen ist eine umfassende vergleichende Äquivalenzliste für die gesamte Halbleiterindustrie. Darin sind solche Bauelemente enthalten die, nach Herstellerangaben, nach Funktionen und Pinbelegung mit Typen anderer Hersteller voll austauschbar sind. Es ist eine Zusammenfassung von vielen Einzelangaben und enthält Tausende von Äquivalenztypen, die nicht aus den Typennummern hervorgehen, besonders im Linear- und Speicherbereich. Im Gegensatz zu üblichen Äquivalenzlisten bietet dieses Verzeichnis nicht nur eine sondern veile Alternativlösungen für jedes einzelne Bauelment. Mit über 50,000 Querverweisen ist es die umfassendste Referenzliste, die je veröffentlicht wurde.

GEBRAUCHSANLEITUNG FÜR DIE ÄQUIVALENZLISTE

Die zweite Spalte dieses Verzeichnisses enthält Bauteile, welche für die in der ersten Spalte austauchbar sind. Für Bauteile in Fettdruck finden Sie technische Daten im Master Selection Guide. Diese Information beginnt auf der Seite, die rechts neben den fettgedruckten Typennummern erscheint. Produkte mit einem vorgestellten ◊ Zeichen werden nicht mehr hergestellt. Dieser Abschnitt enthält auch Bauelemente, die nicht im Master Selection Guide aufgelistet sind, z.B. nicht mehr produzierte Teile, DTL und 54L Bauelemente.

Diese Auflistung wurde aus Hersteller-Empfehlungen erstellt. Nachdem jede Firma dazu neigt, nur sich selbst als Alternative zu den bekannten Herstellern zu nennen und größere Firmen kleinere gerne ignorieren, hat nicht jedes Bauelement seine jeweilige Entsprechung Daher sollten Sie, wenn Sie nach Alternativen für ein Bauteil einer weniger bekannten Firma suchen, zunächst die entsprechenden Aquivalenztypen nachschlagen, insbesondere wenn sie von größberen Firmen sind, und damit evtl. weitere Alternativen ausfindig machen.

Um diese Liste nicht zu umfangreich werden zu lassen, wurden die A- und B-suffixe, die verbesserte Versionen bezeichnen, in der Regel Weggelassen. Wäre dies nicht geschehen, dann würde z.B. jede Selektion nach höherer Geschwindigkeit, die von einem Speicher-Hersteller durchgeführt wurde, ein Bauelement ergeben, das viele gleichschnelle oder langsamere Versionen von anderen Herstellern ersetzen könnte, und diese Vergleichsliste hätte eine Vielzahl von Bauelementen, die sich nur ganz geringfügig voneinander unterscheiden. Darüber hinaus sind bessere Parameter nur dann wichtig, wenn Sie diese in Ihrer Schaltung zu Ihrem Vorteil nutzen können.

Eine der Schwierigkeiten, die bei jeder Aquivalenzliste auftreten, ist die, daß austauschbare Bauelemente nicht unbedingt in allen Schaltungen dieselbe Funktion erfüllen. Daher sollten Sei, bevor Sei sich für einen Aquivalenztyp entscheiden, alle Datenblätter genau prüfen oder sogar feststellen, ob das betreffende Bauelement in Ihrer Schaltung richtig arbeitet.
Ein großer Vorteil dieser Liste ist, daß sie noch mehr Alternativlösungen zur Prüfung anbeitet. Aber wenn sie hier nicht das finden, was Sie suchen, können Sie möglicherweise weitere Aquivalenztypen feststellen, wenn Sie das Bauelement im Master Selection Guide nachschlagen. Insbesondere bei Digital-ICs bieten die anderen dort mitaufgeführten Produkte normalerweise ähnliche oder identische Funktionen.

LE REPERTOIRE DES SOURCES ALTERNATIVES

Ce répertoire est un outil de référence utilisé largement dans toute l'industrie. Il permet de trouver quels sont les appareils qui, d'après leurs fabricants, sont les équivalents des circuits intégrés vendus par d'autres firmes. Cet ouvrage compile un nombre considérable de références individuelles, et offre littéralement des milliers de possibilités alternatives qui ne sont pas évidentes de par les numéros de modéle des appareils, particulièrement dans le cas des mémoires et des systèmes linéaires. A la difference des autres guides du même domaine, ce répertoire n'offre pas qu'une seule et unique source alternative pour un appareil, mais au contraire plusieurs. Il contient plus de 50,000 références et représente le Répertoire des Sources Alternatives le plus complet jamais publié a ce jour.

COMMENT SE SERVIR DU REPERTOIRE DES SOURCES ALTERNATIVES

La deuxieme colonne de ce répertoire fournit une liste de produits capables de remplacer ceux énumérés dans la première colonne. Les produits écrits en gros caractères sont étudiés en detail dans le Guide Général de Sélection — se reporter à la page indiquée à la droite des numéros de pièces marqués en gras. Les produits précédés du signe (◊) ne sont plus en fabrication. Cette Section comprend des appareils qui n'apparaissent pas dans le Guide Général de Sèlection, tels que les appareils qui ont été discontinués, les DTL et les 54L.

Cette liste a été conçue en fonction des renseignements fournis par les fabricants. Il est cepedant relativement bien connu que chaque fabricant estime être le seul sur le marché à pouvoir produire des appareils équivalents à ceix des grands fournisseurs, et que, d'autre part, les gros fournisseurs ont tendance a ignorer les petits. Cet état d'esprit explique pourquoi il est impossible de fournir des équivalents de remplacement pour chacun des appareils énumérés.

Si vous recherchez des sources alternatives pour un appareil provenant d'une société qui n'ait pas une renommée mondiale, nous vous conseillons de prendre les produits de remplacement que vous pourrez trouver, notamment s'ils proviennent de fabricants bien connus, et d'ensuite consulter ce Répertoire pour trouver des sources alternatives possibles.

Afin de maintenir cette liste dans certaines limites, les suffixes A et B indiquant des versions plus puissantes ont généralement été ignorés. Cela pour éviter qu'un fabricant ayant conçu un système mémoire avec possibilitié de sélection à plus grande vitesse, se trouve en concurrence directe avec des sociétés équivalentes ou plus petites. Ce Répertoire deviendrait alors trop spécialisé dans des différences de performance minimes. D'autre part, une meilleure performance n'est importante que si vos circuits en profitent.

L'un des problèmes que l'on rencontre dans tout système de renvoi est que des appareils dits alternants ne vont pas obligatoirement avoir les mêmes performances sur tous les circuits. Il vous sera donc nécessaire avant de decider quels vont être les alternants que vous allez utiliser, de vérifier les spécifications ou même les performances du circuit. L'un des avantages de cette liste est qu'elle vous procure énormément d'appareils alternants. Au cas ou vous ne pourriez trouver dans cette Section ce dont vous avez besoin, nous vous conseillons de consulter le Guide Général de Sélection. Dans le cas des circuits digitaux, en particulier, les produits énumérés dans chaque groupe offrent généralement des performances similaires ou identiques.

DIRECTORIO DE FUENTES ALTERNAS

El Directorio de Fuentes Alternas es una referencia entre componentes usado ampliamente en la industria en la cual los fabricantes mantienen que provee estilo constructivo de terminales en los circuitos Integrados (IC) fabricados por otras compañías. Es una compilación de muchas referencias individuales y muestra literalmente miles de equivalentes alternas que no son obvias por su número de modelo, especialmente en las areas de lineal y memoria. En vez de las guías de fuentes, el alterno usual, este directorio los refiere a muchas fuentes alternas para cualquier componente, no solamente una. Con un contenido de 50,000 referencias de componente-a-componente es el directorio publicado más completo.

MODO DE EMPLEO DEL DIRECTORIO DE FUENTES ALTERNAS

La segunda columna de este Directorio de Fuentes Alternas muestra componentes que pueden reemplazar a los de la primera columna. Componentes que aparecen con letras oscuras tienen especificaciones técnicas en la Guía Maestra de Selección. Esta información empieza en las página que aparece a la derecha sel número de la parte en letras oscuras. Los productos acompañados por un (◊) han sido descontinuados por el fabricante. Esta sección si incluye componentes que no aparecen en la Guía Maestra de la sección; en otras palabras, artículos descontinuados, DTL y 54L.

Esta lista ha sido compilada por medio de recomendaciones de los fabricantes. Debido a que hay una tendencia a que cada compañía se muestre así misma como alterna a los fabricantes más prominentes, y que los fabricantes mayores ignoren a los mas pequeños, no cada componente hace referencia de uno a otro; de tal manera que, si usted busca alternos para una compañía menos conocida, obtenga los substitutos que encuentre, más que nada si son producto de compañías prominentes, y luego refiérase a ellos para encontrar otras fuentes.

Con objeto de mantener esta lista bajo un control razonable, los sufijos A y B que denotan mejoras, no aparecen. Si esto no se hubiese hecho, por ejemplo, cada selección de memorias de alta velocidad resultaría en una componente que podría substituir otras de igual velocidad o más lentas y este directorio terminaría dando mucha importncia a cambios insignificantes en el funcionamiento de ellos. Además, una mejora en las características solo es importante si sus circuitos lo requieren.

Una de las dificultades con cualquier referencia es que componentes que tienen como propósito ser equavalentes no necesariamente tienen el mismo rendimiento en todos los circuitos. Debido a esto, será necesario que usted determine las especificaciones, o inclusive determine las características del circuito antes de decidir que equivalente es mejor para usted. Un beneficio de esta lista es que le provee alternativas que investigar. Pero si no encuentra lo que necesita aquí, es aún posible encontrar equivalentes encontrando la componente en las Guía Maestra de Selección. En particular para circuitos digitales, los otros productos agrupados con aquel, le ofrecerá un funcionamiento igual o parecido.

代替ソース
ダイレクトリー

このダイレクトリーはメーカーが他とピンコンパチブルか機能的に互換性があるという製品の全業界のクロスリファレンスです。これは個々のリファレンスを多数を編集したものであり，文字通り数千の型名からは全く分らない特にリニアとかメモリといった分野で数千の代替品を記載しています。

通常の代替品がガイドと異り，このダイレクトリーは特定品種について一社丈でなく数社の代替品を記載しています。50,000のクロスリファレンスがありこれ程広くカバーしたクロスリファレンスは本書が初めてです。

使用法

第二欄は第一欄の代替品を示しています。太字で印刷されている製品はマスターセレクションガイドにデータがのっている事を示します。そのページは太字印刷の型名の右側に書いてあります。◇印が前についている製品はメーカーが生産中止した事を示します。このセクションにはマスターセレクションガイドにのっていない，生産中止した製品例えばＤＴＬとか５４製品とかも記載しています。このリストはメーカーの推せんに従って作られたものです。各メーカーにある傾向ですが自社丈が本当の代替ソースと主張したり大手は中小メーカーを無視したりするので全ての製品が互い互いに全製品にクロスリファレンスされてはいない。ですからもし利用者皆様が小さなメーカーの代替品を探す時は皆様が先ず代替品を見つけ，大手メーカーがそれを作っていればそこを調べて代替メーカを探し当てる方法をとった方が良いでしょう。

このリストをある納得されうる限界にしておく為に改良品につけられるＡとかＢとか云ったサフィックスは通常つけてありません。もしつけてあるとメモリーメーカーが主張する高速セレクションが同等かスピードの遅い製品メーカーの製品を数多く取換えてしまう結果にもなるでしょうし，このダイレクトリーが少々の性能の違いに相当の比重をかけなくてはならないようになってしまいます。更に云えば改良性能はそれを充分に利用する回路丈にしか必要ないのです。

クロスリファレンスを作る難しさの一つは代替とされる製品が応々にして全ての回路で同性能でないと云うことです。この為利用者皆様は性能表を調査するか決定する前にどの代替が回路に合うかを回路で調査されることをおすすめします。このリストの良いところは皆様に多くの代替ソースがあることを知って頂く事です。もし皆様がこのセクションで見つけられなかった場合は，マスターセレクションガイドからも見つけることが出来ます。特にディジタル回路はグループ毎の他社製品は通常似かよったあるいは同一の性能を持っています。

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

	Signetics	LF355	

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

California Devices

HC10000	AMI	UA-5	
	LSILogic	LC10000	

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

Harris Semiconductor (Cont'd)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

Hitachi America, Ltd. (Cont'd)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

Motorola Semiconductor Products (Cont'd)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

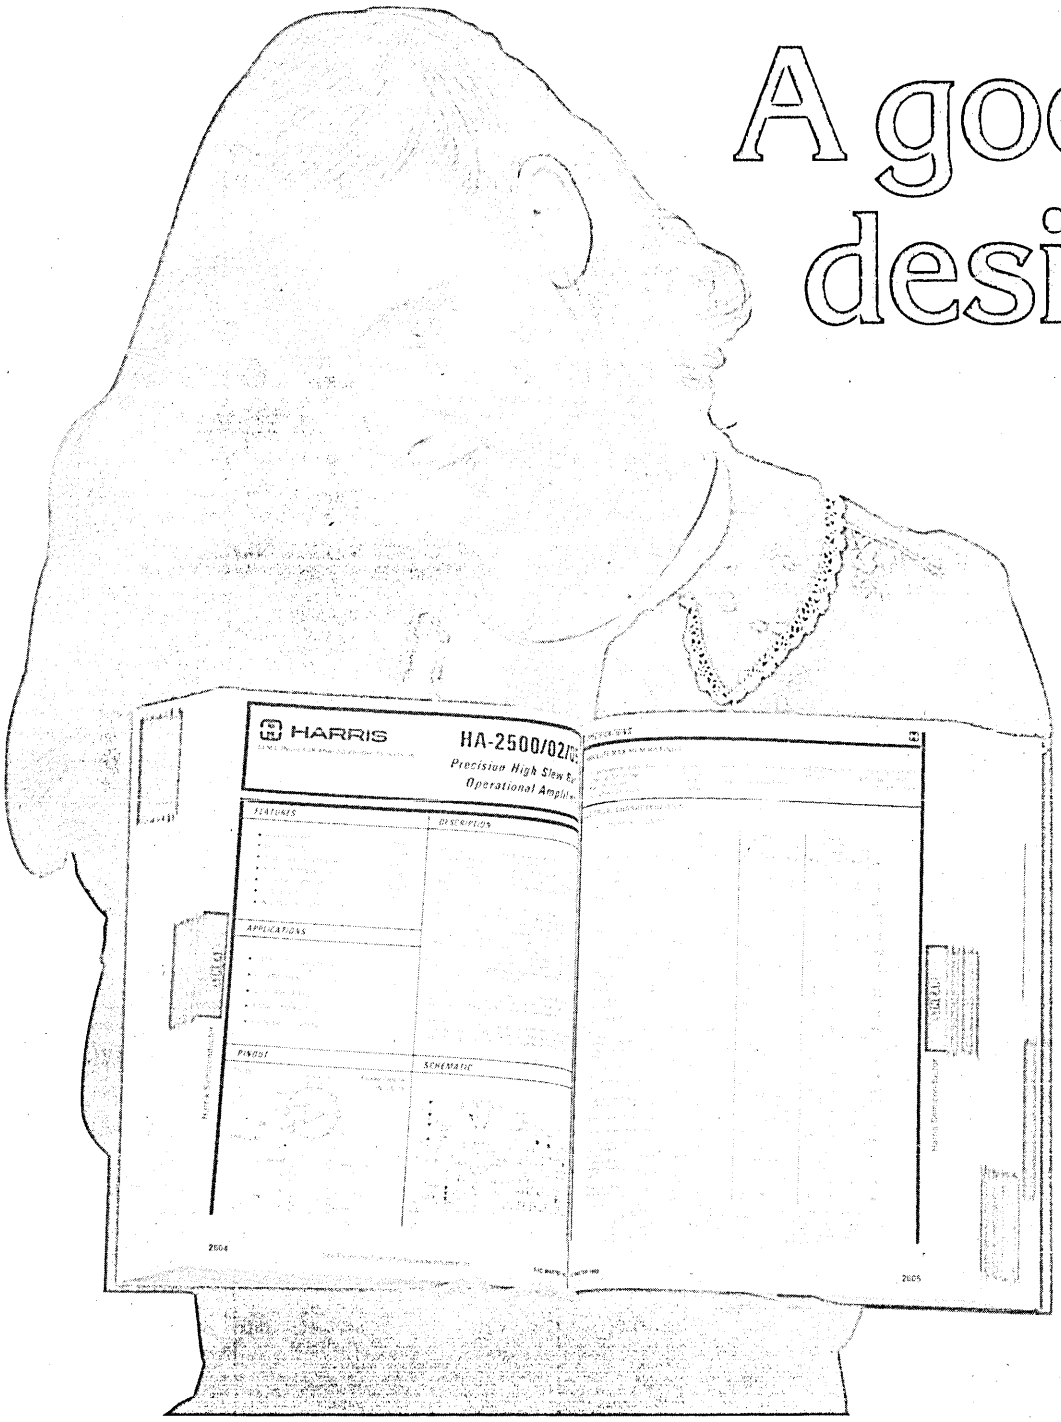
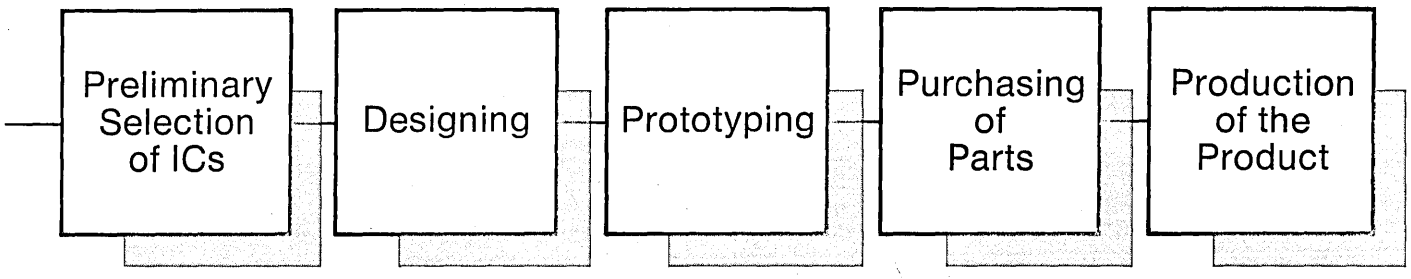
SIX KEY PHASES OF NEW SYSTEM DEVELOPMENT

Planning

A good design





is "mastered" early.

When is the best time for an engineer to pick the integrated circuits that will go into his next design?

The best time is at an early stage in the design process when the engineer's plans are still flexible enough to take full advantage of the features selected.

There is a point in the early phases of every design when engineers focus on selecting integrated circuits. Specifications are examined, relative strengths and weaknesses of various devices are weighed, and the field of candidates is chosen. This is the critical time in the design cycle when designers want to be sure the right devices are in serious contention for their applications.

It is at this moment that the engineer reaches into his technical reference library. Of the material on his shelves, **IC MASTER** is the only reference source that has been especially prepared for this moment.

The engineer can look up each precise function that he needs and see all of the devices and their manufacturers that might satisfy his requirements. He sees this information for all manufacturers, not just for advertisers. But if an IC maker has chosen to include technical data for his products in **IC MASTER,** the engineer sees each index listing for that manufacturer in **bold face type** accompanied by the **page number** on which the data appears; the engineer can then turn immediately to the advertiser's technical data and see if the device fits his needs.

Next time, begin with the MASTER.

◊ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

National Semiconductor (Cont'd)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◇ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.
